~~SPACE PROPULSION~~

## TECHNOLOGY REQUIREMENT SOURCES

### NASA Office of Space Flight, Office of Space Science & Applications

e.g., OSF's "Mission User Technology Needs & Applications"  
Note: ETO & SCET Basic WBS Structure Match "Top 3" Items

### Development-Stage and Flight Programs

e.g., NLS/STME Critical Task-by-Task Applicability Review  
Status: ETO/SCET 3-day Program Review in March 1991,  
NLS/STME Response in April 1991, Follow-up Meetings  
Underway at Present

### Special Assessments of NASA and Its Programs

- o SSTAC/ARTS & NRC/ASEB Propulsion Program Review Feedback
- o Augustine and Synthesis Group Reports:  
(Transportation & Propulsion Related Recommendations)

### Mission/Vehicle/Propulsion Planning-Visibility Studies (See later chart)

IV/SA

## OSF Technology Requirements Evaluation

### NASA Program Unique Technologies

- |   |   |
|---|---|
| 1 | Vehicle Health Management                   |
| 2 | Advanced Turbomachinery Components & Models |
| 3 | Combustion Devices                          |
- 4 Advanced Heat Rejection Devices
  - 5 Water Recovery & Management
  - 6 High Efficiency Space Power Systems
  - 7 Advanced Extravehicular Mobility Unit Technologies
  - 8 Electromechanical Control Systems/Electrical Actuation
  - 9 Crew Training Systems
  - 10 Characterization of Al-Li Alloys
  - 11 Cryogenic Supply, Storage & Handling
  - 12 Thermal Protection Systems for High Temperature Applications
  - 13 Robotic Technologies
  - 14 Orbital Debris Protection
  - 15 Guidance, Navigation & Control
  - 16 Advanced Avionics Architectures

### Industry Driven Technologies

Signal Transmission & Reception  
Advanced Avionics Software  
Video Technologies  
Environmentally Safe Cleaning Solvents, Refrigerants & Foams  
Non-Destructive Evaluation

Office Of Space Flight

~~SPACE PROPULSION~~

## SYNTHESIS GROUP

### Key Propulsion-Related Findings/Recommendations

#### General

- o Require Earth-to-Orbit, Interplanetary Transfer and Descent/Ascent Propulsion for Crew and/or Cargo Service

#### Chemical Propulsion

- o Hydrocarbon/Oxygen Propulsion for Boost-stage Applications e.g., F-1 Engines (as updated)
- o Hydrogen/Oxygen Propulsion for Space-stage Applications e.g., Upgraded J-2 Engines, NLS/STME
- o NASP X-30 "...should be vigorously pursued." i.e., hypersonic airbreathing
- o SDIO SSTO concept "...should be carried forward to demonstrate feasibility." i.e., advanced configuration hydrogen, oxygen rockets

#### Nuclear Propulsion

- o Nuclear Thermal Rockets, "... with further development, are the choice propulsion technology for the interplanetary phase of the Mars mission."
- o Nuclear Electric Propulsion, "...where transit time is not an important constraint, low thrust nuclear propulsion systems are attractive because of their very high performance levels..."

~~OAET~~

~~SPACE PROPULSION~~

## NEW/ETO & SCET

### **INTEGRATED MISSION/VEHICLE/PROPULSION PLANNING-VISIBILITY STUDIES**

#### Advanced Manned Transportation Systems (AMLS)

- o LaRC Vehicle Analysis Branch, Space Systems Division
- o Fully Reusable TSTO & SSTO, All-Rocket & Airbreathing

#### Heavy Lift Transportation Systems (HLLV)

- o GD/SRS via MSFC Program Development
- o Boost-stage Propulsion, H<sub>2</sub>/O<sub>2</sub>
- o All-rocket Candidates (SSME Ref.): IME, Plug Nozzle, Full-flow S/C, Split-Expander, etc.

#### Advanced Upper-Stage Systems

- o Martin-Marietta/Aerojet via MSFC Propulsion Lab
- o IME Focused, H<sub>2</sub>/O<sub>2</sub> (Incl. SCET transfer, planetary applications)

SPACE PROPULSION

## CASE-IN-POINT AUGMENTATION OPPORTUNITY

**SUBJECT:** Applying Emerging Materials Technology to a Turbopump

**Specific Example (ETQ):** Fiber-Reinforced Ceramic Matrix Composite Turbine

**Engineering Benefits:** C/SiC Blades survive 50 thermal shock cycles to 3300 F

**Existing Program:** Phase I (GE, Rocketdyne) Feasibility Study completed, Phase II (Rocketdyne) Materials Characterization, Sample Component Fabrication & Test, & Technology Implementation Plan presently underway (44-month effort)

*Plan is to fab and test a representative (static) turbine nozzle ring (only)*

**Proposed Augmented Program:**

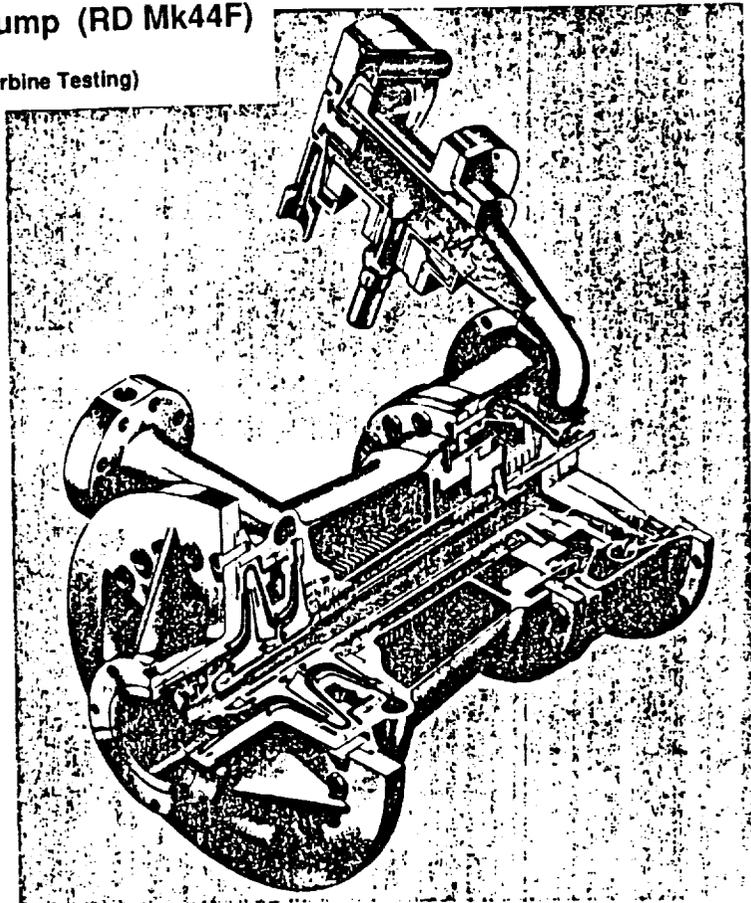

*Using existing LH2 Turbopump (Mk44F), fab nozzle ring and turbine wheel, checkout in hot-gas facility, then install in complete turbopump and run (LeRC)*

**What Does Augmentation Buy?**

- o Accelerates effort into full-scale subsystem operating-environment evaluation
- o Leverages well timewise on other Government-sponsored work (e.g., IHPTET)
- o Provides readiness for overall engine test/flight applications by FY96
- o Contractor team willing to cost share/Government facility gains new capabilities
- o Keeps U.S. competitive internationally (vs. France's SEP, Japanese work)

### Liquid Hydrogen Turbopump (RD Mk44F)

(Proposed for Ceramic Composite Turbine Testing)

# SPACE PROPULSION TECHNOLOGY

~~OAET~~

~~SPACE PROPULSION~~

## EXPANDING THE FOCUSED TECHNOLOGY PROGRAM PURVIEW

Example: Combined-Cycle (airbreathing/rocket) Propulsion

1990 SSTAC/ARTS Recommendation (vis-a-vis ETO Program):

"... our Group recommends that the current charter of the effort be enlarged to include combined-cycle propulsion."

Actions Taken (not necessarily totally ETO instigated):

- o Langley's Vehicle Analysis Branch has now examined airbreathing as well as all-rocket ETO systems assuming both available and improved materials availability (e.g., that accorded to NASP X-30)
- o Headquarters (ARC/Eagle) is conducting special international hypersonics propulsion activities (assessing combined-cycle work being pursued in France, Germany, U.K., U.S.S.R and Japan)
- o ETO Program plans to conduct a Rocket-Based Combined-Cycle (RBCC) SSTO focused Workshop via University of Alabama in Huntsville (there) in November 1991 (FY 91 & 92 supported grant)

# SPACE PROPULSION TECHNOLOGY

~~OAET~~

~~SPACE PROPULSION~~

## SPECIAL INITIATIVE (ETO shared sponsorship)

Operationally Efficient Propulsion System Study

- o 3-year assessment: Rocketdyne KSC/Cal Team (for KSC)
- o NLS/OSF-MD/OAET-RP Shared Funding (2nd Year just completed)
- o Canvassed Shuttle and ELV Launch Teams Re: "non-operability"
- o Defined 25 Leading Operability Problems; Technological Remedies for each now documented
- o "Rethought" ALS Boost-stage Propulsion System (as example)  
Arrived at IME configuration (vs. standalone engines) for improved operability  
(this design also is estimated to be superior in terms of reliability, complexity, weight and production costs)
- o Have now evolved a quantifiable Operability Index (OI: 0 to 1.0)
- o Plan to focus on Space-basing challenge next (SCET to track)

# SPACE PROPULSION TECHNOLOGY

~~OAET~~

~~SPACE PROPULSION~~

## NEW/ETO & SCET

### **COOPERATIVE - AGREEMENT PROGRAMS w/ INDUSTRY (Low-Cost Commercial ELV Focus)**

#### Hydrodynamic (Foil-type) Bearing Testing

- o Allied Signal/LeRC (SCET)
- o LH2 & LN2 (sim. LO2) Bearing Rig Tests (Completed)
- o Allied Signal/MSFC (ETO)
- o LO2 Materials Compatability and Rig Tests (in Planning)

#### Low-Cost Thrust Chamber Testing

- o TRW/LeRC (ETO)
- o LH2/LO2 Operation (Hardware-build stage; Fall 1991 Testing)

#### Turbopump Testing

- o Allied Signal/LeRC & MSFC
- o LH2 & LO2 Operation (Discussion stage)

# SPACE PROPULSION TECHNOLOGY

~~OAET~~

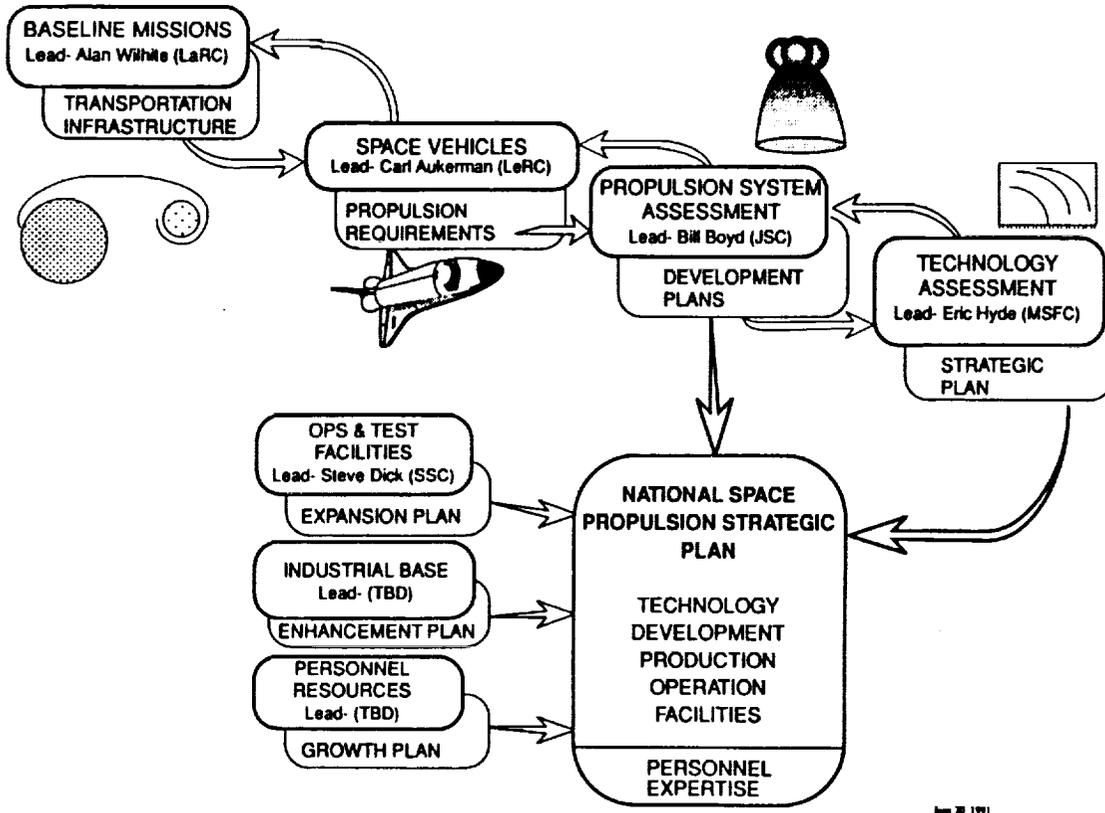

~~SPACE PROPULSION~~

## **SPACE PROPULSION SYNERGY GROUP**

### **A National Level Space Propulsion Technology Developer/User Forum**

- o Sustains the Considerable Momentum of the Penn State Symposium (June 1990)
- o All Propulsion-related NASA (now) and DoD (shortly) Offices and Centers aboard
- o Propulsion and Space Vehicle Industry and university community being invited in
- o Attempting a Vision of the Space Propulsion Future (e.g., via Strategic Planning)
- o Looking for "Smarter, Better" Ways of Doing Space Propulsion Business
- o Making Developers Aware of User Needs; Involving Users in Technology Planning
- o Recognition that our Space Propulsion Institutions Need Rejuvenation (How?)
- o Broad cross-section of NASA/DoD with comon interests -- achieving balanced representation of technologists, systems developers and systems operators
- o Catalyst for free thinking and innovation: cultural change must be achieved

# R & T BASE PROGRAM ELEMENTS

~~DAEF~~

~~SPACE PROPULSION~~

## Low-Thrust Propulsion (LeRC/JPL)

*Goal: For a variety of chemical and electric propulsion applications, to create a technological base toward increasing component life, reliability and performance, while decreasing program risk and life-cycle costs.*

Augmentation Objectives: [Theme: Assure Readiness for Technology Transfer]

- o Accelerate Advanced Earth-storable Rocket Applications
- o Provide Mission-tailored Space Storable Rocket Capabilities
- o Develop Integrated H<sub>2</sub>/O<sub>2</sub> propulsion systems (Vehicles & Platforms)
- o Provide Advanced Electric Platform Station-keeping Propulsion
- o Demonstrate Ion Engine readiness for SEP & Robotic NEP Flight Tests

# R & T BASE PROGRAM ELEMENTS

~~DAEF~~

~~SPACE PROPULSION~~

## Advanced Propulsion Concepts (LeRC, JPL)

*Goal: For long-range, high-risk/payoff propulsion concepts of all kinds, to accelerate aggressive feasibility studies and proof-of-concept experiments to provide mission-oriented programs a firm basis of confidence to select new kinds of propulsion systems technologies for focused development.*

Augmentation Objectives: [Theme: Expand Concepts, Researcher Pool]

- o Identify and Experimentally Explore High Energy-Density Propellants
- o Develop and Life Test Electroless Electric Thrusters
- o Demonstrate Beamed-Energy Feasibility
- o Evaluate Fusion/Anti-Proton Propulsion
- o Demonstrate Multi-MWe High-Performance Plasma Propulsion
- o Demonstrate Carbon-60 Molecular Ion Propulsion

# R & T BASE PROGRAM ELEMENTS

~~OAET~~

~~SPACE PROPULSION~~

## High-Thrust Chemical Propulsion (LeRC, MSFC, JSC)

*Goal: In the generic analysis/design tools, combustion-device, turbo-machinery and integrated controls and monitoring arenas, to identify and explore, through feasibility studies, code development and critical experiments, "quantum-leap" opportunities to advance the overall Earth-to-orbit and Space Chemical Propulsion state-of-the-art.*

Augmentation Objectives: [Theme: Broaden, Deepen and Accelerate]

- o Expand modeling efforts and code development in the subsystem areas and initiate systems-level work, e.g., toward full engine dynamic operational simulation (Example: a Reliability Predictor)
- o Explore Innovative Injector/Combustor/Nozzle Concepts and Provide for High-Fidelity Performance-Predictive Capabilities
- o Innovate Advances in Turbopump Elements, Components and Subsystems Toward Major Reliability and Operability Improvements (Example: High-Temperature Superconducting Magnetic Bearings)
- o Open the Way to all-pervasive Propulsion Health Management and Intelligent Control Capabilities (e.g., Prognostics, Sensor Self-check) including VHM Interfacing
- o Attack Non-Engine Propulsion System Problem Areas and Advocate Potential Solutions to Users

# R & T BASE PROGRAM ELEMENTS

~~OAET~~

~~SPACE PROPULSION~~

## Cryogenic Fluid Management (LeRC, MSFC)

*Goal: To Complement Focused Technology and Flight-Test Programs with Validated Analytical Models and small-scale test data to meet future subcritical cryogen storage and handling design challenges (e.g., Zero-g Venting, Years-duration Cryogen Maintenance)*

Augmentation Objectives: [Complement and Underpin Focused Efforts]

- o Develop Pertinent Thermofluid Models for Subcritical Cryogens in Space and Validate with Small-scale Laboratory Experiments
- o Achieve Fundamental Understanding of the Role Gravity/No-Gravity Plays in Subcritical Cryogen Containment and Handling Systems
- o Make Available Improved Thermal Insulation and, if Feasible, Active Refrigeration Technologies (toward zero-loss containment)
- o Pursue New Gauging Techniques and Sensor/Network Concepts
- o Address Space-environment Subcritical Cryogenic Fluid Storage and Supply, Transfer and State-assessment Problems and Develop Hardware Solutions to be Ultimately Verified in the Cryo Fluid Systems focused Program and in adequate-scale Flight Testing (viz., CONE)

# R & T BASE PROGRAM ELEMENTS

~~DAEP~~

~~SPACE PROPULSION~~

## Lunar and Planetary Propellants (LeRC, JPL)

*Goal: Provide a Verified Technological Strategy for Reaping the Large Logistical Benefits of Utilizing Indigenous Extraterrestrial Energy Materials and Propellants*

Augmentation Objectives: [Theme: Monitor In-Situ Resource Utilization Efforts/Initiate Work Later]

- o Focus on Probable Requirements and Mission Payoffs of Indigenous Lunar and Planetary Propellants Production and Utilization
- o Identify and Critically Assess the Enabling Technologies
- o Experimentally Explore Key Production and End-use Processes (Example: Test LO2/Al "Monopropellant Slurry" in Engine)
- o Explore Ramifications of Terrestrial Energy Use of Indigenous Planetary Energy Resources (e.g., Lunar He3)

Work Breakdown Structure

## FOCUSED PROGRAM ELEMENTS

~~AET~~

~~SPACE PROPULSION~~

### Earth-to-Orbit (ETO) Propulsion Technology (MSFC, LeRC)

*Special Note: Augmentation refers to "Strategic" funding plan; "X" is presently identical to "Current"*

*Goal: For all Engine Subsystem areas to Provide Advanced Test-Validated Analysis and Design Tools, Materials and Fabrication Processes, and Hardware/Software-Specific New Technologies such that Next-generation ETO Propulsion Systems can be more promptly and systematically developed at significantly lower risk and cost, while being more reliable and operable than current systems, all without compromising performance*

Augmentation Objectives: [Theme: Expand the Time-Horizon and Purview]

- o Increase the Relevance and "Technology Products" Contribution of the Combustion Device, Turbomachinery and ICHM work-areas to both Ongoing and Planned New ETO (+ in-space) Propulsion Systems
- o Redouble Program efforts to mechanize Large-scale Experimental Subsystem Validation Thrusts in Combustion Devices and Turbomachinery areas; complete/operate MSFC "SimLab" (ICHM)
- o Expand Program purview into the "beyond-engine" Propulsion System Arena, e.g., Technology for both Ground and Flight components such as zero-leak connections and disconnects (Poor-operability "pull")
- o Increase Program technical coverage to include promising non-traditional propulsion systems, e.g., Hybrid and Combined-cycle (airbreathing/rocket) Propulsion (requires systems studies)

## FOCUSED PROGRAM ELEMENTS

~~AET~~

~~SPACE PROPULSION~~

### Advanced Cryogenic Engines (Space Chemical Engine Technology, SCET) (LeRC, MSFC)

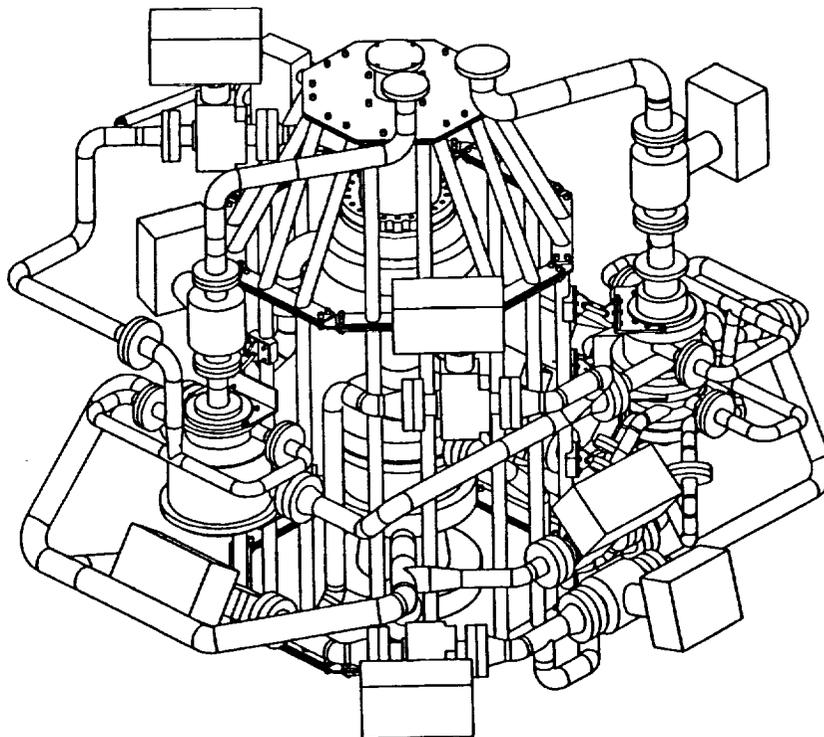

*Goal: "Restore to Health" this just-initiated and ambitious Program which was funding-decimated in association with the FY 1991/92 SEI-program budgets as actually realized (vs. planned).*

Augmentation Objectives: [Theme: Reaccelerate AETB while reparallelizing full component technology-advancement by entire propulsion community]

- o Restore AETB contract/government-facility operations to earlier pace and level-of-effort (Contemplate a second AETB?)
- o Via NRA (already developed for release) promptly establish a component/subsystem technology-advancement program effort
- o Initiate efforts on integrated modular engine (IME) versions of SCET applications
- o Better synergize Program taskwork with Base R&T and non-SCET program elements, e.g., Cryogenic Fluid Systems, ETO, Nuclear Thermal Propulsion Programs

# ADVANCED EXPANDER TEST BED

SPACE CHEMICAL ENGINE TECHNOLOGY (SCET) PROGRAM  
[Advanced Cryogenic Engine]

~~DAET~~

~~SPACE PROPULSION~~

## Commercial Vehicle Propulsion (MSFC, LeRC, JSC)

*Note: Presently worked under CSTI Booster and ETO, and SCET Programs*

Goal: Responsively to COMSTAC recommendations to NASA, to meet Commercial ELV technology needs both near term (existing technology/services) and for new-design low-cost systems (advanced technology)

Augmentation Objectives: [Theme: Work both *immediate* retrofit-type engineering and out-year new-design enabling technologies]

### Immediate/Near-Term (1-3 years to transfer)

- o Analysis and Design Tools, Fabrication Processes
- o Low Pc Thrust Chambers (e.g., advanced ablatives)
- o Low-Costs, simplified Turbopumps & Pressurization

### Longer Term (4-7 years to transfer)

- o IME, Advanced Nozzles, Expander-cycle at High Thrust
- o Hybrid Solid/Liquid Propulsion for Booster and Upper-stages

# SPACE PROPULSION TECHNOLOGY

~~OAET~~

~~SPACE PROPULSION~~

## COMSTAC KEY PROPULSION NEEDS

(Commercial Space Transportation Advisory Committee)

1. Low Cost Liquid Booster Engines - LO2/LH2 (New Expander Cycle)
2. Low Cost Liquid Booster Engines - Hydrocarbon (Evolutionary)
3. Hybrid Propulsion Strap-On Boosters With Transition to High Regression Rate Non-Oxidized Fuel
4. Advanced Low Cost LO2/LH2 Upper Stage Engine (30-50K Lbs Thrust)
5. Advanced Low Cost LO2/LH2 Upper Stage Engine (100-200K Lbs Thrust)
6. Leak Free Tubing and Ducts
7. Low Cost Pressure Fed Engine & Turbopump Technology
8. Clean Burning Solid Motor Technology
9. Improved LOX/RP-1 and Storable Derivative Engine Components

~~OAET~~

~~SPACE PROPULSION~~

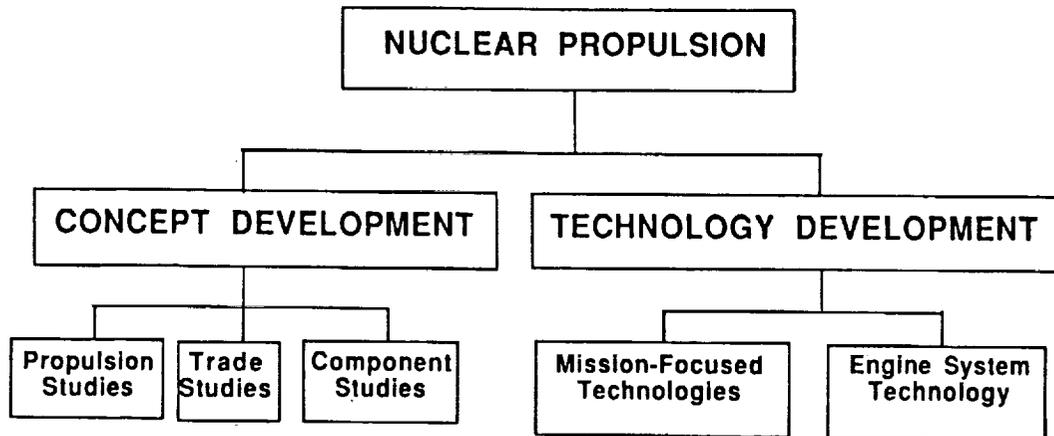

## Cryogenic Fluid Systems (LeRC, MSFC)

*Goal: Closely coordinating with all NASA and other Government related efforts, develop test-verified cryogenic fluid containment and handling technologies as required for extended spaceflight as, and when needed for development.*

Augmentation Objectives: [Theme: Maximizing Collateral Support, Achieve Needed Technology Readiness for Spaceflight and Surface-based Systems]

- o Develop to the technology-readiness stage advanced Cryogenic Insulation systems (e.g., "thick MLI", MLI + foam)
- o Perfect both one-g/zero-g subcritical Fluid Transfer and zero-g control techniques
- o Accurately model Cryo-fluid slosh characteristics for operating systems and develop design criteria for effective slosh-control techniques
- o Establish generically applicable Cryo-servicing Facility design criteria and hardware-acquisition guidelines
- o Document comprehensive Thermal and Pressure-control, Liquid Supply and Handling, and fluid-transfer design/operating guidelines (Dependent on successful conclusion of CONE and CONE flight tests)

# NUCLEAR PROPULSION WBS

## FOCUSED PROGRAM ELEMENTS

~~OAET~~

~~SPACE PROPULSION~~

### Nuclear Thermal Propulsion (NTP) (NASA\*, DOE, DoD)

\*NASA Center Involvement: LeRC, MSFC, JSC

*Special Note: Except 1997+, "Strategic", "3X" and "Current" funding plans for NTP are identical*

*Goal: Capitalizing on the significant national NTP hardware-demonstrated background (e.g., NERVA), a multi-agency technology investment, seeking out innovative approaches, will develop a state of technology readiness for initiating the development of an NTP system for human missions to Mars.*

Augmentation Objectives: [Theme: National program, building heavily on past achievements and current innovation, will achieve a viable system]

- o Achieve a safe, reliable and high-performance nuclear propulsion system technology base predicated on past accomplishments
- o Seek innovative approaches for improving the NTP S.O.A.
- o Achieve a Government + Public consensus supporting the safe use of Nuclear Propulsion in space as being feasible/acceptable
- o (NASA) Coordinate with DOE and DoD (including appropriate Agency and National Laboratories) to maximize use of total national expertise and physical resources (e.g. test facilities)
- o Conduct a phased, focused NTP technology development and verification program which remains flexibly responsive to Mars precursor and manned missions

## FOCUSED PROGRAM ELEMENTS

~~OA/ET~~

~~SPACE PROPULSION~~

### Nuclear Electric Propulsion (NTP) (NASA\*, DOE, DoD)

\*NASA Center Involvement: LeRC, JSC, JPL

*Special Note: Except 1997+, "Strategic", "3X" and "Current" funding plans for NTP are identical*

*Goal: Capitalizing on the significant national hardware-related ongoing nuclear space power efforts (e.g., SP-100), a multi-agency technology investment, seeking out innovative approaches, will develop a state of technology readiness for initiating the development of an NEP system for missions to Mars*

Augmentation Objectives: [Theme: National program, building heavily on current space nuclear power and innovation, will achieve a viable system]

- o Achieve a safe, reliable and high-performance nuclear electric propulsion system technology base predicated partly on ongoing developments
- o Seek innovative approaches for improving the NEP S.O.A.
- o Achieve a Government + Public consensus supporting the safe use of Nuclear Propulsion in space as being feasible/acceptable
- o (NASA) Coordinate with DOE and DoD (including appropriate Agency and National Laboratories) to maximize use of total national expertise and physical resources (e.g. test facilities)
- o Conduct a phased, focused NEP technology development and verification program which remains flexibly responsive to Mars precursor and manned missions

## FOCUSED PROGRAM ELEMENTS

~~OA/ET~~

~~SPACE PROPULSION~~

### Spacecraft On-Board Propulsion (LeRC, JPL)

*Goal: Provide Dual-mode (NTO/N2H4) Propulsion for Planetary Missions*

Augmentation Objectives: [Theme: Readiness for Planetary Missions]

- o Demonstrate dual-mode "hot rocket" and advanced tankage

### Station-keeping Propulsion (LeRC, JSC)

*Goal: Provide Integrated H2/O2 + Resistojet Capabilities for Platforms*

Augmentation Objectives: [Theme: Enable logistics, operations benefits]

- o Demonstrate H2/O2 Thrusters & Low-pressure electrolysis
- o Demonstrate Single Resistojet for Waste water and gas

### Auxiliary Propulsion (JSC, LeRC)

*Goal: Provide Integrated (common-propellant supply) auxiliary propulsion*

Augmentation Objectives: [Theme: System & Operations simplification]

- o Demonstrate radiation-cooled Earth- & Space Storable thrusters
- o Provide complete-system technologies for integrated system

# TECHNOLOGY FLIGHT EXPERIMENTS

~~OAET~~

~~SPACE PROPULSION~~

## ***Cryogenic Orbital Nitrogen Experiment (CONE) (LeRC, MSFC)***

***Goal:*** Acquire low-g Flight Data needed for Design Tool validation for LO2 and LN2 Pressure-control, Liquid Acquisition and Transfer-system transportation and platform applications; extrapolate to at least partially validate LH2 applications

**Augmentation Objectives:** [Theme: LN2 & LO2 Flight-data Validation]

- o Assess effectiveness of passive pressure control
- o Acquire low-g data for active pressure control system
- o Demonstrate 100:1 reduction in mixer power (active control)
- o Demonstrate effective zero-g liquid acquisition devices (LAD)
- o Demonstrate no-vent fill, and rapid venting and safing
- o Explore zero-g tank chilldown, LAD efficiency and autogenous pressurization
- o Extrapolate to pressure-control, LAD and transfer of LH2

# TECHNOLOGY FLIGHT EXPERIMENTS

~~OAET~~

~~SPACE PROPULSION~~

## ***Cryogenic Orbital Hydrogen Experiment (COHE) (LeRC, MSFC)***

***Goal:*** Acquire low-g Flight Data needed for Design Tool validation for LH2 Pressure-control, Liquid Acquisition and Transfer-system transportation and platform applications

**Augmentation Objectives:** [Theme: LH2 Systems Flight-Data Validation]

- o Validate predictive analysis tools for liquid withdrawal (LADs)
- o Establish criteria and efficiency of no-vent fill
- o Demonstrate effectiveness of insulation systems & components
- o Demonstrate capability to meet system-safety criteria
- o Provide test-proven autogenous pressurization in transfer
- o Demonstrate flight-qualified mass gauging in zero-g operation
- o Establish effectiveness of passive pressure-control

# TECHNOLOGY FLIGHT EXPERIMENTS

~~OAET~~

~~SPACE PROPULSION~~

## **SOLAR ELECTRIC PROPULSION (LeRC, JPL)**

Goal: *Demonstrate Feasibility of SEP via Flight Test*

Augmentation Objectives: [Theme: Evolutionary Risk/Cost to Acceptance]

- o Launch on Delta ELV
- o APSA PV Panels (1-2 kWe) with Two Propulsion Types
  - "Derated" Xenon Ion Thruster and Low-Power H2 Arcjet
  - Subscale Cryo H2 Container (Mod. Orbiter PSRA Tank)
- o Planned Schedule/Costs through Launch
  - Ion: 42 Months, \$8.1M
  - Arcjet 48 Months, \$14.7M

~~OAET~~

~~SPACE PROPULSION~~

## **REVIEW QUESTIONS**

- o Is the program content/approach correct?
- o Is the level of investment correct?
- o Given the available funding are the priorities correct?
- o Is the user interface being properly coordinated?
- o Are the efforts being properly coordinated?
- o Are the participants correct?
- o Is the R&T Base content innovative enough to provide improved capability for future user/mission applications?
- o Does the R&T Base activity maintain or enhance NASA's technical capabilities?

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. This is essential for ensuring the integrity of the financial data and for providing a clear audit trail. The records should be kept up-to-date and should be easily accessible to all relevant parties.

2. The second part of the document outlines the procedures for handling incoming payments. It is important to ensure that all payments are received in full and that the correct amount is recorded. Any discrepancies should be investigated immediately and reported to the appropriate authority.

3. The third part of the document describes the process of issuing invoices. Invoices should be issued promptly and accurately, reflecting the actual goods or services provided. It is also important to ensure that the correct tax information is included on all invoices.

4. The fourth part of the document discusses the process of reconciling the accounts. This involves comparing the company's records with the bank statements to ensure that they match. Any differences should be investigated and resolved as soon as possible.

5. The fifth part of the document outlines the procedures for handling outgoing payments. It is important to ensure that all payments are made to the correct party and that the correct amount is paid. Any discrepancies should be investigated immediately and reported to the appropriate authority.

# LOW THRUST PROPULSION

SPACE PROPULSION TECHNOLOGY DIVISION

## LOW THRUST PROPULSION

### OBJECTIVE

PROVIDE TECHNOLOGIES FOR A BROAD RANGE OF FUTURE SPACE SYSTEMS

- SPACECRAFT
  - PLANETARY
  - EARTH-ORBITAL
- LARGE SPACE SYSTEMS
  - SPACE STATION
  - TENDED
- VEHICLES
  - EARTH-TO-ORBIT
  - ORBIT TRANSFER

CD-90-47460

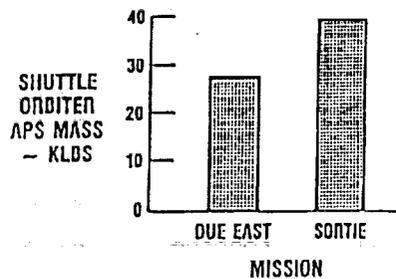

# STATE-OF-ART LOW THRUST PROPULSION

## MISSION IMPACTS

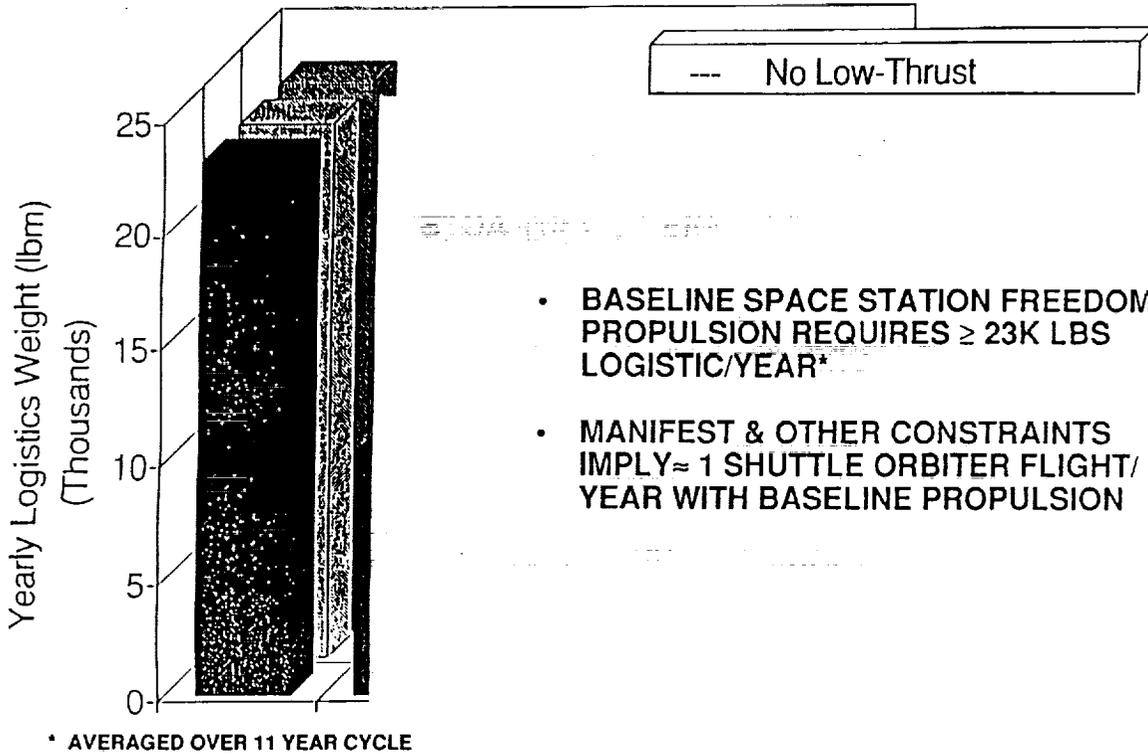

- LOW EARTH ORBIT (LEO):
  - ORBITER APS
  - SPACE STATION
- GEOSYNCHRONOUS (GEO):
  - TRANSFER ORBIT (GTO)
  - SATELLITES
- PLANETARY

## LOW THRUST PRIMARY AND AUXILIARY PROPULSION

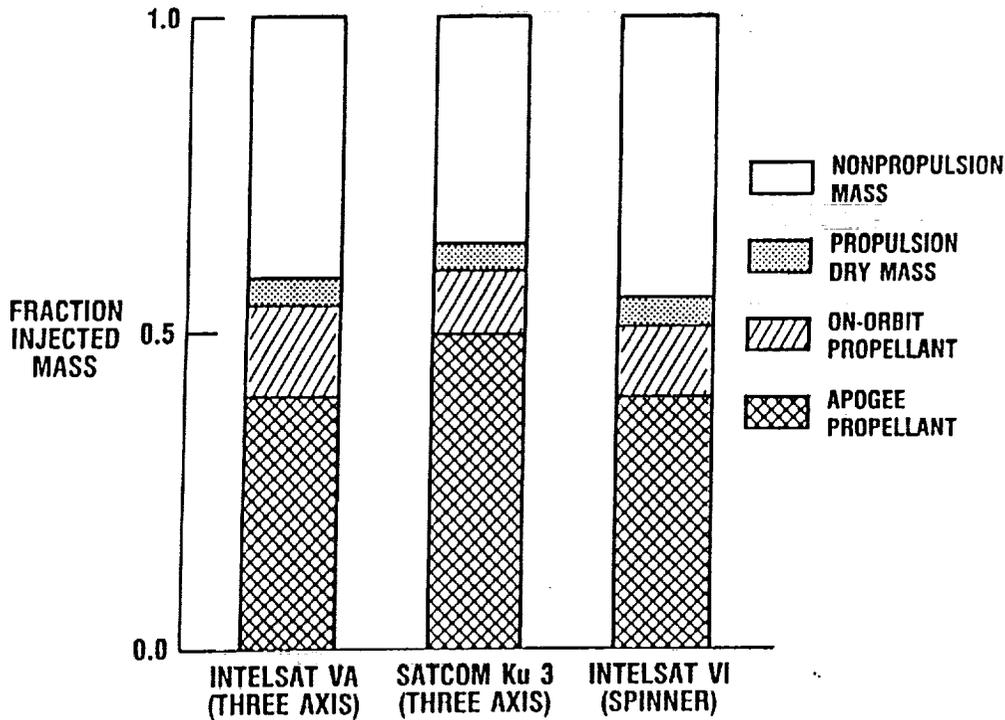

### APS OFFERS MAJOR LEVERAGE

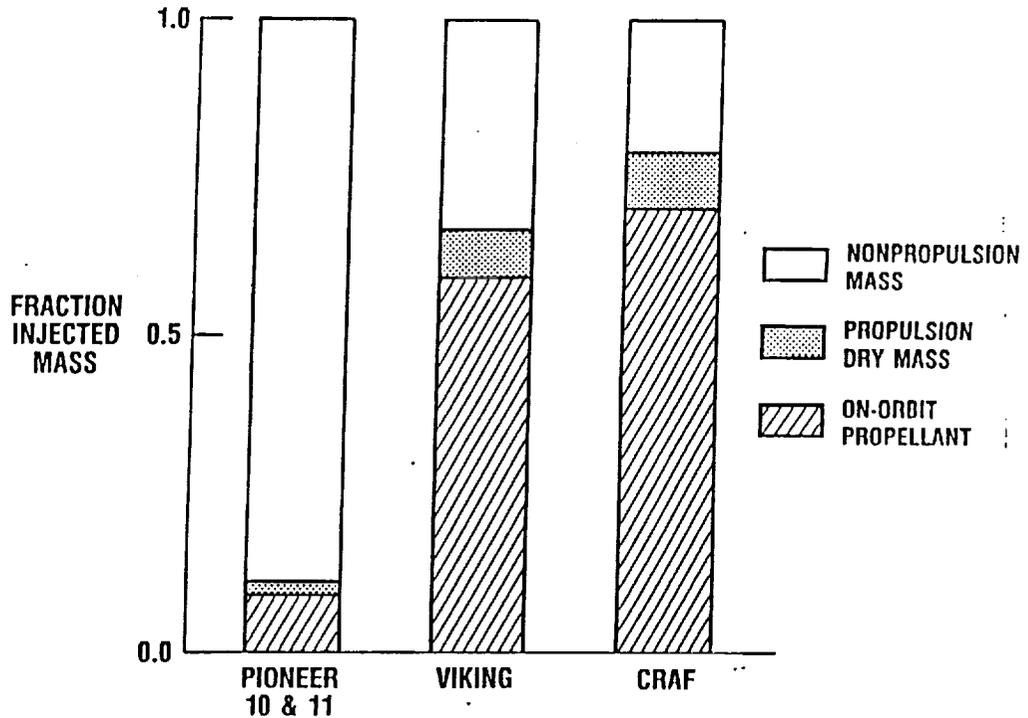

- APS MASS IS 11.4% TO 10.6% OF ORBITER

**GEOSYNCHRONOUS TRANSFER ORBIT MASS FRACTIONS FOR RECENT COMMUNICATIONS SATELLITES**

## PLANETARY SPACECRAFT INJECTED MASS FRACTIONS

**STATE -OF-ART**  
**LOW THRUST PROPULSION**  
**MISSION IMPACTS**

### LEO

- 12-19% OF ORBITER DELIVERED MASS (> 50% OF PAYLOAD)
- ~ ORBITER/YEAR FOR SPACE STATION LOGISTICS

### GEO

- 55-65% OF MASS DELIVERED TO GTO
- ON-ORBIT LIFE LIMITER

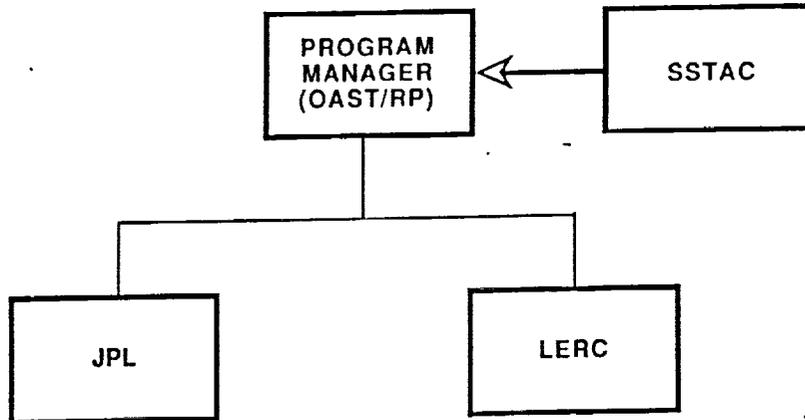

### PLANETARY

- OVER 80% OF INJECTED MASS FOR PLANNED MMII MISSIONS

**IN-SPACE FRACTIONAL MISSION PENALTIES**  
**REDUCED ONLY BY IMPROVED IN-SPACE PROPULSION**

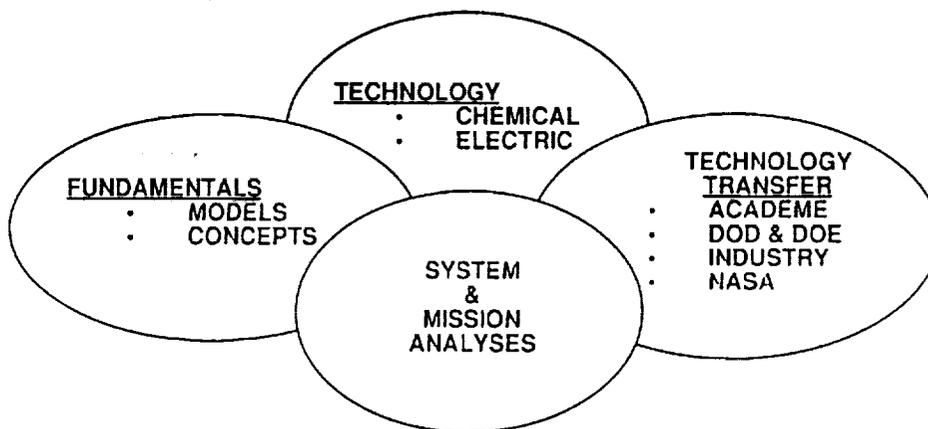

# LOW THRUST PRIMARY & AUXILIARY PROPULSION

**MANAGEMENT STRUCTURE**  
506-42-31

## LOW THRUST PROPULSION

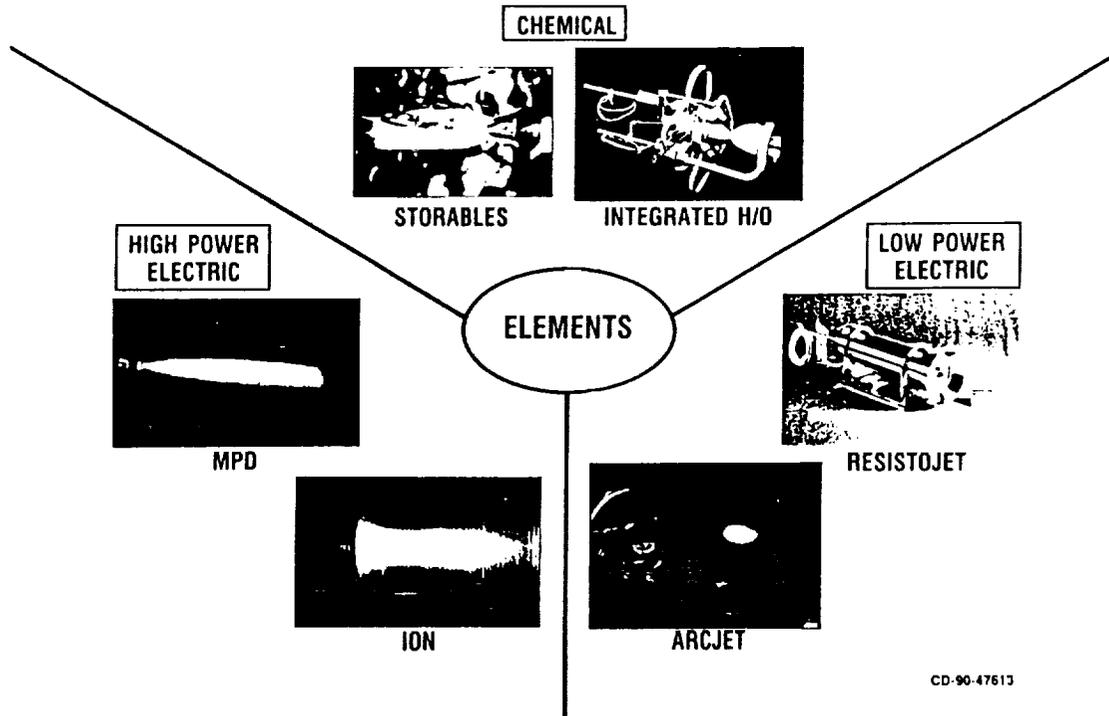

### PROGRAMMATIC APPROACH

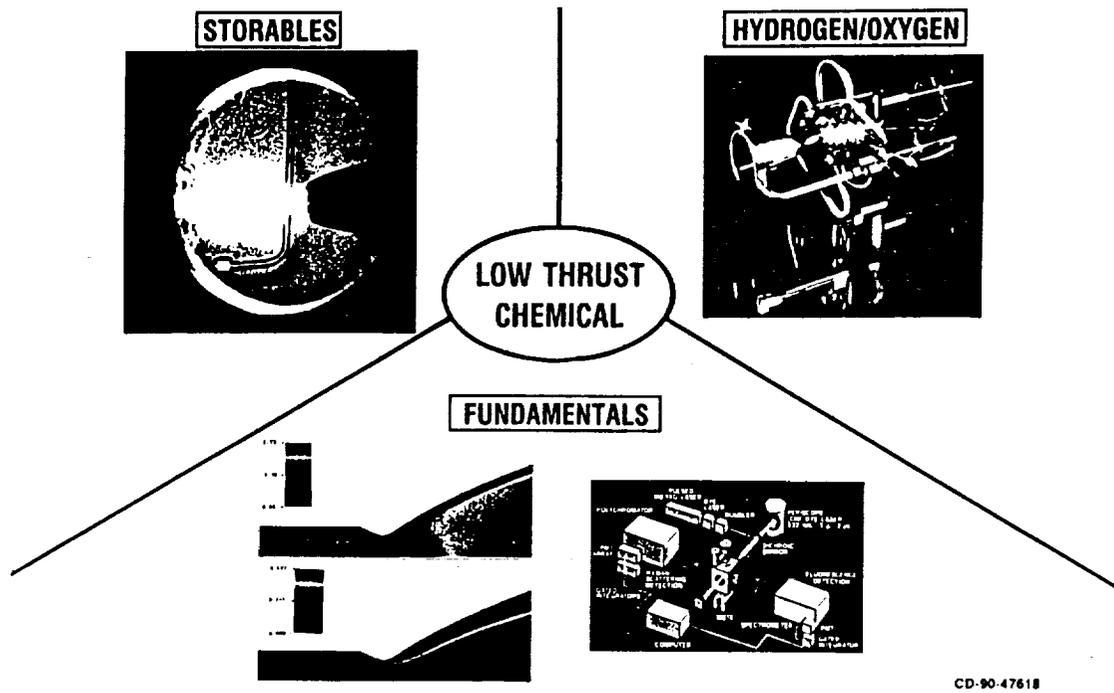

**PROGRAM STRUCTURED TO SUPPORT:**

- TECH TRANSFER & APPLICATIONS VERSUS TIME
- MAJOR BENEFITS FOR FUTURE MISSIONS

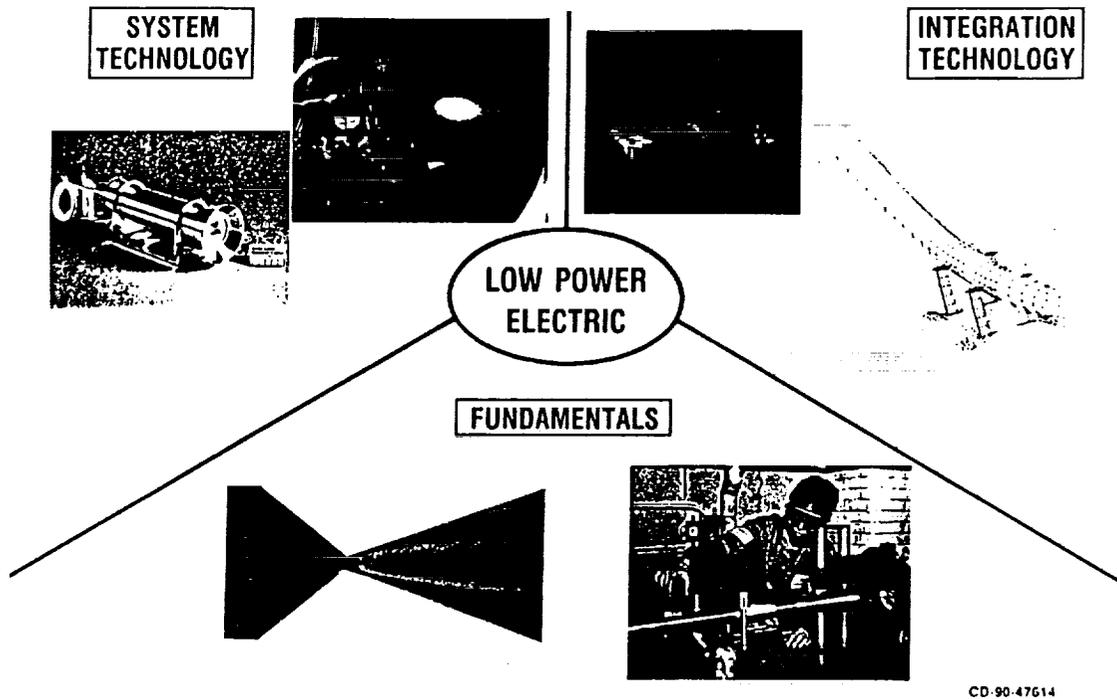

# LOW THRUST PROPULSION

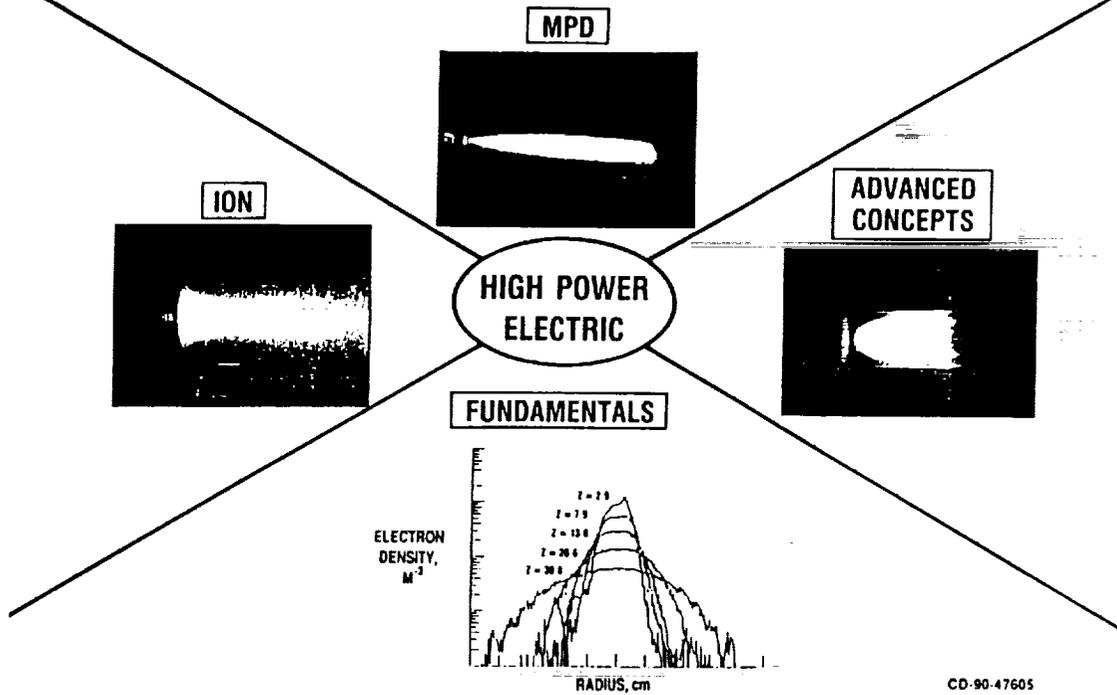

# LOW THRUST PROPULSION

# LOW THRUST PROPULSION

# LOW THRUST PROPULSION

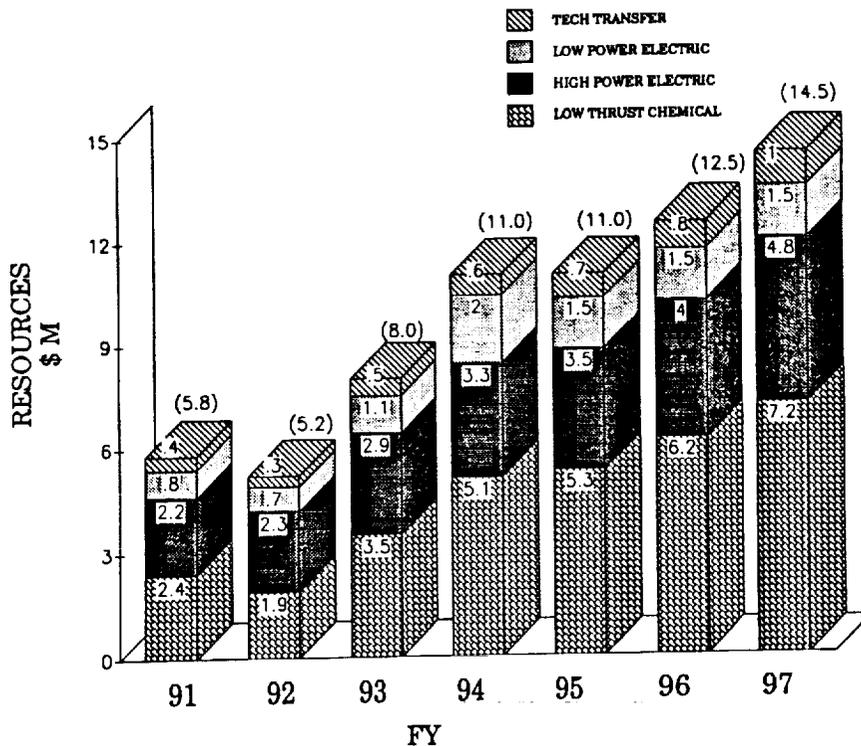

# TECHNOLOGY TRANSFER

**Significant Launch Mass Reductions  
Are Possible Using Electric Propulsion**

- Electric Propulsion Reduces the LEO Launch Mass by 18 to 42 Percent
- A 300-kW SEP System Provides the Best Trip Time Performance
- Centaur Injection Is Replaced With Low-Thrust Escape

**MBAR TRAJECTORY WITH SOLAR ELECTRIC PROPULSION ENABLES FIVE ASTEROID RENDEZVOUS PER MISSION**

- FIVE ASTEROIDS CAN BE VISITED ON THE SAME MISSION WITH ELECTRIC PROPULSION; ONLY ONE ENABLED WITH NTO/MMH
- EXAMPLE ASTEROID TOUR INCLUDES:
  - 4 – VESTA (90 days)
  - 17 – THETIS (60 days)
  - 103 – HERA (60 days)
  - 206 – HERISLIA (60 days)
  - 77 – FRIGGA (TO EOM)

## NEP MISSION VS BALLISTIC - KEY EXPECTED IMPROVEMENTS

FLIGHT TIME      PAYLOAD MASS      SCIENCE

### 1) NEPTUNE ORBITER/PROBE

- SHORTER FLIGHT TIME - 11 YRS VS > 18 YRS
- TRITON SCIENCE - ORBITER MISSION VS 41 FAST FLYBYS (4-5 KM/S)
- RING SCIENCE - POSSIBLE TO SPIRAL INWARD TO RING ZONE
- ATMOSPHERE SCIENCE - OBSERVATION FROM CLOSE (E.G. 3 R<sub>N</sub>) ORBIT

### 2) PLUTO ORBITER/PROBE

- ORBITER MISSION VS FAST (13 KM/S) FLYBY FOR BALLISTIC MISSION
- SPIRAL INWARD AS LOW AS DESIRED
- RENDEZVOUS WITH CHARON
- DEPLOY NEPTUNE LANDER OR PROBE
- SHORTER FLIGHT TIME, 10.5 YEARS
- NEP IS ENABLING (BALLISTIC MODE TAKES > 36 YRS TO DO ORBITER)

### 3) JUPITER GRAND TOUR

- ORBITER MISSION FOR CALLISTO, GANYMEDE, EUROPA AND IO (IF RADIATION PROBLEM CAN BE TACKLED)
- DEPLOYMENT OF SOME LANDERS OR PENETRATORS

## NEP MISSION VS BALLISTIC - KEY EXPECTED IMPROVEMENTS (CONTINUED)

### 3) MULTIPLE ASTEROID RENDEZVOUS

- MINIMUM OF SIX RENDEZVOUS WITH PREFERRED ASTEROIDS (SIZE, TYPE) VS ONE MAJOR TARGET PLUS ONE OR TWO SMALL TARGETS OF OPPORTUNITY
- ON AN AVERAGE OF ONE RENDEZVOUS EVERY TWO YEARS VS ~ ONE EVERY 4 YEARS

### 4) JUPITER POLAR ORBITER

- ADVANTAGE EXISTS IN LARGE PAYLOAD - POTENTIAL FOR MULTI-SPACECRAFT FIELDS AND PARTICLES EXPERIMENTS

### 5) COMET NUCLEUS SAMPLE RETURN

- BETTER PERFORMANCE AND ACCESSIBILITY TO LARGER NO. OF COMETS (MORE OPPORTUNITIES)
- PRESERVATION OF SAMPLE
- LOWER APPROACH SPEED WHEN RETURNING TO EARTH (V<sub>∞</sub>=0 km/s)
- IF ALLOWED TO SPIRAL BACK INTO EARTH THEN ORBITAL SAMPLE RECOVERY INSTEAD OF HIGH VELOCITY (V<sub>∞</sub>=15km/s) DIRECT ENTRY

## LOW THRUST PROPULSION

- **ESSENTIAL FOR SPACE MISSIONS**
  - **EARTH SPACE**
  - **PLANETARY**
- **PREDOMINANT LAUNCH & SPACE VEHICLE "PAYLOAD"**
- **HI LEVERAGE TECHNOLOGIES DEFINED**
  - **INITIAL TRANSFERS ACHIEVED**
- **BROAD & MAJOR BENEFITS ASSURED WITH SUPPORT:**
  - **SPACECRAFT**
  - **PLATFORMS**
  - **TRANSPORTATION**

# ADVANCED PROPULSION CONCEPTS

Presented to the  
Integrated Technology Plan External Review

54-81  
157471  
p. 18

June 26, 1991

Joel C. Sercel

Advanced Propulsion Systems Group  
Jet Propulsion Laboratory

## ADVANCED PROPULSION CONCEPTS

### OBJECTIVES

#### PROGRAMMATIC

ESTABLISH THE FEASIBILITY OF PROPULSION  
TECHNOLOGIES FOR VASTLY EXPANDED SPACE ACTIVITY

#### TECHNICAL

REVOLUTIONARY PERFORMANCE SOUGHT:

- ~1kg/kW specific mass
- Specific impulse tailored to mission requirements
- Ability to use in-situ resources
- Round-trips to Mars in months
- Round-trips to outer planets in 1 to 2 years
- The capability for robotic missions beyond the solar system

### SCHEDULE

- 1991 COMPLETE FIRST ECR PLASMA ENGINE THEORY
- 1992 MEASURE CARBON-60 ION PROPERTIES
- 1992 TEST 25-KW ELECTRODELESS ROCKET
- 1993 TEST SUPERSONICALLY-HEATED  $\mu$ WAVE ROCKET
- 1994 RESOLVE KEY PLASMA PLUME PHYSICS ISSUES
- 1995 TEST SUSTAINED MW-CLASS PLASMA ROCKET
- 1996 PROVE LIFE/PERFORMANCE OF C-60 ION ENGINE
- 1996 SUSTAIN CONFINEMENT OF ATOMIC HYDROGEN
- 1997 APPLY MICRO-FISSION DEMONSTRATION TO ICAN  
FISSION/FUSION PROPULSION FEASIBILITY ISSUES
- 004+ LABORATORY SCALE ATOMIC HYDROGEN ROCKET
- 004+ 10 MW-CLASS PLASMA ENGINE & S.S.  $\mu$ WAVE ROCKET
- 004+ ICAN SYSTEM PROOF-OF-CONCEPT
- 004+ 100 KW GROUND-TO-SPACE PHASE CONJUGATE BEAM

### RESOURCES (\$M)

	CURRENT	3X	STRATEGIC
1991	1.2	1.2	1.2
1992	1.4	1.4	1.4
1993	1.5	3.2	3.5
1994	1.5	4.0	4.0
1995	1.6	4.7	4.7
1996	1.6	5.0	5.0
1997	1.7	6.0	6.0

### PARTICIPANTS

#### JPL

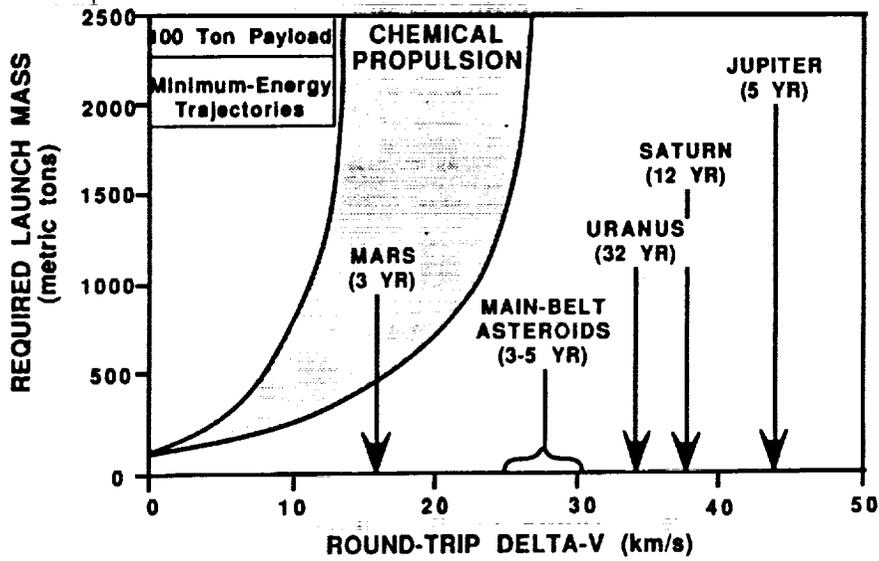

- ECR PLASMA ENGINE
- C-60 MOLECULAR ION THRUSTER
- SUPERSONICALLY-HEATED MICROWAVE ROCKET
- TANDEM MIRROR PLASMA ROCKET
- COMPUTATIONAL PLASMA PHYSICS
- MICRO FISSION/FUSION (ICAN) PROPULSION
- PLASMA PLUME PHYSICS RESEARCH
- SYSTEMS ANALYSIS

#### LeRC

- MW-CLASS PLASMA ROCKET
- E-M FIELD/PLASMA INTERACTIONS
- ELECTRODELESS ROCKETS
- BEAMED ENERGY FOR PROPULSION
- ATOMIC HYDROGEN

# ADVANCED PROPULSION CONCEPTS

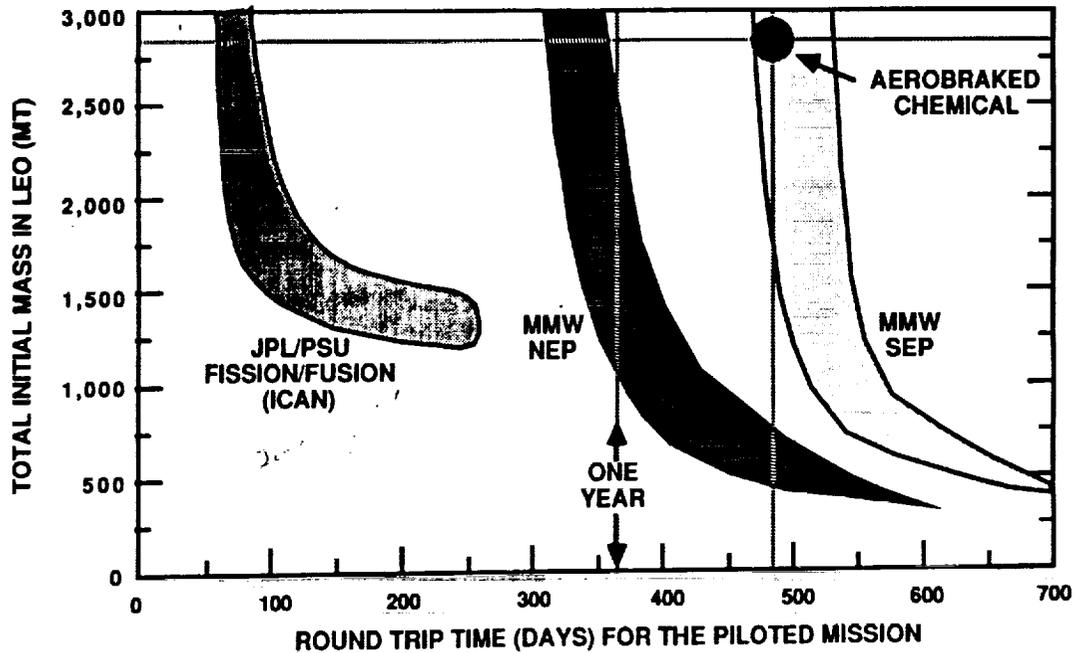

## The Limits of Chemical Propulsion

ADVANCED PROPULSION CONCEPTS

## MAJOR BENEFITS FOR FUTURE NASA MISSIONS

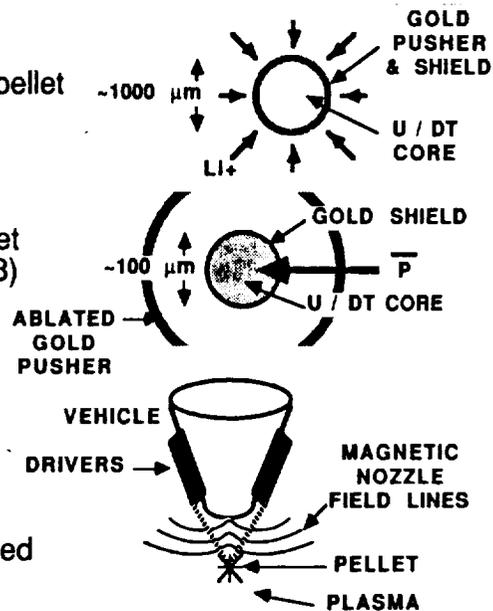

100 MT Round Trip Payload

**PENN STATE  
ION-COMPRESSED ANTIMATTER-CATALYZED  
NUCLEAR (ICAN) PROPULSION**

**CONCEPT DESCRIPTION**

- Uranium (or Pu) enriched DT (or D-He3) pellet is compressed using a megajoule-class light ion (Li) driver
- At the time of peak compression, the target is bombarded with a small number ( $\sim 10^8$ ) of antiprotons to catalyze fission
- The fission energy release triggers a high-efficiency fusion burn to heat the propellant
- The resulting expanding plasma is deflected by a magnetic nozzle to produce thrust

**RECENT RESULTS FROM  
PENN STATE FISSION/FUSION (ICAN) WORK**

- THE TECHNOLOGY FOR A 10 GW SYSTEM MAY BE FEASIBLE IN 2010 TIME FRAME ...GIVEN ADEQUATE RESOURCES
- ANTIPROTON QUANTITIES REQUIRED ACHIEVABLE
  - $10^8$  ANTIPROTONS PER PELLETT CAN BE PRODUCED NOW IN TEN MIN. AT CERN
  - SOLID ANTI-H2 STORAGE NOT NEEDED
- RADIATION FLUENCE MAY BE MUCH LOWER THAN FUSION PROPULSION
- $\approx 100$  DAY ROUND-TRIP TO MARS
- AFOSR INITIATIVE TO DEMONSTRATE SCIENTIFIC FEASIBILITY OF MICRO-FISSION IN FIVE YEARS (\$3.5M LEVERAGED THUS-FAR)

## PENN STATE FISSION/FUSION (ICAN) WORK Program Goals

**THIS YEAR**

DEVELOPED MICRO-FISSION AND FISSION/FUSION CONCEPTS  
THROUGH DETAILED PELLET MODELING

CONVINCED AFOSR TO ESTABLISH INITIATIVE TO PROVE SCIENTIFIC  
FEASIBILITY IN  $\approx 5$  years

**NEXT YEAR**

CONTINUE THEORETICAL RESEARCH TO ADDRESS MINIMIZING  
RADIATION FLUENCE FROM PROPULSION SYSTEM (D-HE3 FUEL)

IMPROVED MODELS OF UP-COMING EXPERIMENTS AT SHIVA STAR

DETAILED EXPERIMENTAL DESIGN AND PLANNING

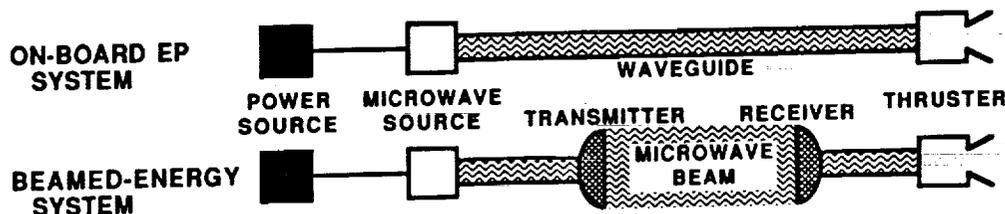

**FUTURE YEARS**

ADDRESS CRITICAL TECHNOLOGIES IN SUPPORTING SUBSYSTEMS

CONTINUE TO DEVELOP CONCEPT TO ESTABLISH FEASIBILITY FOR  
FLIGHT IN 2010-2020 TIME FRAME

## JPL ELECTRODELESS ELECTRIC PROPULSION THRUSTERS

- May dramatically improve EP thruster life by eliminating electrodes and their associated erosion
- Absorb microwave energy into propellant
  - Examples
    - Electron-Cyclotron Resonance Thruster (JPL)
    - Microwave Electrothermal Rockets (LeRC & JPL)
    - Variable-Isp Plasma Rocket (MIT)
- May be able to use extraterrestrial-produced propellants (e.g., O<sub>2</sub>)
- Can be used as an electric propulsion system (with on-board microwave source) or as a beamed-energy system (with a remote microwave transmitter)

AEROSPACE TECHNOLOGY DIRECTORATE

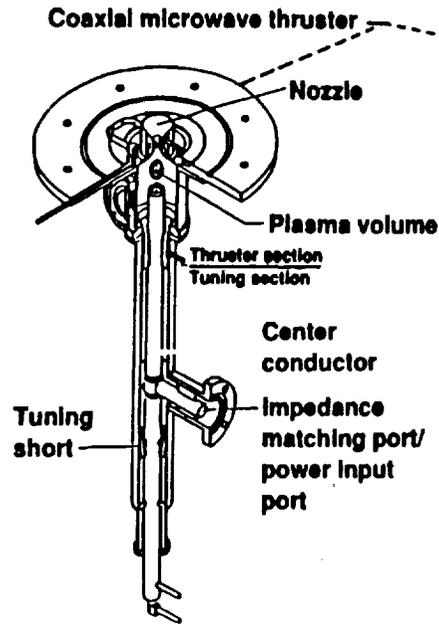

SPACE PROPULSION TECHNOLOGY DIVISION

Lewis Research Center

ADVANCED PROPULSION CONCEPTS

ELECTRODELESS ROCKETS- MICHIGAN STATE UNIVERSITY

The potential for high power absorption (>90%) into the propellant can be realized using external impedance matching with the coaxial microwave thruster

AEROSPACE TECHNOLOGY DIRECTORATE

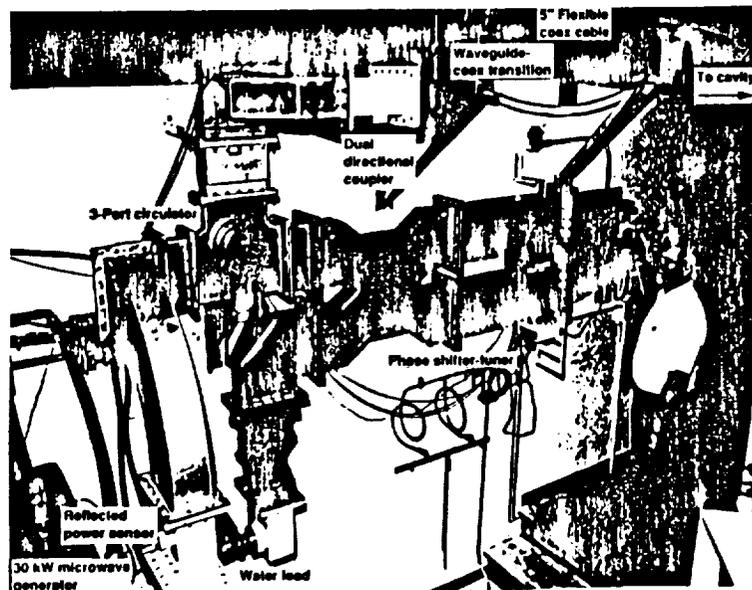

SPACE PROPULSION TECHNOLOGY DIVISION

Lewis Research Center

ADVANCED PROPULSION CONCEPTS

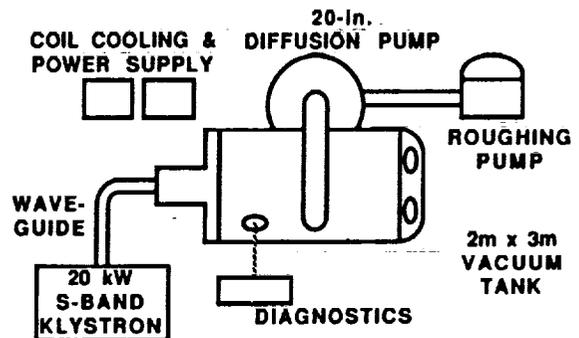

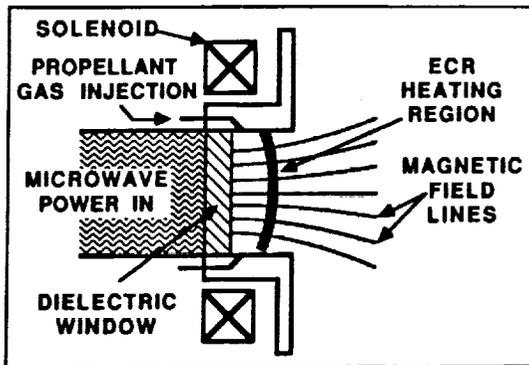

POWER CIRCUIT FOR ELECTRODELESS THRUSTER COMPLETED

CR-90-51117

# ELECTRON-CYCLOTRON RESONANCE (ECR) PLASMA ENGINE

- Recent Work
  - Quasi 1-D Plasma Model
  - Axisymmetric Magnetic Nozzle Model
  - Completed assembly of test facility and preliminary experiments
- Near-term plans
  - Optimize magnetic field configuration
  - Automate experimental facility
  - Improve theoretical models
- Future plans
  - Optimized devices
  - Higher power levels
  - Alternate propellants

## ELECTRODELESS ELECTRIC THRUSTERS Program Goals

### THIS YEAR

COMPLETE ECR PLASMA ENGINE BASIC PHYSICS RESEARCH WITH GO/NO-GO DECISION.

### NEXT YEAR

TEST 25-KW ELECTRODELESS ROCKET CONCEPT

INITIATE DEVELOPMENT OF HIGH-EFFICIENCY AND/OR HIGH THRUST ECR DEVICE (CONTINGENT ON DECISION)

### FUTURE YEARS

DEMONSTRATE APPLIED-FIELD ELECTRODELESS DEVICES AT HIGH SPECIFIC IMPULSES AND EFFICIENCIES

ADVANCED PROPULSION CONCEPTS  
**BEAMED ENERGY PROPULSION**

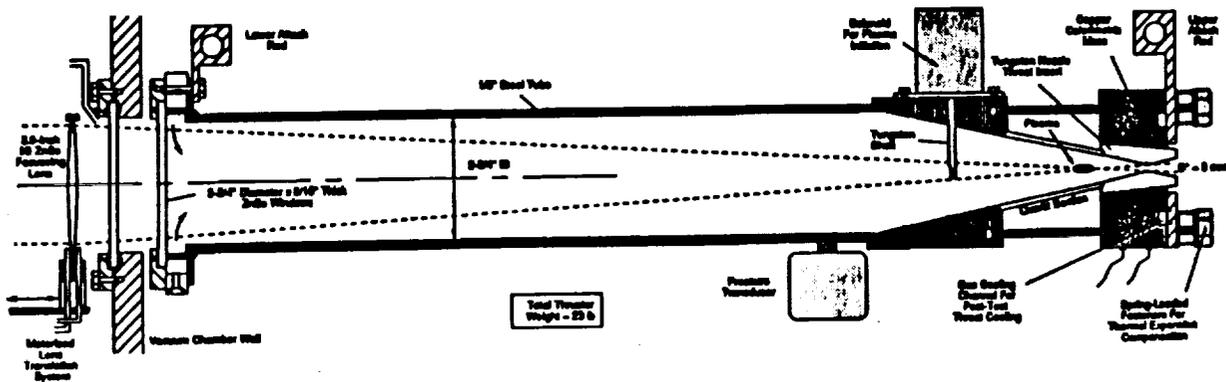

- Improve propulsion system performance by removing the power source from the vehicle
  - Locate the source (laser) on ground or in orbit
  
- Various combinations of source, source location, and propulsion system possible
  - Near-visible vs microwave
  - Ground-based vs space-based transmitter
  - Direct (thermal) thruster vs indirect (beam -> electric) EP thruster
  
- All concepts limited by transmission capability
  - Atmospheric effects for ground-based lasers
  - Diffraction effects for long distances (probably)

COMBUSTION SCIENCES, INC.  
 Space Propulsion Division

## Thruster Layout

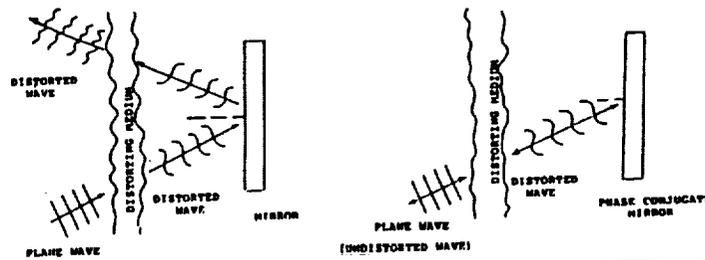

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>• Specific Impulse = 600 - 700 sec</li> <li>• Pressure = 1.0 atm</li> <li>• Plasma Efficiency = 35%</li> <li>• Overall Efficiency = 20%</li> </ul> | <ul style="list-style-type: none"> <li>• Mass Flow = 0.1 g/sec</li> <li>• Throat <math>D^*</math> = 3 mm</li> <li>• Thrust = 0.5 N</li> </ul> |
|---|---|

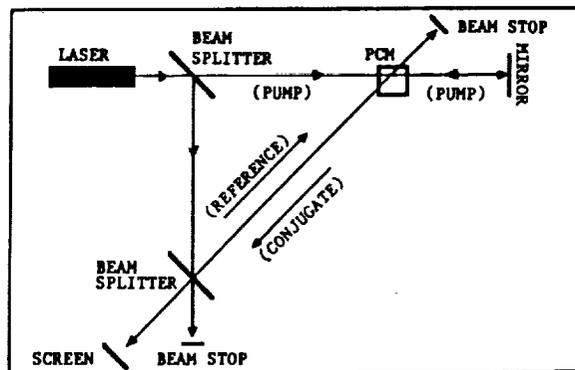

**PHASE CONJUGATION**

- ALTERNATIVE TO ADAPTIVE OPTICS
- NON-LINEAR OPTICAL EFFECT
  - "DYNAMIC HOLOGRAPHY"
  - EXACTLY REVERSES DIRECTION, PHASE OF INCIDENT BEAM
  - ELIMINATES EFFECTS OF DISTORTING MEDIUM

**PHASE CONJUGATION**

**IN-HOUSE PHASE CONJUGATION EXPERIMENTS**

ADVANCED PROPULSION CONCEPTS

**BEAMED ENERGY PROPULSION  
Program Goals**

**LASER ROCKET**

BUILD & DIRECTLY TEST A 10 kW LASER ROCKET (AT U. of ILL.)

- ANCHOR THERMAL & PERFORMANCE MODLES
- DIRECTLY EVALUATE THRUST VS GEOMETRY & CONDITIONS

DESIGN AND FABRICATE A 100 kW LASER ROCKET

**PHASE CONJUGATE OPTICS**

CONTINUE IN-HOUSE LeRC PHASE CONJUGATION EXPERIMENTS

- 3,4 WAVE MIXING
- LOW POWER HeNe LASER
- BaTiO<sub>3</sub> PHOTOREFRACTIVE CRYSTALS

WORK TOWARD 100 kW GROUND-TO-SPACE DEMONSTRATION

ADVANCED PROPULSION CONCEPTS

**LeRC MULTIMEGAWATT PLASMA  
ROCKET PROGRAM**

JOINT DOE-NASA PROGRAM INITIATED WITH LOS ALAMOS

- LEVERAGES FUSION REACTOR PROGRAM BY USING 100 MW SPHEROMAK TECHNOLOGY
- HAVE DEMONSTRATED OPERATION AT 10 MW
- WILL ESTABLISH POWER BALLANCE AND SCALING CHARACTERISTIC OF LARGE SCALE (0.5m) ROCKETS OPERATED WITH EXTERNAL MAGNETIC FIELDS

**PROGRAM GOALS**

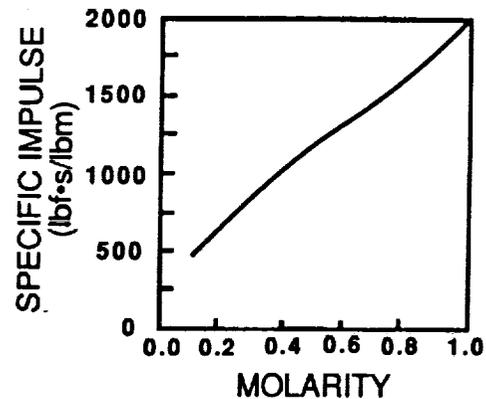

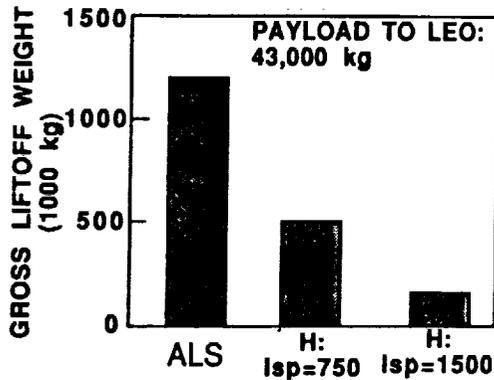

- 1995: DEMONSTRATE SUSTAINED MW-CLASS PLASMA ROCKET
- 1998-2003: DEMONSTRATE SUSTAINED 2 MW PLASMA ROCKET
- BEYOND 2004: DEMONSTRATE 10 MW PLASMA ROCKET

ADVANCED PROPULSION CONCEPTS

# LeRC ATOMIC HYDROGEN ROCKET PROGRAM

**CONCEPT:**

FREE RADICAL ATOMIC HYDROGEN IS STORED IN A SOLID MATRIX OF MOLECULAR HYDROGEN UNDER HIGH MAGNETIC FIELD AND LOW CRYOGENIC TEMPERATURE

ADVANCED PROPULSION CONCEPTS

## LeRC ATOMIC HYDROGEN ROCKET Program Goals

**APPROACH**

CONTRACT WORK AT LLNL, U. of HAWAII, AND OAK RIDGE  
LeRC SYSTEMS ANALYSIS AND VEHICLE STUDIES

**1995**

IDENTIFY ATOMIC HYDROGEN CONFINEMENT TECHNIQUE

**1996**

DEMONSTRATE SUSTAINED CONFINEMENT

**BEYOND 2004**

TEST LABORATORY SCALE ATOMIC HYDROGEN ROCKET

# SUPERSONICALLY-HEATED MICROWAVE ELECTROTHERMAL ROCKET

## CONCEPT:

MICROWAVE ENERGY IS COUPLED TO A GAS IN SUPERSONIC FLOW DOWNSTREAM OF THE THROAT - A "MICROWAVE AFTERBURNER"

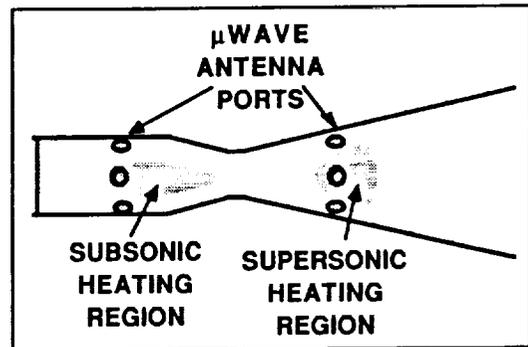

## POTENTIAL BENEFITS:

MAY CIRCUMVENT HEATING LIMITS TO ROCKET PERFORMANCE

- 2X IN SPECIFIC IMPULSE
- 2X IN EFFICIENCY

## HISTORY:

A QUALITATIVE EXTENSION OF LeRC, P.S.U., and M.S.U. MICROWAVE ROCKET RESEARCH

## SUPERSONICALLY-HEATED $\mu$ WAVE ROCKET Program Goals

### YEAR ONE

- VERIFY THEORETICAL CONCEPT BENEFITS BY MODELING:
- SUPERSONIC HEATING REGION
  - VISCOUS EFFECTS
  - ENERGY TRANSFER KINETICS AND GAS EXPANSION

### YEAR TWO

- MODIFY JPL APPARATUS TO DEMONSTRATE S.S. HEATING
- INVESTIGATE DIFFERING ANTENNA SCHEMES AND ENGINE PERFORMANCE

### FUTURE YEARS

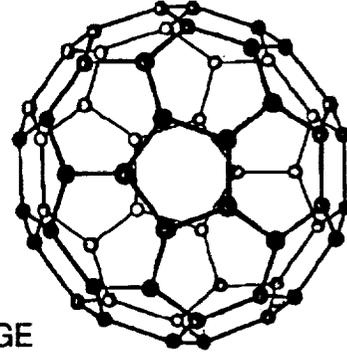

- DEVELOP FLIGHT-LIKE NEAR-TERM SYSTEMS
- DEVELOP ADVANCED CONCEPT ENGINES
- STUDY APPLICATION TO OTHER ROCKET SYSTEMS

**CARBON-60 ION PROPULSION****CONCEPT:**

BUCKMINSTERFULLERENE IS SUBLIMATED, IONIZED AND ELECTRO-STATICALLY ACCELERATED TO PRODUCE THRUST

**POTENTIAL BENEFITS:**

- FIRST CLUSTER PROPULSION CONCEPT TO PROMISE HIGH PROP. UTILIZATION, MONO-MASS DISTRIBUTION, MINIMAL FRAGMENTATION, LARGE ION MASS, AND LOW IONIZATION ENERGY
- HIGH EFFICIENCY EVEN IN 1000 - 3000 s RANGE
- DRAMATICALLY RELAXED GRID SPACING AND DISCHARGE CURRENT FOR ULTRA-HIGH-POWER ION ENGINES

**CARBON-60 ION PROPULSION  
Program Goals****YEAR ONE**

VERIFY THEORETICAL CONCEPT BENEFITS BY MEASURING:

- IONIZATION CROSS SECTIONS
- VAPOR PRESSURE CURVES
- FRAGMENTATION EFFECTS

**YEAR TWO**

ADDRESS PRACTICAL DEVELOPMENT ISSUES

- SELECT BEST IONIZATION/ACCELERATION SCHEMES
- MEASURE CHARGE-TO-MASS DISTRIBUTIONS
- INVESTIGATE CONDENSATION AND SPUTTERING

**FUTURE YEARS**

- DEVELOP FLIGHT-LIKE NEAR-TERM SYSTEMS
- DEVELOP ADVANCED CONCEPT ENGINES
- EXAMINE HIGHER-MASS CARBON CLUSTERS

Note: Does not address fission research

## **ADVANCED PROPULSION CONCEPTS SUMMARY**

### **TECHNICAL CHALLENGE:**

STATE-OF-THE-ART AND EMERGING PROPULSION TECHNOLOGIES DO NOT MEET THE REQUIREMENTS FOR MANY AMBITIOUS 21st CENTURY SPACE MISSIONS. FOR EXAMPLE, BIOMEDICAL CONSIDERATIONS MAY RULE OUT TRIPS TO MARS WITH FLIGHT TIMES GREATER THAN ONE YEAR - HENCE APC MAY BE REQUIRED EVEN FOR SEI

### **TECHNOLOGY MANAGEMENT APPROACH:**

- IN-HOUSE SYSTEMS STUDIES (BENEFIT V.S. TECHNOLOGY NEEDS)
- IN-HOUSE PROOF-OF-CONCEPT RESEARCH (EXPERIMENTS AND THEORY)
- CONTRACTED RESEARCH (ESPECIALLY EXPERIMENTS AND THEORY AT UNIVERSITIES)

### **PAYOFF: REVOLUTIONIZE SPACE TRAVEL**

- ROUND-TRIPS TO MARS IN A FEW MONTHS
- PILOTED ROUND-TRIPS TO OUTER PLANETS IN 1 TO 2 YEARS
- ROBOTIC MISSIONS BEYOND THE SOLAR SYSTEM

### **RATIONALE FOR AUGMENTATION:**

- MAY BE THE MOST IMPORTANT TECHNOLOGIES FOR 21st CENTURY SPACE ACTIVITIES
- CURRENT PROGRAM FUNDING IS SUBCRITICAL - 3x PLAN IS VITAL

### **RELATIONSHIP TO FOCUSED ACTIVITIES AND OTHER PROGRAMS:**

- CONNECTIONS TO PROGRAMS SUCH AS SEI MADE VIA SYSTEMS STUDIES AND MEETINGS
- RESEARCH COMPONENT OF THIS PROGRAM STILL NEW
- HAS LEVERAGED SIGNIFICANT PROGRAMS FROM OTHER AGENCIES:
  - i.e. JPL's SUPPORT OF ICAN AT PENN STATE RESULTED IN A \$3.5M AFOSR INITIATIVE TO DEMONSTRATE FEASIBILITY OF MICRO-FISSION

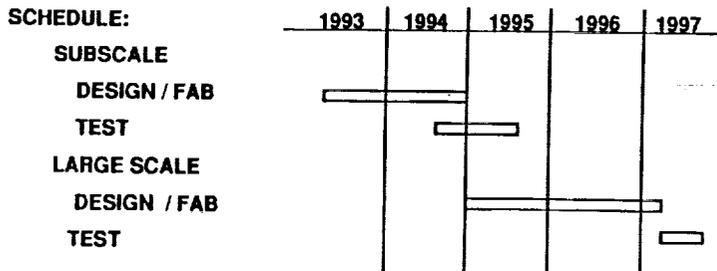

## ADVANCED PROPULSION TECHNOLOGY

**TITLE:** ADVANCED HIGH THRUST EXPANDER CYCLE THRUST CHAMBER TECHNOLOGY

**OBJECTIVE:** INVESTIGATE AND VERIFY AT LARGE SCALE THE TECHNOLOGIES NEEDED TO ALLOW OPERATION OF AN O<sub>2</sub>/H<sub>2</sub> EXPANDER CYCLE THRUST CHAMBER AT HIGH THRUST LEVELS

**APPROACH:** SUPPLEMENT EXPANDER CYCLE WORK TO EXPLORE ALTERNATE HEAT TRANSFER ENHANCEMENT APPROACHES FOR HIGH THRUST APPLICATIONS. PURSUE SUBSCALE INVESTIGATIONS TO CHARACTERIZE THE APPROACHES. SELECT THE MOST PROMISING FOR VERIFICATION AT LARGE SCALE. TESTING TO BE DONE AT THE MSFC TEST CELL 116.

<b>FUNDING REQUIREMENT:</b>	<u>FY93</u>	<u>FY94</u>	<u>FY95</u>	<u>FY96</u>	<u>FY97</u>
\$K	500	1500	3000	3000	2500

**APPLICATION:** APPLICATIONS FOR HIGH THRUST EXPANDER CYCLE ENGINES INCLUDE UPPER STAGES, ORBIT TRANSFER, INTERPLANETARY TRANSFER VEHICLES

## ADVANCED PROPULSION TECHNOLOGY

**TITLE:** LARGE SCALE PLATELET CHAMBER DEMONSTRATION

**OBJECTIVE:** VALIDATE FORMED PLATELET COOLING LINER CONSTRUCTION IN A LARGE SCALE COMBUSTION CHAMBER

**APPROACH:** SUPPLEMENT EXISTING WORK UNDER CONTRACT NAS8-37456 TO CONSTRUCT A LARGE SCALE THRUST CHAMBER AND TEST FIRE THE CHAMBER TO VERIFY THE PLATELET DESIGN APPLICATION. CHAMBER SIZE WILL BE BASED ON A DESIGN THAT IS COMPATIBLE WITH USING AN EXISTING HIGH THRUST METHANE INJECTOR (750KLB). THE TESTS WILL EMPLOY O<sub>2</sub>/H<sub>2</sub> AT A THRUST LEVEL OF ABOUT 450 KLB. THE CHAMBER STRUCTURE WILL BE BASED ON EITHER CASTING TECHNOLOGY BEING DEVELOPED UNDER THE ADVANCED MAIN COMBUSTION CHAMBER ACTIVITY OR A GENERAL WORKHORSE CONSTRUCTION APPROACH. TESTING WILL BE CONDUCTED AT THE MSFC TEST CELL 116.

<b>FUNDING REQUIREMENT:</b>	<u>FY93</u>	<u>FY94</u>	<u>FY95</u>	<u>FY96</u>	<u>FY97</u>
\$K	500	1000	1500	2000	500

**APPLICATION:** APPLICATIONS FOR FORMED PLATELET CONSTRUCTION INCLUDE ANY ROCKET ENGINE NEW DEVELOPMENT OR EXISTING ENGINE MODIFICATION WHICH CAN BENEFIT FROM LOW HOT WALL TEMPERATURES IN THE RANGE OF 400°F TO 700°F.

**TITLE: ADVANCED CAST HOT GAS MANIFOLD FOR HIGH PRESSURE  
PREBURNER CYCLE ENGINES**

**OBJECTIVE: DEMONSTRATE TECHNOLOGY NECESSARY FOR  
DEVELOPMENT OF A LOW COST, HIGH RELIABILITY HOT  
GAS MANIFOLD.**

**APPROACH:**

- SELECT THE SSME AS A DESIGN POINT:
  - DESIGN COMPONENT IN-HOUSE
    - STRUCTURAL & DYNAMIC ANALYSIS
    - THERMAL ANALYSIS
  - PROCUREMENT - STRUCTURAL CASTING
  - MANUFACTURE AND ASSEMBLY IN-HOUSE
  - TEST AND VERIFICATION IN-HOUSE

**SCHEDULE:**

- |                                     |                  |
|-------------------------------------|------------------|
| • DESIGN AND ANALYSIS               | JUNE 91 - JAN 92 |
| • PROCUREMENT OF STRUCTURAL CASTING | JAN 92 - JAN 93  |
| • MANUFACTURE & ASSEMBLY            | JAN 93 - JAN 94  |
| • TEST & VERIFICATION               | JAN 94 - DEC 94  |

**COST: 4 M**

**TITLE: ADVANCED GAS GENERATION FOR MULTI-PHASE OPERATION  
(O<sub>2</sub>/H<sub>2</sub> PROPELLANTS)**

**OBJECTIVE: DEVELOPMENT AND DEMONSTRATION OF A O<sub>2</sub>/H<sub>2</sub> GAS  
GENERATOR WHICH IS STABLE AND HAS HIGH PERFORMANCE  
UNDER "ANY " OPERATION CONDITION OR PROPELLENT PHASE.**

**APPROACH:**

- USE INJECTOR DESIGN CODES TO SELECT POTENTIAL CANDIDATES
- EVALUATE CANDIDATE ELEMENT CONCEPTS AT THE MSFC COMBUSTION PHYSICS LABORATORY FACILITY (COLD FLOW SCREENING )
- POTENTIAL CANDIDATES WILL BE HOT FIRE TESTED AT TS 116 PREBURNER POSITION.

**SCHEDULE:**

- |                       |                   |
|-----------------------|-------------------|
| • CANDIDATE SELECTION | JUNE 91 - JUNE 92 |
| • COLD FLOW SCREENING | JAN 93 - JUNE 93  |
| • HOW FIRE EVALUATION | JAN 94 - JUNE 94  |

**COST: 1M**

**TITLE: ADVANCED MAIN COMBUSTION CHAMBERS CYCLE LIFE DEMONSTRATIONS**

**OBJECTIVE: DEMONSTRATE THE CYCLE LIFE CAPABILITY OF PROMISING CONCEPTS FOR ADVANCED CHAMBER DESIGN**

- VACUUM PLASMA SPRAYED LINERS
- PLATELET LINERS
- LIQUID METAL DIFFUSION BONDED LINER (REDUCED MATERIAL PROPERTIES)
- HIGH ASPECT RATIO COOLANT CHANNELS - EDM FORMED
- GRADATED OXIDATION RESISTANT (BLANCHING) METALLIC COATING (VACUUM PLASMA SPRAYED)
- GLIDCOP (MATERIAL) LINER
- POWDER METAL

**APPROACH: FABRICATE "40K THRUST" SUBSCALE CHAMBERS AND TEST FOR 100+ THERMAL CYCLES EACH AT TS116 AT MSFC.**

**SCHEDULE: SIX MONTH TEST SERIES EACH**

**COST:**

\* CURRENTLY SCHEDULED

## **COMBUSTION STABILITY FOR HYBRID ROCKET ENGINES**

**LIQUID-SOLID HYBRID ROCKET ENGINES MAY BE SUBJECT TO COMBUSTION INSTABILITIES RELATED TO LIQUID OXIDIZER FEED LINES, COMBUSTION PROCESSES, AND FLOW PROCESSES.**

**DATA ARE REQUIRED ON THE OXIDIZER ATOMIZATION PROCESSES, BURNING RATES, FLOW ENHANCEMENT OF BURNING RATES, EFFECTS OF SUSPENDED DROPLETS AND PARTICLES, VORTEX SHEDDING EFFECTS, AND OTHER COMBUSTION CHAMBER PROCESSES.**

**COMBUSTION STABILITY MODEL CAN BE DEVELOPED AND VALIDATED USING THE DETAILED PHYSICAL DATA.**

**COST - ABOUT \$200K PER YEAR (2 YEARS)**

## **ADVANCED DIAGNOSTICS FOR COMBUSTION AND FLOW**

**LASERS AND OTHER OPTICAL EQUIPMENT ARE REQUIRED TO SUPPORT MEASUREMENTS RELATED TO COMBUSTION STABILITY AND COMBUSTION PHYSICS AND CHEMISTRY. THREE DIMENSIONAL PHASE DOPPLER PARTICLE ANALYSIS CAPABILITY IS REQUIRED FOR ATOMIZATION, EVAPORATION, AND DROPLET BURNING STUDIES.**

**DATA WILL BE USED FOR COMBUSTION AND COMBUSTION STABILITY MODEL VALIDATION, AND FOR DESIGN STUDIES ON PROTOTYPE INJECTOR ELEMENTS.**

**COST - ABOUT \$200K PER YEAR (3 YEARS)**

## **PERFORMANCE ANALYSIS FOR HIGH TEMPERATURE ENGINES**

**CURRENTLY USED ROCKET ENGINE PERFORMANCE ANALYSIS MODELS REQUIRE UPGRADING TO DEAL WITH HIGH TEMPERATURE WORKING FLUIDS SUCH AS THOSE IN NUCLEAR POWERED ENGINES FOR A MARS MISSION. SPECIFICALLY, UPDATED CHEMISTRY DATA ARE NEEDED.**

**COST - \$100K (1 YEAR)**

**TITLE: INJECTOR / MAIN COMBUSTION CHAMBER WALL  
COMPATIBILITY OPTIMIZATION STUDIES**

**OBJECTIVE: EVALUATE INJECTOR EFFECTS ON CHAMBER WALL  
COMPATIBILITY TO DESIGN FOR INCREASED  
CHAMBER LIFE.**

**APPROACH: BY USING EXISTING "40K" CALORIMETER HARDWARE,  
EVALUATE THE EFFECT ON WALL HEAT FLUX & RESULTING WALL  
TEMPERATURE ON THE FOLLOWING:**

- **LOX COAX SWIRL vs. LOX COAX SHEAR ELEMENT**
- **OUTER ROW ELEMENT SCARFING**
- **OUTER ROW ELEMENT CANTING (INBOARD)**
- **FILM COOLING vs. MIXTURE RATIO BIAS**
- **OUTER ROW WALL GAP**

**SCHEDULE :**

- **HARDWARE FABRICATION - ONE YEAR**
- **TESTING & DATA EVALUATION - ONE YEAR**

**COST: 1M**

**INTEGRATED TECHNOLOGY PLAN  
FOR THE CIVIL SPACE PROGRAM**

N 93 - 71878

**LUNAR AND PLANETARY PROPELLANTS**

**NEEDS**

- Reduce cost of SEI missions
- Validate performance potential of In-situ propellants
- Demonstrate compatibility between production and propulsion systems

**CHALLENGE/APPROACH**

- Develop propulsion technology for engines that operate on propellants produced at the moon and Mars
- Insure engines operate with high degree of reliability and autonomy

**BENEFITS**

- Significantly reduce Earth launch-to-orbit mass requirements
- Increase self-sufficiency of planetary bases
- Significantly reduce trip-time for manned Mars missions

**LUNAR AND PLANETARY PROPELLANTS**

**CURRENT PROGRAM**

- Complete Carbon Monoxide/Oxygen sub-scale combustion experiments
- Identify technology issues for dual-fuel engine design
- Define Metal/oxygen monopropellant hazard classification
- Establish Metal/Oxygen monopropellant formulation

**AUGMENTED PROGRAM**

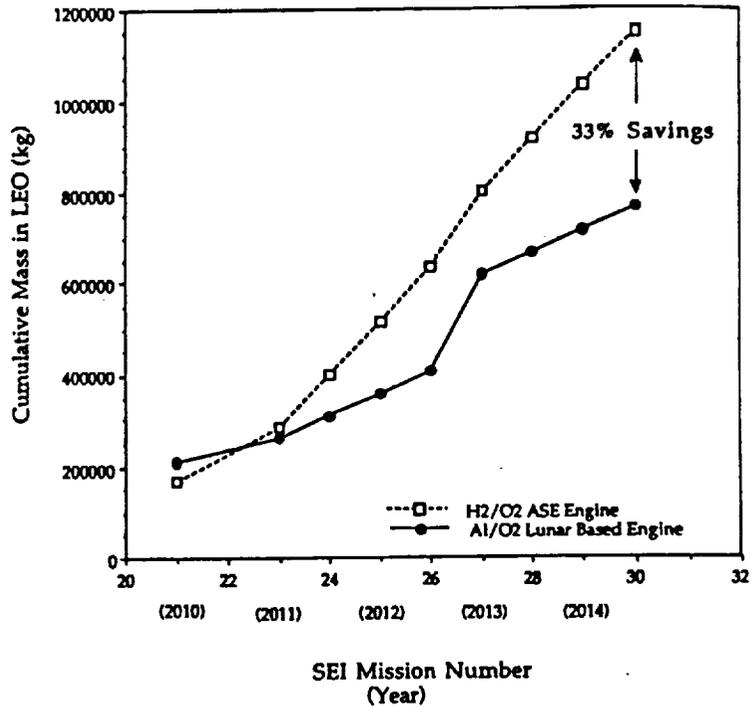

- Validate Sub-Scale Metal/Oxygen monopropellant combustion
- Demonstrate Carbon Monoxide/Oxygen engine at large scale
- Demonstrate capability for Large-batch production of Metal/Oxygen monopropellant

**Benefits**

**In Situ Propellant Utilization**

- Reduces Earth Launch Mass Requirements (see figure)
- Decreases Mars Mission Time
- Reduces Mission Complexity
- Establishes Self-Sufficiency of Lunar and Mars Bases

**Lunar Ascent/Descent Vehicle Propulsion**

**SPACE R&T BASEL PROPULSION  
HIGH THRUST CHEMICAL**

**Metallized Propellants:**

- Metallized Propellants Offer

Higher Specific Impulse and Higher Propellant Density  
Safer Propellants (Gelled)

- Significant Performance Increases Are Possible

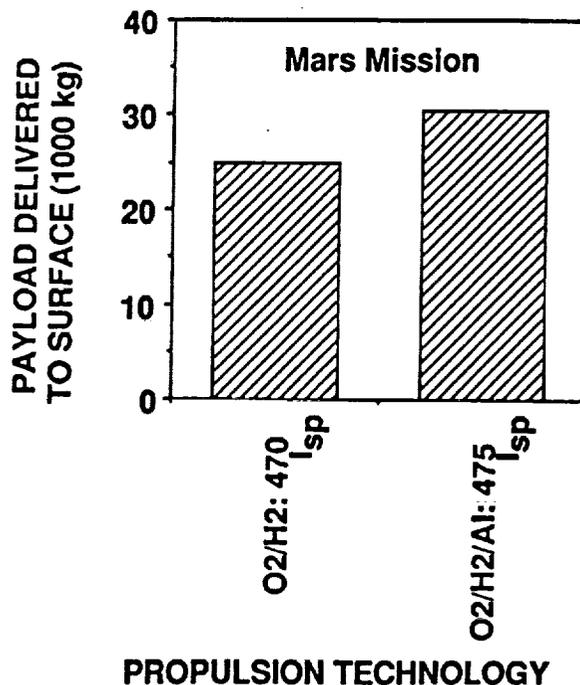

Higher Delivered Payload  
Lower Initial Mass in LEO

Oxidizer	+	Fuel	+	Metal
O <sub>2</sub>		H <sub>2</sub>		Al
O <sub>2</sub>		Hydrocarbon		Al
N <sub>2</sub> O <sub>4</sub>		MMH		Al

## Metallized Propellants: Areas of Application and Benefit

- Mars:
  - Payload To Surface Increased By 20 to 33 Percent
  - High  $I_{sp}$  Storable NTO/MMH/Al for Mars Ascent
- Lunar:
  - Payload To Surface Increased By 3 Percent
- Robotic Planetary:
  - Enables Fast Missions
- Earth to Orbit:
  - Liquid Rocket Boosters Added Payload Safety Enhanced With Gels

PAYLOAD MASSES FOR EXPEDITION MISSION

## Current and Needed Technology for Metallized Propellants

Current	Needed
<ul style="list-style-type: none"> <li>• Combustion /Testing: Preliminary Subscale O<sub>2</sub> /RP-1 /Al</li> </ul>	<p style="margin: 0;"><b>Complete Characterization:</b> O<sub>2</sub> /H<sub>2</sub> /Al, O<sub>2</sub> /RP-1 /Al</p>

# SPACE R&T BASE: PROPULSION HIGH THRUST CHEMICAL

---

## COMBUSTION

### TECHNOLOGY REQUIREMENTS

- Develop Atomization, Supercritical Vaporization, Mixing Models
- Develop Damping Device Models
- Develop Diagnostics To Make Measurements In The Combustor
- Develop Performance & Stability Database

### TECHNOLOGY CHALLENGES

- Designing High Performance Stable Engines
- Reducing The Amount Of Development & Qualification Testing

### BENEFITS

- Reduced Engine Weight
- Increased Engine Design Margin
- Reduced Engine Development Time

# SPACE R&T BASE: PROPULSION HIGH THRUST CHEMICAL

---

## AUGMENTED PROGRAM

### INJECTOR ATOMIZATION CHARACTERIZATION

- Develop Supercritical Spray Combustion Model

### ROCKET ENGINE COMBUSTION DIAGNOSTICS

- Develop Devices To Measure Rocket Combustor Fluid Properties

### NEW STABILITY RATING TECHNIQUES

- Develop High Energy Frequency Controlled Technique

### PERFORMANCE & STABILITY DATABASE

- Create Standardized Reporting Format & Database

### INTEGRATED BAFFLE/CAVITY MODEL

- Develop Hub Baffle & Baffle/Cavity Interaction Model

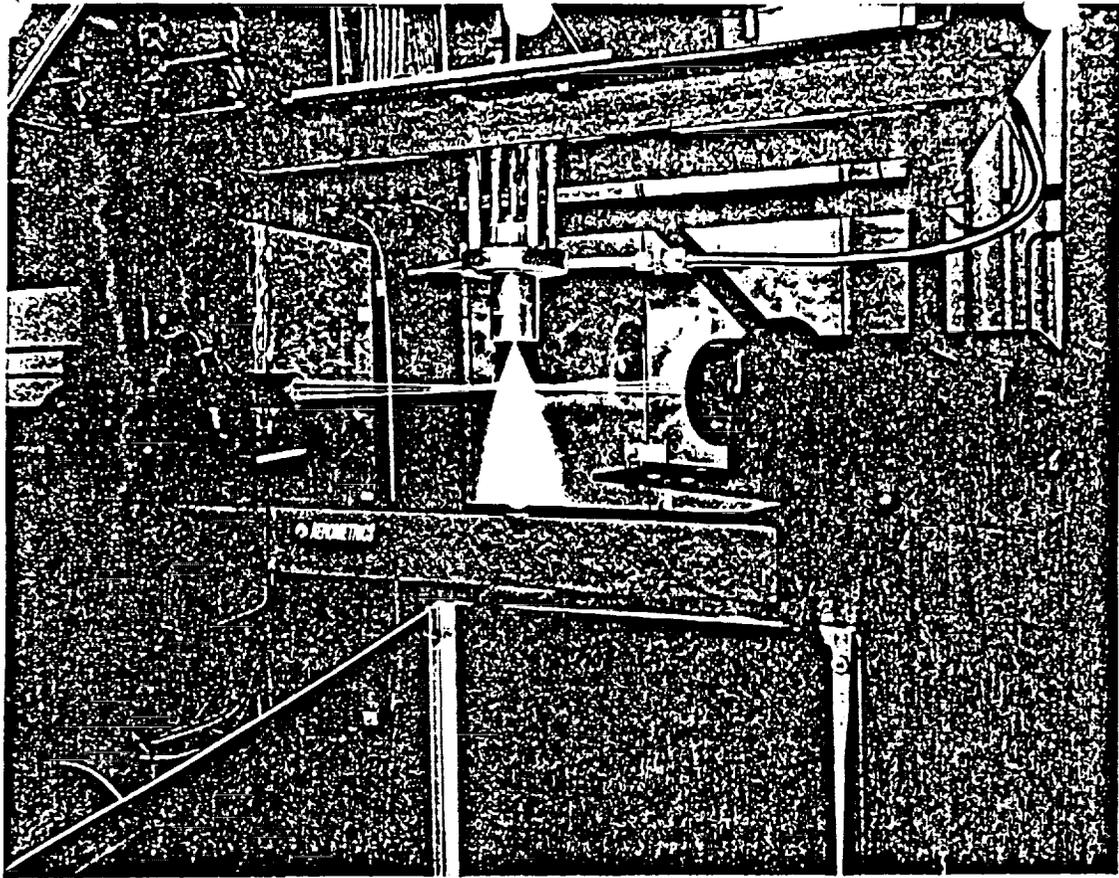

## CURRENT PROGRAM

### SHEAR COAXIAL INJECTOR ATOMIZATION CHARACTERIZATION

- Compare Cold Flow & Hot Fire Atomization Measurements
- Verify Existing Models & Develop New Model If Appropriate

### INJECTOR/CHAMBER FREQUENCY COUPLING INVESTIGATION

- Investigate LOX Tube Resonance Coupling Instability
- Create Validation Database For Model & CFD Code Development

SPACE R&T BASL    PROPULSION  
HIGH THRUST CHEMICAL

---

## TURBOMACHINERY CODES/TOOLS

### NEEDS

- Model secondary flows in the turbomachinery of liquid propellant rocket engines.
- Integrate these models into current design techniques

### CHALLENGE/APPROACH

- Reduce the prohibitive CPU time of numerical simulation
- Use approximation techniques until the availability of massively parallel processing

### BENEFITS

- Improved turbomachinery reliability, performance and life
- Decreased time and cost of development

TURBOMACHINERY CODES/TOOLS

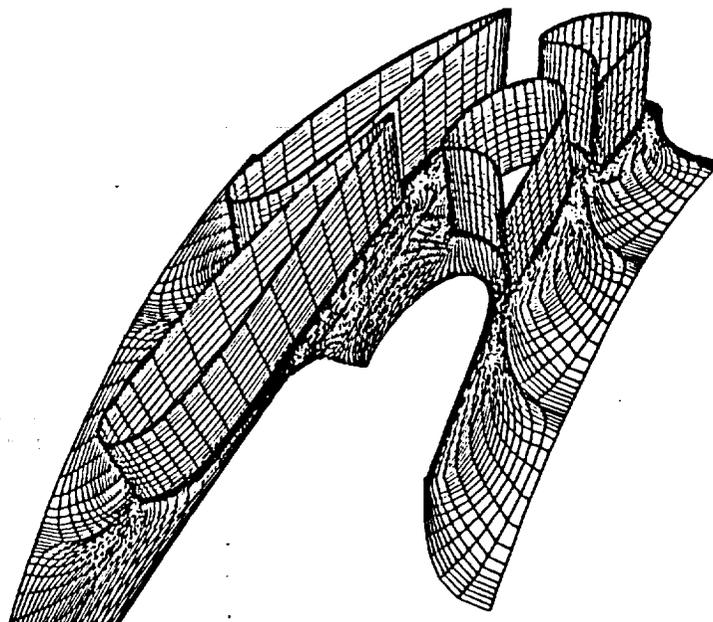

CURRENT PROGRAM

- Develop alternative approaches to numerically simulate 3D, unsteady viscous flow in space turbopumps to better predict aerothermal loads and component efficiencies

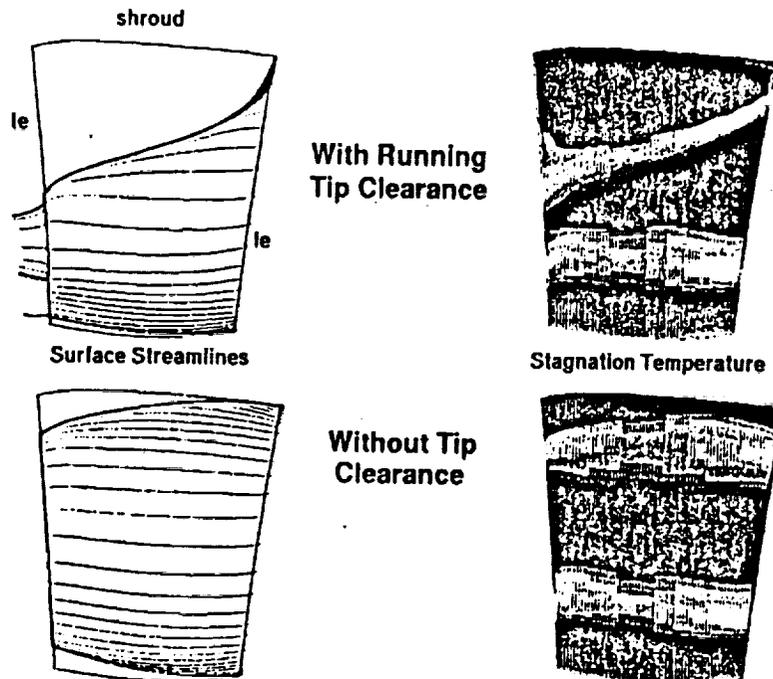

AUGMENTED PROGRAM

- Develop parallel processing capability for turbine design
- Develop deep throttling capability for space turbopumps
- Complete unsteady model for analysis of complete pump stage
- Verify aerodynamic performance for unique, space propulsion turbine blades

SPACE CHEMICAL PROPULSION PROGRAM  
Advanced Expander Test Bed (AETB)  
Hydrogen Turbine (First Stage)

Pratt & Whitney SSME HPFTP Second Vane Suction Side  
 Effect of First Blade Leakage Vortex on Second Vane Flow

SPACE R&T BASE PROPULSION  
 HIGH THRUST CHEMICAL

**BEARINGS**

**TECHNOLOGY NEEDS:**

- Validated design codes and methodologies
- Advanced materials and coatings
- Improved bearing and bearing damper design
- Improved thermohydrodynamic models

**TECHNOLOGY CHALLENGES:**

- Measure complete bearing fluid mechanic and thermal properties to thoroughly validate codes
- Standardize measurement techniques to determine bearing dynamic coefficients
- Identify propellant compatible and wear resistant materials
- Develop bearing designs tolerant to wide operating ranges and pump transients

**TECHNOLOGY BENEFITS:**

- Longer Life: Increased reliability, improved maintainability, multi-mission capability
- Improved Performance: Higher speeds, greater stiffness & damping, improved stability

**BEARINGS**

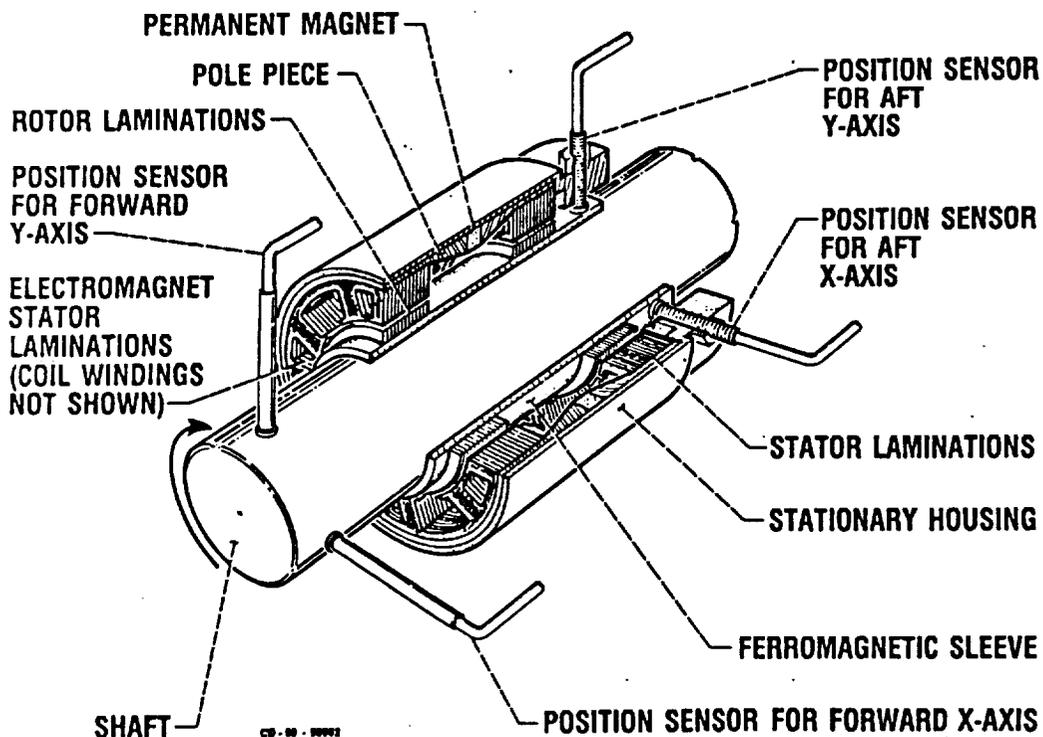

**CURRENT PROGRAM**

- Experimental testing of LH2 Foil Bearings
- Development of Foil Bearing design and performance prediction code
- Development of dynamic coefficients measurement technique
- Development of hydrostatic bearing steady state and dynamic characteristics code
- Flow visualization experiments of fluid film bearings for code validation
- Experimental testing of a hybrid magnetic bearing to identify technical issues

**AUGMENTED PROGRAM**

- Demonstration testing of foil bearings in a turbopump
- Experimental testing of LOX foil bearings
- Development of advanced hydrodynamic, hydrostatic and hybrid bearing concepts
- Experimental testing of fluid film bearings to validate codes
- Development of magnetic and superconducting magnetic bearing technology
- Demonstration of magnetic bearings in a turbopump
- Advancement of cryogenic fluid flow and thermal fundamentals to model bearing thermohydrodynamics (turbulence modeling, two-phase flow, cavitation, inertia)
- Establishment of tribomaterials design data base and methodology

**HYBRID MAGNETIC BEARING**

FOIL BEARING PERFORMANCE IN LH2

OBJECTIVE:

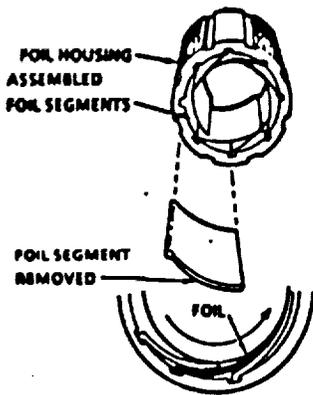

- CHARACTERIZE FOIL BEARING LOAD CAPACITY AND TORQUE IN LH<sub>2</sub>

APPROACH:

- COOPERATIVE AGREEMENT WITH AIRESEARCH UNDER 1958 SPACE ACT
- AIRESEARCH PROVIDES ANALYSES CODES AND FOIL BEARING TESTER
- LERC PROVIDES LH<sub>2</sub> TEST FACILITY

JUSTIFICATION

- LONG-LIFE, HIGH LOAD CAPACITY BEARING IS NEEDED FOR CRYOGENIC TURBOPUMPS
- AIRESEARCH HAS DEMONSTRATED LOAD CAPACITY OF 200 + psi IN GN2

PROGRAM HIGHLIGHTS:

- ACHIEVED 240 PSI LOAD CAPACITY IN LH<sub>2</sub>
- RAN STABLY AT ALL SPEEDS (10-97 KPRM)
- OVER 150 START/CYCLES WITH NO NOTICEABLE BEARING WEAR
- ACHIEVED 300 PSI LOAD CAPACITY IN LN<sub>2</sub>
- ACCUMULATED RUN TIME: 4 HRS IN LH<sub>2</sub> AND 5 HRS IN LN<sub>2</sub>

TURBOPUMP SEALS TECHNOLOGY

TECHNOLOGY NEEDS:

- Longer life
- Lower leakage - especially over wide throttling ranges in small turbopumps
- Higher pressure capability
- Dynamic stability, high shaft speed
- Compatible materials

TECHNOLOGY CHALLENGES:

- Low density, wear-resistant materials or material combinations
- Low leakage, non-contacting seals
- High dynamic response of seals to shaft excursions
- Oxygen compatible materials
- Actively controlling clearance

TECHNOLOGY BENEFITS:

- Space Basing capability due to improved reliability and maintainability
- Increased payload by reducing purge gases needed
- Increased component efficiency
- Improved reliability and maintainability

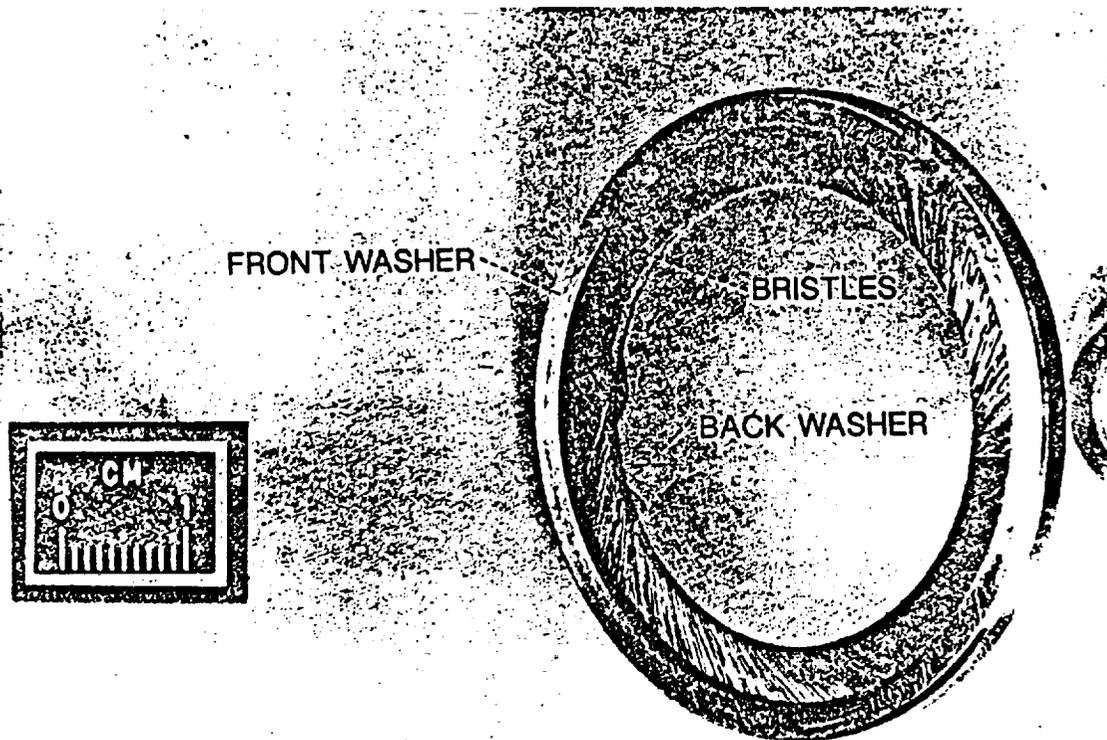

## TURBOPUMP SEALS TECHNOLOGY

### CURRENT PROGRAM

- BRUSH SEALS FOR CRYOGENIC APPLICATIONS (IN-HOUSE)  
FABRICATION INITIATED FOR TESTER MODS.
- BRUSH SEALS FOR HIGH TEMPERATURE APPLICATIONS (IN-HOUSE)  
ACQUIRED TEST RIG FROM THE AIR FORCE.
- NUMERICAL, ANALYTICAL, EXPERIMENTAL STUDY OF FLUID DYNAMIC FORCES IN  
SEALS (MECHANICAL TECHNOLOGY, INC.)  
THREE INDUSTRIAL CODES READY FOR USER EVALUATION

### PROPOSED AUGMENTATION

- DEFINE AND EXPERIMENTALLY VALIDATE CERAMIC BRUSH SEALS
- EXPERIMENTALLY VALIDATE ANALYSIS AND DESIGN CODE FOR 2-PHASE  
CRYOGENIC SEALS
- DESIGN AND DEMONSTRATE ACTIVELY-CONTROLLED OR "SMART" SEALS  
FOR AEROSPACE APPLICATIONS AND DEVELOP THE NECESSARY ANALYSIS  
AND DESIGN TOOLS

A TYPICAL BRUSH SEAL

Space R & T Use: Propulsion  
High Thrust Chemical

=====  
Systems Analysis and Engine Cycles

• **Technical Needs**

- Higher Performance
  - Combined Cycle
  - Altitude-Compensating Nozzles
  - Full-Flow Staged-Combustion Cycle
  - High-Mixture-Ratio Operation
- Optimization of Coolant-Side Heat Transfer

• **Technical Challenges**

- Higher Gas-Gas Injector Performance
- Combined-Cycle System Integration
- High-Aspect-Ratio Cooling Channel Database
- Mixture Ratio Control

• **Technical Benefits**

- Higher Performance
- Simpler Subsystems
- Less Severe Operating Conditions
- Enhanced Heat Transfer

Space R & T Use: Propulsion  
High Thrust Chemical

=====  
Systems Analysis and Engine Cycles

• **Current Program**

- Altitude-Compensating Nozzles
  - ⇒ Database on most promising concepts
- High-Mixture-Ratio Operation
  - ⇒ Capability to Operate at High Mixture Ratio Reliably
- High-Aspect-Ratio Cooling Channels
  - ⇒ Database for Future Designs

• **Augmented Program**

- Combined-Cycle Engine
  - ⇒ Engine Concept That Uses Both Air and Oxygen as Oxidizer
- Full-Flow Staged-Combustion Cycle
  - ⇒ Development of Technology for Gas-Gas Injection and Ox-Rich Preburner
- Liquid-Air Rocket
  - ⇒ Technology to use Liquefied Air as a Propellant
- CFD Modelling of Coolant Flow in Coolant Passages
  - ⇒ CFD Model

**SUMMARY**

**TECHNICAL CHALLENGE**

- Long life turbopump components.
- Improved stability and performance of combustion devices.
- Reduced launch mass and cost, enabling SEI missions.

**APPROACH**

- Validated models, codes and algorithms for component design and analysis.
- Develop benchmark data for supercritical spray dynamics.
- Evaluate advanced turbomachinery sub-components (seals and bearings) design concepts.
- System and cycle analysis for design optimization.
- Fundamental combustion research and material characterization.

**PAYOFF**

- Improved life, durability, performance and safety in the evolution of high thrust chemical propulsion systems, e.g., SSME and liquid rocket boosters, through advanced concepts and methodologies.
- Reduce SEI costs.

**RELATIONSHIP TO FOCUSED ACTIVITIES AND OTHER PROGRAMS**

Develop fundamental technologies in direct support of earth-to-orbit, orbit transfer and upper stage propulsion programs. Efforts are coordinated with other Centers and DOD as appropriate.

**TECHNOLOGY CONTRIBUTIONS**

- Expertise and technology in turbomachinery code development utilized by ATD and NLS designers.
- Combustion stability methodology applied to MSFC TTB and RCS thrusters at JSC.

Agenda

- ▶ Technology Requirements vs. SOA
- ▶ Benefits Assessment
- ▶ Integrated Program
  - Objective
  - Approach
  - Content
- ▶ Concluding Remarks
- ▶ Summary

## Cryogenic Fluid Systems Element Introduction

- ▶ All known future manned space missions and most future unmanned space missions require or could substantially benefit from the use of subcritical cryogenic liquids
  - As propellants
  - As life support fluids
  - As reactants
  - As coolants
  
- ▶ The current SOA is based on Centaur and Saturn upper stage technology and Apollo technology which is 15-20 years old
  
- ▶ Continued use of existing SOA technology imposes enormous cost and performance penalties on future missions, neither of which can be successfully borne by the Agency
  
- ▶ To meet the need, a NASA Cryogenic Fluid Systems Technology Program has been formulated with LeRC as Lead Center and substantial involvement and participation from MSFC
  
- ▶ The funding for the program is provided by both the Base R&T program and the Focused Program in Transportation

### TECHNOLOGY REQUIREMENTS VS. SOA

Capability	Flight Proven SOA: Saturn/Centaur	Future Requirements
Mission Operations	<u>Ground:</u> Assembly, Propellant Loading Check-out and Launch <u>Space:</u> Short Coast and Engine Restart	<u>Space:</u> Final Assembly, Propellant Loading, Check-out and Entire Mission Operation for Reusable Space-based stage
Mission Duration	Hours	Months (Moon) to Years (Mars)
Fluid Management - Thermal Control	3 Layers MLI	50-200 layers MLI Refrigeration (Lunar surface/Mars)
- Pressure Control	Prop. settling (low-g) & Vent	Thermodynamic Vent (Zero-g) compatible with mission ops.
- Liquid Acquisition	Prop. settling (low-g)	Capillary (Zero-g) compatible with mission operations
- Pressurization	Prop. settling (low-g) & GHe GH <sub>2</sub> after engine ignition (high-g)	Zero and low-g autogenous (GH <sub>2</sub> /GO <sub>2</sub> )
- Liquid Transfer	None	Nonvented (Zero-g) preferred; optimized prop. settling (low-g) may be acceptable
- Slosh Control	Baffles for launch and stage separation (accel. dominated)	Space operations (capillary dominated)
- Mass Gauging	One to high-g	Zero to low-g

Symon/TPSCA vs Future had 6 12 91

### Apollo - Space Exploration Initiative Comparison

Mission & Transportation Vehicle Characteristics	Apollo	Space Exploration Initiative	
		Lunar	Martian
Total Duration (1st Launch to crew return)	12 Days	3-15 months	3-5 years
Crew Size	3	4-6	4-16
Duration on Surface	3 days	1-12 months	1-2 years
Cargo Mass	0.7 mt	13-32 mt	TBD
No. of Propulsion Systems	4	1-2	1-2
- Trans Lunar/Mars Injection Propellant - Lunar/Martian Orbit & Earth Return Prop. - Surface Departure/Ascent Propellant	LOX/LH <sub>2</sub> Storable Storable	LOX/LH <sub>2</sub> or LH <sub>2</sub> (nuclear) LOX/LH <sub>2</sub> or LH <sub>2</sub> (nuclear) LOX/LH <sub>2</sub>	
LEO Departure Mass (75-80% propellant)	140 MT	160-280 mt	300-2000 mt
Mission Objectives	Init. Manned Presence	Conduct Science & Surface Exp.	

Key Space Exploration Initiative transportation system technology requirements (engines, aerobrake, and cryogenic fluid systems) are not based on "Apollo-type" mission scenarios

Use of Apollo technology to meet SEI mission requirements is not possible

Symon/TP/Apollo SEI comp had 6 12 91

## Criticality of Technology

- ▶ Exploration of the Moon and Mars requires cryogenic fluids for propulsion (both Chemical and Nuclear Thermal)
- ▶ Advanced cryogenic fluid systems should be classified as enabling to achieve necessary system performance and to reduce mission costs
  - Long-term fluid storage (Thermal Control)
  - Refill/contingency capability (Liquid Transfer)
  - Tank pressure control
- ▶ Recently completed assessments of technology required for exploration has shown cryogenic fluid management to be the highest priority from both Level II and Level III
- ▶ Office of Space Flight technology requirements assessment identified cryogenic storage, supply and handling as one of their highest priority technologies
- ▶ Synthesis committee report identifies cryogenic transfer and long-term storage as one of fourteen critical technologies for exploration

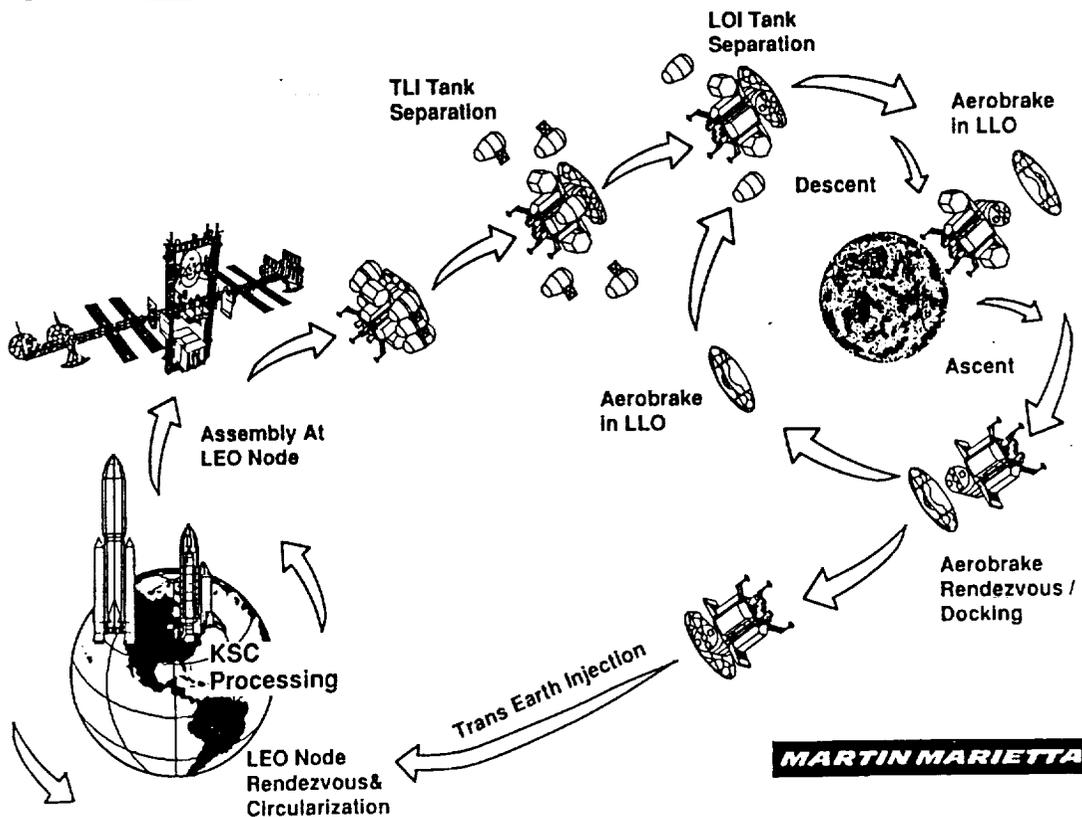

Symons/TPC/Criticality/Jan 6-13 91

## Benefits Assessment

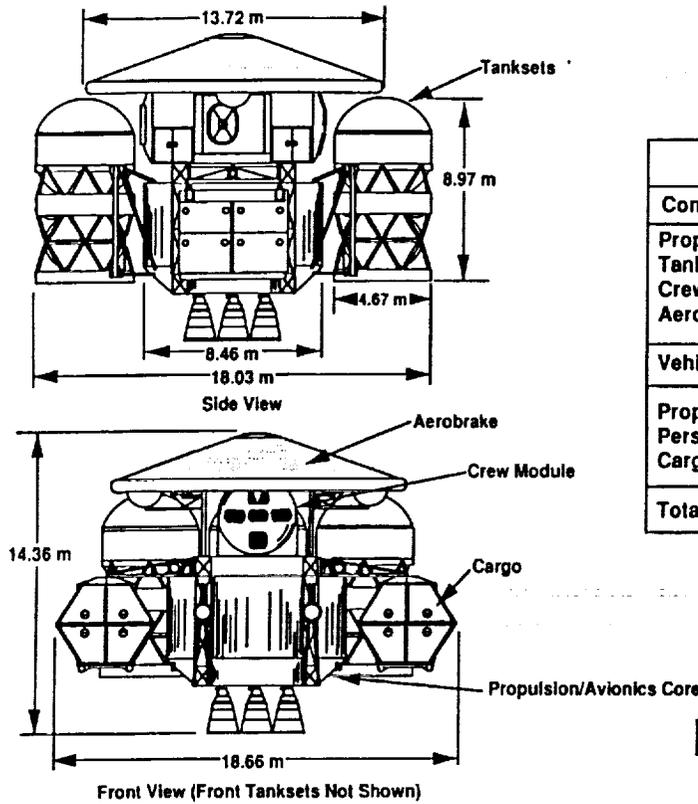

- ▶ **Baseline: Lunar Transfer System (LTS) Concept and Mission Scenario**  
Developed by Martin Marietta
  - Assumes three ETO launches at 45 day intervals (480K lb. total mass)
  - Allows 60 days for pre-Leo departure ops. (no contingency)
  - Assumed significant technology advances (Aerobrake, advanced space engine, thick MLI, zero-g cryo transfer, and pressure control)
  
- ▶ **State-of-the-Art Assumptions for Benefit Assessment**
  - Thermal control: 1/2 inch MLI with foam substrate
  - Pressure control: Shuttle Centaur system design criteria
  - Liquid transfer: No orbital capability (tanks loaded on ground) therefore, space-based/reusable concept precluded
  
- ▶ **Mass Savings (Technology Benefits) accrue from boiloff reductions and decreases in tankage volume/mass**

SymantTPBenefits 2.kad 6-13-91

## LTS Mission

# Selected Concept - Piloted Configuration

Mass Properties	
Components	Mass (t)
Prop/Avionics Core	7.19
Tanksets (4 TLI & 2 LOI)	9.11
Crew Module	7.78
Aerobrake & Equip	3.50
<b>Vehicle Dry Mass</b>	<b>27.58</b>
Propellant	174.0
Personnel/Misc	.66
Cargo w/Sppt	15.26
<b>Total Mass</b>	<b>217.50</b>

**MARTIN MARIETTA**

## Cryogenic Fluid Management Technology Benefits Assessment Results

ETO mass savings for nominal mission with 30 day lunar stay

<b>\$2.95B</b>	- Thermal control	= 28,700 lbm
	- Pressure control	= 18,500 lbm
	Total mass savings	= 47,200 (10% LEO mass growth)
	Potential cost savings	= \$118 M/mission (at \$2500/lbm ETO cost)

Benefit of adding a 45 day pre-LEO departure contingency

<b>\$ .75B</b>	- Thermal control	= 7100 lbm
	- Pressure control	= 4700 lbm
	Total mass savings	= 11800 lbm (2.5% of LEO mass growth)
	Potential cost savings	= \$29.5 M/mission (at \$2500/lbm ETO cost)

# Cryogenic Fluid Management Technology Benefits Assessment Results (continued)

## Additional benefit for 6 month lunar stay

**\$7.8B**

- Thermal control = 58,000 lbm
- Pressure control = 52,000 lbm
- Advanced thermal control = 14,700 lbm
- Total mass savings = 124,700 lbm (26%LEO Mass growth)
- Potential cost savings = \$312M/mission (at \$2500/lbm ETO cost)

## Additional Benefit of a tanker/depot (top-off, core & aerobrake tank fueling)

**\$1.6B**

- For nominal mission with 30 day lunar stay = 5,600 lbm
- For 45 day pre-LEO departure contingency = 18,500 lbm
- For 180 day lunar stay = 1,800 lbm
- Total mass savings = 25,900 lbm (5.4% of LEO mass growth)
- Potential cost savings = \$64.75M/mission (at \$2500/lbm ETO cost)

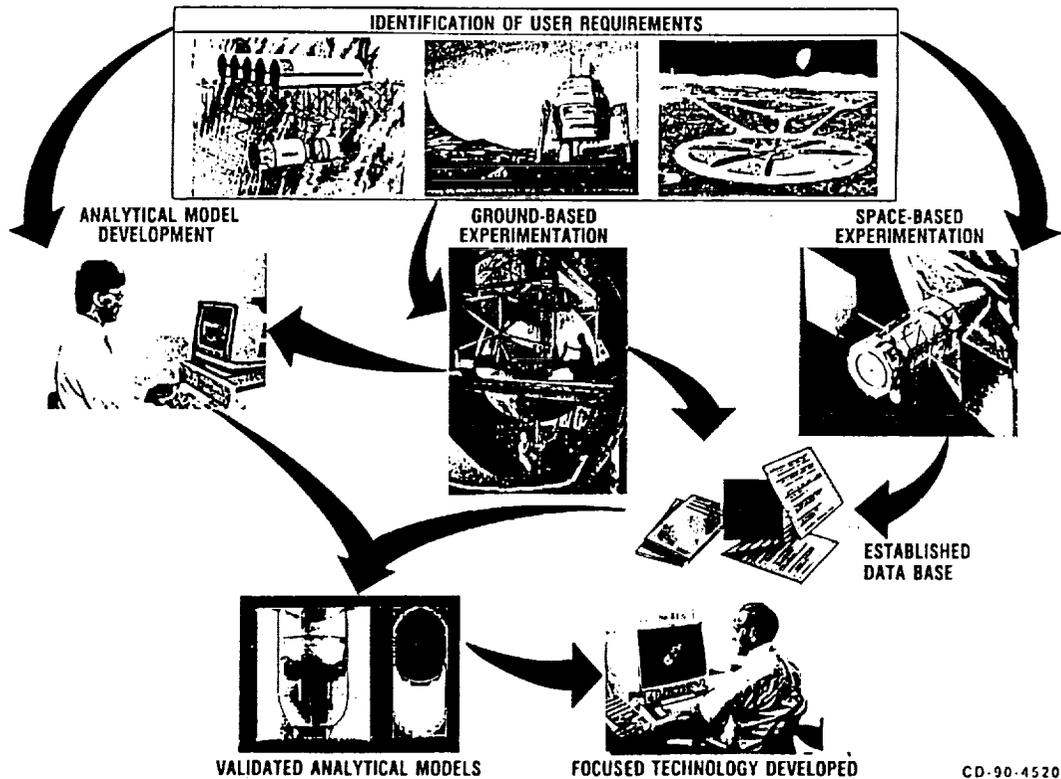

Major benefit of transfer technology is enabling of reusable LTS concepts (Life Cycle Cost Savings of approximately **\$10B** estimated by Martin Marietta)

**Total Benefit for 25 Lunar Missions = \$23 B**

SymonsUTPBenefit3.kad 6-13-91

## Integrated Program

# LeRC CRYOGENIC FLUID MANAGEMENT PROGRAM APPROACH

CD-90-45209

## Cryogenic Fluid Systems

### *Technology Development Approach*

#### Technology Development Approach:

- ▶ Analytical model development efforts to identify key parameters and model basic fluid dynamic, thermodynamic and heat transfer processes
- \* ▶ Analytical model development efforts to enable the performance predictions of future cryogenic fluid systems
- ▶ Small scale ground-based experiments to investigate the basic thermodynamic and fluid dynamic processes; provide proof of concept; parametric testing
- \* ▶ Large scale system testing to provide a more controlled environment for the collection of data for partial analytical model validation and refinement of operational procedures
- \* ▶ Large subscale system demonstrations to integrate flight type components and processes in space simulated thermal and vacuum conditions using fluids of interest in a one-g environment
- ▶ Small scale flight experiments to provide low gravity data necessary to initiate analytical model validation and to provide low-g demonstrations of actual processes with a simulant fluid
- \* ▶ Cryogenic Orbital Nitrogen Experiment (CONE), a subscale cryogenic test bed to provide low-g data necessary for the partial analytical model validation and low-g demonstration of critical components and processes
- \* ▶ Cryogenic Orbital Hydrogen Experiment (COHE), a subscale cryogenic test bed to provide low-g data necessary for completion of analytical model validation

\* Included in Transportation Technology Program

Symposium/Tech Dev Apr 8 & 13 91

### Technology Area - Thermal Control

*Effort:*

- ▶ Thermal performance of thick MLI
- ▶ Purged MLI & foam/MLI ground-hold thermal performance
- ▶ Purged MLI earth-to-orbit venting
- ▶ MLI/vapor shield performance
- ▶ MLI system performance for Lunar/Mars transfer and surface storage

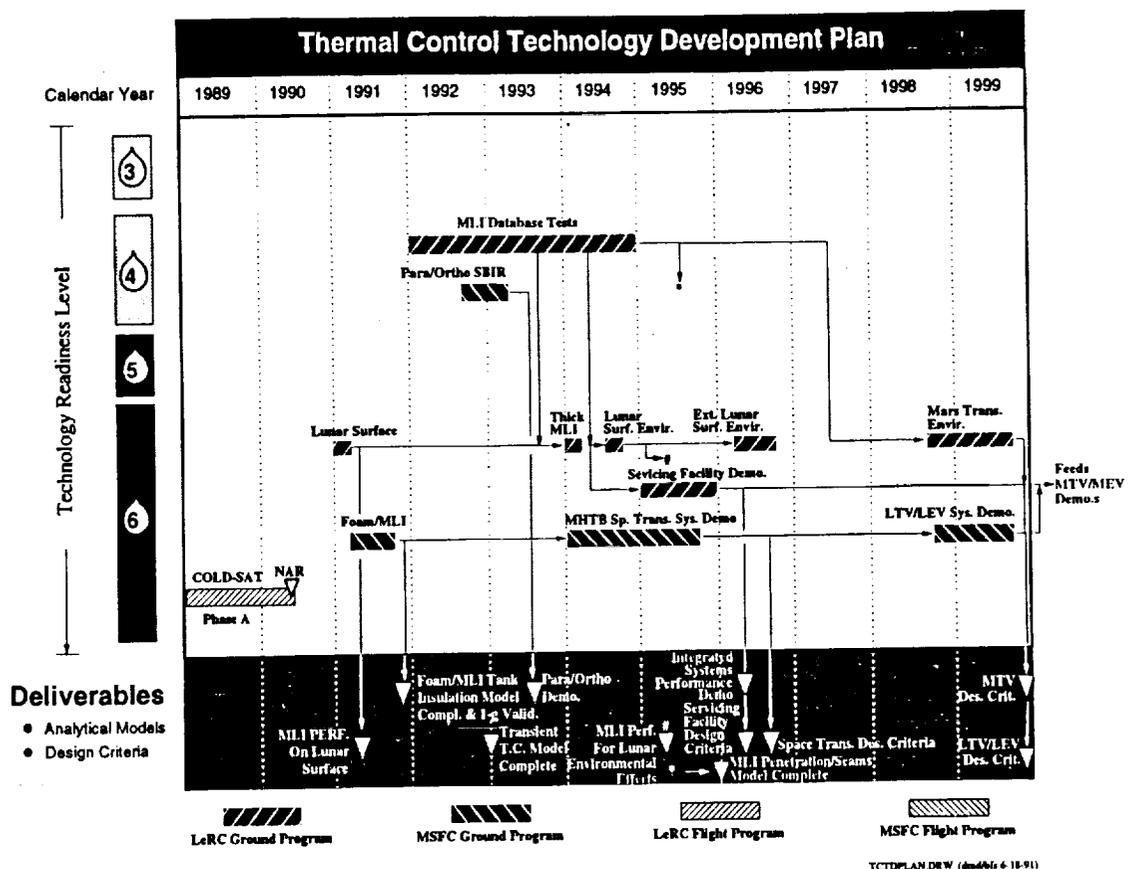

Base R&T Activities

- Generic Analytical Models
- Candidate MLI screening
- MLI seam/penetration tests
- Thick MLI base performance
- Para/ortho conversion (SBIR)

Focused Technology Activities

- Applied analytical models
- Foam/MLI earth-to-orbit performance
- Purged MLI earth-to-orbit performance
- MLI/Vapor Cooled Shield performance
- Large-scale system level tests

Symons/TP/Tech Area Therm con/ Sub 6-13-91

## Technology Area – Pressure Control

### Effort

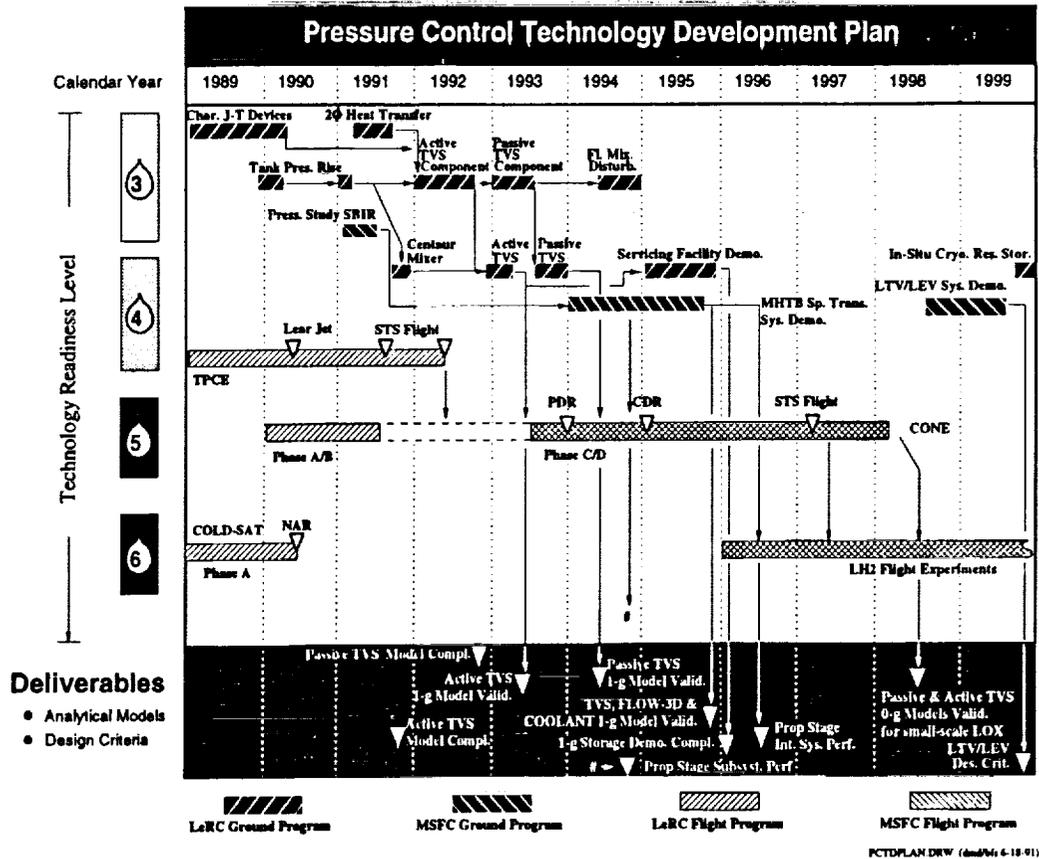

- ▶ Passive TVS thermal performance
- ▶ Active TVS fluid mixing
- ▶ Active TVS heat exchanger thermal performance
- ▶ Thermal stratification and self-pressurization

### Base R&T Activities

- Generic Analytical models
- Passive Heat Exchanger 2-phase heat transfer
- J-T device flow tests
- Active/passive TVS component checkout/performance
- TPCE flight experiment (In-Step)

### Focused Technology Activities

- Thermal stratification and self-pressurization rise
- Active TVS performance
- Passive TVS performance
- Pressure control system demonstration
- CONE Flight Experiment
- COHE Flight Experiment

## Technology Area – Liquid Supply

### Effort

- ▶ LAD performance characteristics
- ▶ Autogenous tank pressurization for liquid transfer
- ▶ Autogenous tank pressurization for engine start/run
- ▶ Autogenous pressurant generator

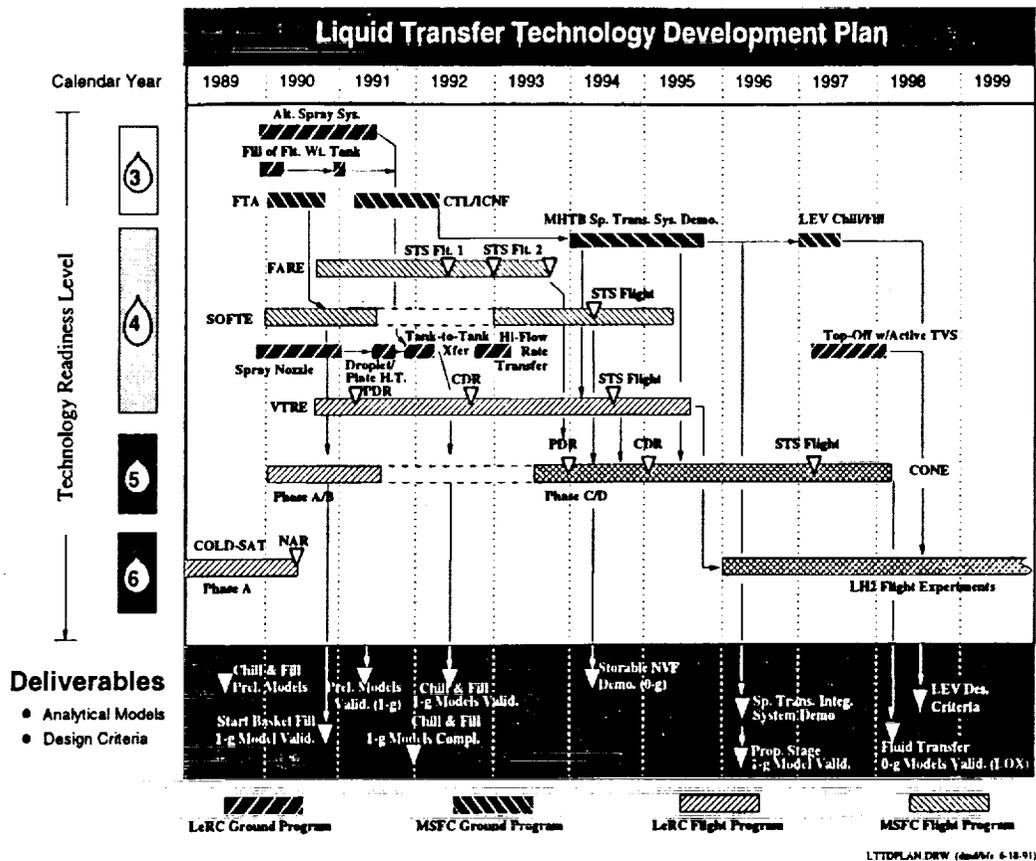

### Base R&T Activities

- Generic analytical models
- LAD screen characterization
- VTRE flight experiment (In-Step)
- Autogenous pressurant generation

### Focused Technology Activities

- Start basket characterization
- Autogenous tank pressurization
- FARE flight experiment
- SOFTE flight experiment
- CONE flight experiment
- COHE flight experiment

## Technology Area – Fluid Handling

### Effort

- ▶ Low-g liquid fluid dynamics (slosh)
- ▶ Low-g fluid dumping/venting
- ▶ Instrumentation (LV sensors, mass gauging, leak detectors, health monitoring)
- ▶ Components (valves, flowmeters, quick disconnects, pressurant generator, TVS mixer)

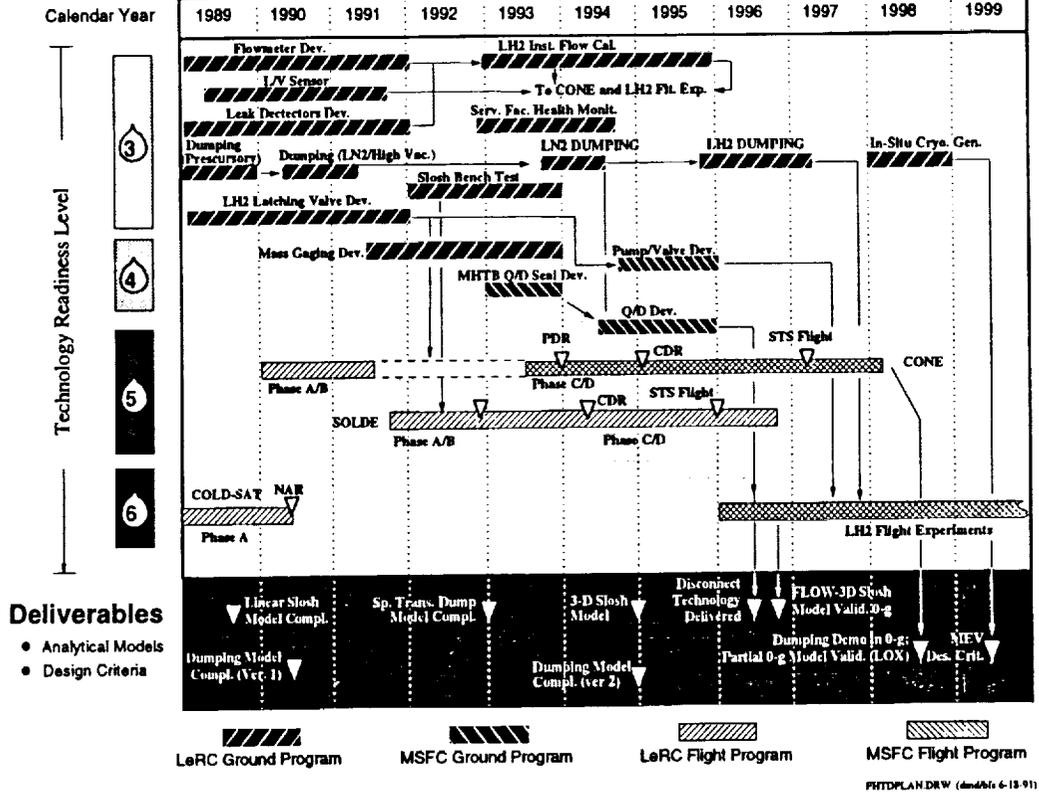

### Base R&T Activities

- Generic analytical models
- Latching valve and two-phase flow meter development
- Fluid dynamics and LV sensor characterization
- Mass gauging characterization
- Dumping/venting characterization
- Leak detector development (SBIR)

### Focused Technology Activities

- Quick disconnect development
- Pressurant generator and TVS mixer development
- Health monitoring development
- SOLDE flight experiment

# Fluid Handling Technology Development Plan

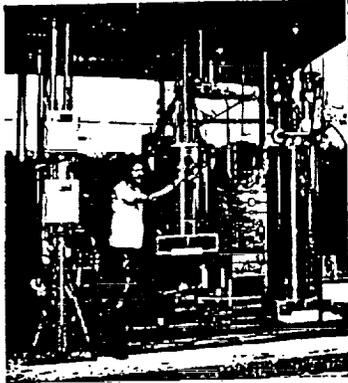

## Test Facilities

**CCL-7**  
**Portable Cryogenic Research Test Rig**

NASA Lewis Research Center  
Cleveland, Ohio

**Purpose:** Provide a liquid hydrogen flow facility for the collection of engineering data for the development of cryogenic components and processes.

Test Capabilities

**Fluid Systems:**

Test Fluid	LH <sub>2</sub> or LN <sub>2</sub>
Dewar Capacities	18, 5, and 1.7 ft <sup>3</sup>
Tank Operating Pressures	2-30 psia
LH <sub>2</sub> Flow Rates	5-100 lb/hr
LN <sub>2</sub> Flow Rates	60-1200 lb/hr
Pressurants	GH <sub>2</sub> , GN <sub>2</sub> and GHe

**Insulation Systems:**

Dewars	10 layers of MLI
Lines	Vacuum Jacket or Foam

**Data Collection:**

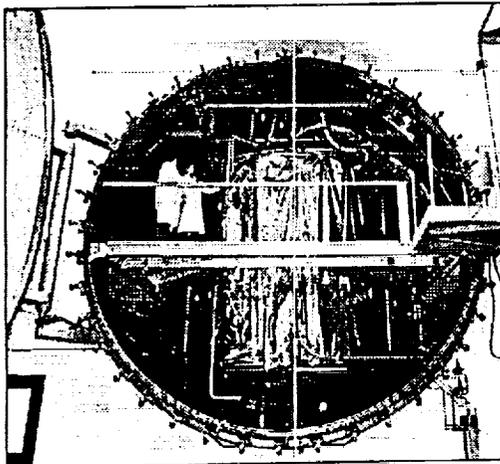

Data System	IBM PC-AT
	256 Channels

CD-89-44302

**K-Site**  
**Cryogenic Propellant Tank Research Facility**

NASA Lewis Research Center  
Plum Brook Station  
Sandusky, Ohio

**Purpose:** Provide ground-based testing of large-scale cryogenic fluid systems for in-space applications using LH<sub>2</sub> in simulated thermal and vacuum environments

Test Capabilities

Tank Fluid	Liquid Hydrogen
Tank Operating Pressures	1-60 psia
LH <sub>2</sub> Flow Rates	100-2000 lb/hr
Pressurants	GH <sub>2</sub> and GHe

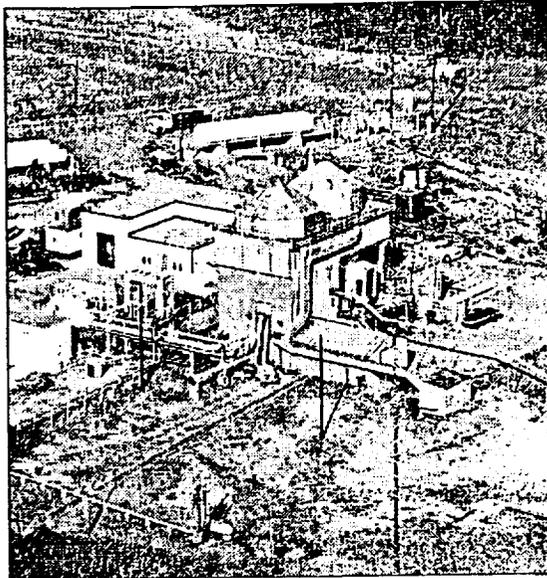

Facility Capabilities

Vacuum	5x10 <sup>-7</sup> torr
- with LH <sub>2</sub> Cryoshroud	5x10 <sup>-6</sup> torr
LH <sub>2</sub> /LN <sub>2</sub> Cryoshroud Temp.	-423 °F/-320 °F
LH <sub>2</sub> Capacity	26,000 gal
Max. Test Package Weight	16,000 lb
Data System	Escort D
	512 Channels

LEWIS SITE CAP. (Rev. 01 10 91)

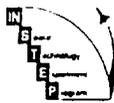

**MSFC Cryogenic Fluid Management Test Facilities  
Test Stand 300**

- Three primary CFM test positions
  - TP 302: 20' by 35' thermal vac. chamber
  - TP 303: 4' by 6' ambient
  - TP 304: 12' by 15.4 ft vacuum chamber
- Utilities
  - GN<sub>2</sub> Supply: 4200 PSIG
  - GH<sub>2</sub> Supply: 4400 PSIG
  - GHe Supply: 4000 PSIG
  - LH<sub>2</sub>: 8000 gallons
- Instrumentation and Control
  - 500 data channels conditioned and digitized
  - 26 coax channels
- History
  - Original test position: 1964
  - 20' thermal vac. chamber (TP302): 1969; modified 1981

MSFC/CFM/INR/PR6-17/1981

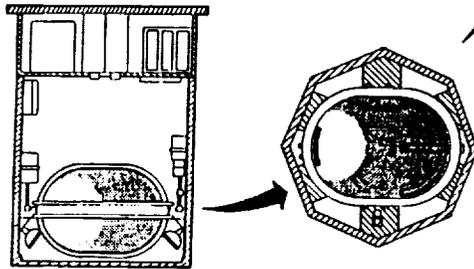

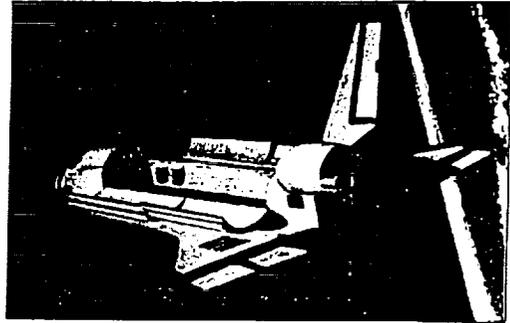

**Technology Flight Experiments**

## TANK PRESSURE CONTROL EXPERIMENT

### DESCRIPTION

- Low-g fluid mixing experiment on STS
- Freon in a plexiglass tank is thermally stratified by heaters and then mixed by an axial jet mixer
- Temperature, pressure, and video data

EXPERIMENT MOUNTS IN GET AWAY SPECIAL CONTAINER

### OBJECTIVES

- Investigate fluid dynamics and thermodynamics of jet mixing as a means of pressure control for future space cryogenic storage tanks
- Obtain data for comparison with ground-based empirical models and computer codes

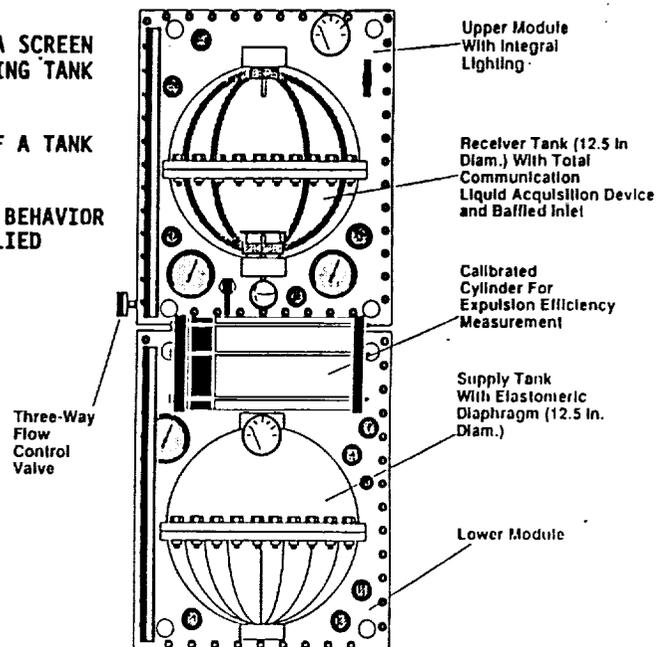

CD-90-49831

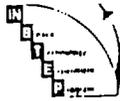

## Fluid Acquisition and Resupply Experiment (FARE)

### FARE I TEST OBJECTIVES

- DEMONSTRATE LOW GRAVITY OPERATION OF A SCREEN CHANNEL LIQUID ACQUISITION DEVICE DURING TANK EXPULSION AND REFILL
- DEMONSTRATE THE LOW GRAVITY VENTING OF A TANK WHILE FILLING
- DEMONSTRATE STATIC AND DYNAMIC LIQUID BEHAVIOR DURING LOW GRAVITY CONDITIONS AND APPLIED ACCELERATIONS

• Envelope:	45" x 22" x 19"
• Weight:	
- Upper Module:	103.6 lb
- Lower Module:	115.2
- Locker Kit:	20.0
<b>Total:</b>	<b>238.8 lb</b>
• Tanks:	
- Material:	Acrylic
- Diameter:	12.5"
- Volume:	1022 In <sup>3</sup>
• Test Fluid:	
- Water + Additives	
- Amount:	5.4 gal

## VENTED TANK RESUPPLY EXPERIMENT (VTRE)

### DESCRIPTION

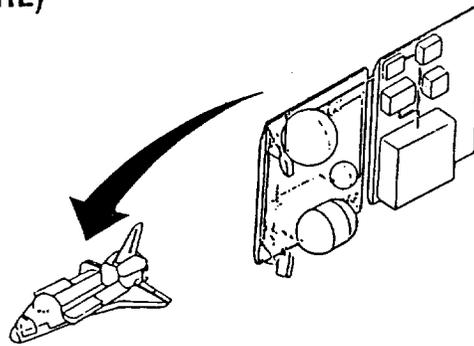

- Low-g fluid management flight experiment to be flown in STS Payload Bay
- Storable fluid is positioned by capillary devices in two plexiglas tanks
- Temperature, pressure, and video data
- Self-contained data and control systems

### PROGRAM OBJECTIVES

- Investigate fluid dynamics and thermodynamics of tank venting for application to future space cryogenic fluid systems
- Demonstrate capillary device performance in low-g

### TECHNICAL OBJECTIVES

- Liquid/Ullage Position Control
- Direct Venting for Tank Pressure Control
- Vented Tank Fill

CD-91-53860

## Transportation Technology Technology Flight Experiments Cryogenic Orbital Nitrogen Experiment

### Objectives

#### Programmatic

Gather zero-g flight data required to validate the cryogenic fluid analysis tools required to design LN2 and LO2 pressure control and liquid transfer systems for SSF and Space Transfer Vehicles; where possible, extrapolate the basic data to partially validate LH2 models

#### Technical

- Pressure Control - Extend cryogenic data to low-g
- Reduce required mixer power by  $10^2$
- Liquid Supply - Demonstrate zero-g acquisition with cryogen
- Liquid Transfer - Partially validate zero-g models for tank chilldown and fill
- Demonstrate zero-g no-vent fill capability

### Schedule

- 1991 Phase B contract completed (SDR)
- 1992 System requirements document completed
- 1993 Phase C/D contract initiated
- 1994 Preliminary design finalized/approved
- 1995 Flight hardware fabrication initiated
- 1995 System-level testing at MSFC initiated
- 1998 STS integration and flight completed
- 1998 Data analyzed and computer models updated
- 1999 Final report on LN2 and LO2 pressure control and liquid transfer issued

### Resources

1993	3.4 M
1994	15.0 M
1995	24.0 M
1996	23.0 M
1997	18.7 M

### Participants

#### Lewis Research Center

Lead Center for CONE project - project management, program requirements, design, analytical model development, data analysis and model validation

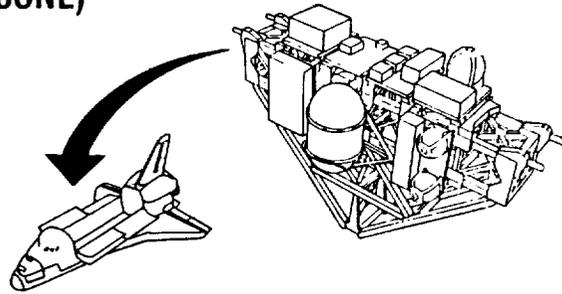

#### Marshall Space Flight Center

Participating Center - input to program requirements, system test and verification requirements, system-level testing of flight hardware and STS integration

Note: This element is closely coordinated with development efforts in NASA/OSF and other related Government programs; resources shown are NASA/OAET only

## CRYOGENIC ORBITAL NITROGEN EXPERIMENT (CONE)

DESCRIPTION
<ul style="list-style-type: none"> <li>• Subcritical liquid nitrogen experiment to be flown in STS cargo bay</li> <li>• Currently designed for Hitchhiker-M carrier</li> <li>• Temperature, pressure, and flow rate data</li> </ul>

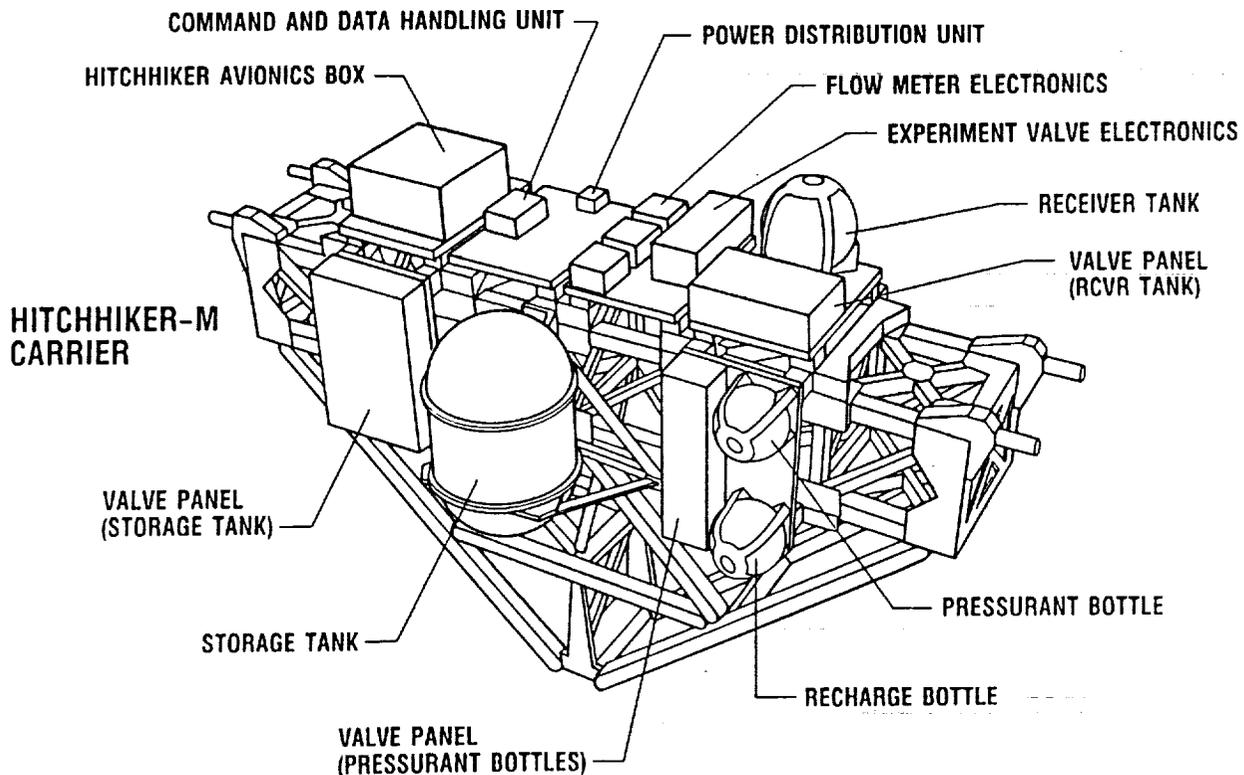

PROGRAM OBJECTIVES
<ul style="list-style-type: none"> <li>• Provide experimental data and component demonstration for the operation of a subscale cryogenic fluid management system in space</li> <li>• Apply results to design of future LOX/LN<sub>2</sub> space systems</li> </ul>

TECHNICAL OBJECTIVES
<ul style="list-style-type: none"> <li>• Experiments for partial model validation                             <ul style="list-style-type: none"> <li>— Active TVS</li> <li>— Nonvented Transfer*</li> </ul> </li> <li>• Critical component and process demonstrations:                             <ul style="list-style-type: none"> <li>— Passive TVS</li> <li>— LAD Expulsion</li> <li>— LAD Fill</li> <li>— Autogenous Pressurization</li> <li>— Thermal Subcooling</li> <li>— Fluid Dumping</li> <li>— Pressurant Generation</li> </ul> </li> </ul>
<p>*Addition of nonvented fluid transfer experiment will occur at beginning of Phase C/D</p>

CD-90-51091

Transportation Technology  
Technology Flight Experiments  
*Cryogenic Orbital Hydrogen Experiment*

*Objectives*

Programmatic

Address critical cryogenic fluid management technologies via system demonstration and space experimentation to validate analytical models and to demonstrate critical components and processes

Technical

- Pressure Control - Active and passive system demos
- Liquid Supply - Capillary acquisition device demo
- Autogenous pressurization system demo
- Liquid Transfer - Validate zero-g models for tank chilldown and no-vent fill
- Fluid Handling - Demonstrate liquid dumping in zero-g
- Mass gauging system evaluation

*Schedule*

- 1994 In-house Phase A/B on LH2 experiment
- 1995 In-house Phase A/B completed
- 1996 Small scale experiments completed
- 1996 Phase C/D contract awarded
- 1997 Procurement/Fab. of long-lead items initiated
- 1998 Subsystem assembly and testing completed
- 1999 System assembly and testing completed
- 2000 Final system checkout complete
- 2001 Experiment launched
- 2003 Data analyzed and computer models updated
- 2004 Final report issued

*Resources*

1996        \$ 3.6 M  
1997        17.0 M

**CRYOGENIC ORBITAL HYDROGEN EXPERIMENT  
(COHE)**

DESCRIPTION
<ul style="list-style-type: none"> <li>• Subcritical liquid hydrogen flight experiment</li> <li>• Preferred carrier: ELV</li> <li>• Temperature, pressure, and flow rate data</li> </ul>

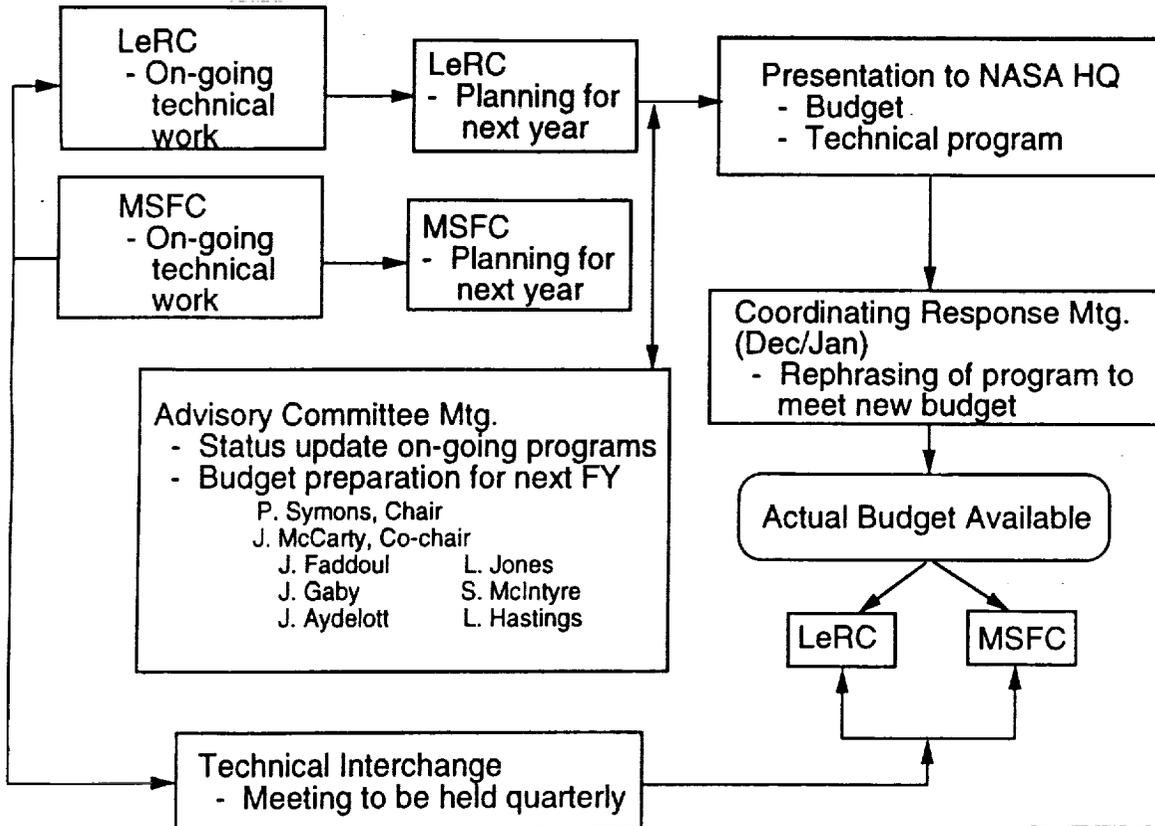

Sample Concept

PROGRAM OBJECTIVES
<ul style="list-style-type: none"> <li>• Provide experimental data and component demonstration for the operation of a subscale cryogenic fluid management system in space</li> <li>• Validate design equations and generate design criteria for large cryogenic fluid systems</li> <li>• Apply results to design of future LH<sub>2</sub> space systems</li> </ul>

TECHNICAL OBJECTIVES
<ul style="list-style-type: none"> <li>• Experimentation for analytical model validation               <ul style="list-style-type: none"> <li>- Active TVS    - Nonvented transfer</li> <li>- Autogenous pressurization</li> </ul> </li> <li>• Critical component and process demonstrations:               <ul style="list-style-type: none"> <li>- Passive TVS    - Thermal subcooling</li> <li>- LAD expulsion - Fluid dumping</li> <li>- LAD fill        - Pressurant generation</li> </ul> </li> </ul>

## Program Coordination

### Cryogenic Fluid Management Program Coordination

- ▶ **Technical Challenge**
  - Develop fundamental understanding of the role that gravity plays in a range of fluid dynamic and thermo dynamic processes which govern the behavior of cryogenic fluid systems in space
  - CFM technologies include thermal control, pressure control, liquid supply, liquid transfer, and fluid handling
- ▶ **Approach**
  - Analytical model development and validation, ground-based testing, and small-scale flight experimentation
- ▶ **Payoff**
  - Analytical models and empirical cryogenic data bases will be developed which can be used to define viable options for a wide range of NASA missions and spacecraft designs
  - Parametric characterization of the performance of thermal control and low-g pressure control techniques will provide the data necessary to design optimized systems for long-term cryogenic storage
- ▶ **Rationale for Augmentation**
  - CFM technology advancement requires comprehensive and broad-based programs using cryogenic liquids to provide required advancement in the SOA for all technologies; cryogenic experiments are expensive
- ▶ **Relationship to Focused Activities and other programs**
  - Base and focused activities are synergistic; base program emphasizes analytical model development and parametric component/process testing; focused program emphasizes large-scale test beds and system demonstrations configured for specific future missions
- ▶ **Technology Contributions**
  - Early fluid dynamics research in drop towers and large-scale cryogenic insulation tests were utilized in the design of Centaur and Apollo stages; however these missions were of significantly shorter duration and the cryos were consumed primarily during high-thrust operations

Symons/TP/Basic R&T Summary  
6-18-91

## **Focused Technology: Cryogenic Fluid Systems (CFS) Summary**

- ▶ **Impact**
  - CFS provides enabling technology and enormous cost savings to almost all future NASA transportation missions (ASE & NTP); increases safety for certain missions
  - Provides life-cycle cost savings for other missions/operations (e.g. ECLSS)
  - Technology allows for space basing of reusable cryogenic fluid systems
  - Majority of technology not mission or architecture specific
- ▶ **User Coordination**
  - Technology requirements developed jointly by several NASA centers and industry
  - Codes RS, RX, RP, RZ, M and S all have provided funding or technology requirements
  - DOD activities are monitored; DOD requirements worked jointly whenever possible
- ▶ **Technical Reviews**
  - Quarterly technical/financial reports submitted to NASA HQ by LeRC and MSFC
  - Annual reviews by SSTAC/ARTS; ad-hoc Cryogenic Technology Advisory Group
- ▶ **Overall Technical and Programmatic Status**
  - During the past two years, significant strides made in reestablishing a world-class ground-based testing capability and in planning and evaluating overall CFS program
  - Ultimately, in-space testing required to validate analytical models and demonstrate critical components and processes
  - Available technology totally inadequate to meet future needs
- ▶ **Major Technical/Programmatic Issues**
  - Absence of a consistent funding source has greatly inhibited the advancement of this critical technology area
  - Recent technology prioritization efforts consistently rank CFS technology at or near top of lists; commensurate funding has not materialized
  - Misconception that cryo experience on the Centaur, Apollo, and Shuttle provides NASA the capability to design long-term, high performance space cryogenic systems -- this myth must be dispelled

Symons/TP/Summary/6-18-91

# Cryogenic Fluids Systems Technology

## Concluding Remarks

- ▶ Advanced cryogenic fluid systems technology is enhancing or enabling to all known transportation scenarios for space exploration
- ▶ An integrated/coordinated program involving LeRC/MSFC has been formulated to address all known CFM needs; new needs should they develop, can be accommodated within available skills/facilities
- ▶ All required/experienced personnel and facilities are finally in place; data from initial ground-based experiments is being collected and analyzed; small scale STS experiments are nearing flight; program is beginning to yield significant results
- ▶ Future proposed funding to primarily come from two sources:

Base R&T  
Focused Transportation Thrust

- ▶ Cryogenic fluid experimentation is essential to provide required technology and assure implementation in future NASA missions

## Transportation Technology Earth-To-Orbit Transportation

### Earth-to-Orbit Propulsion

**OBJECTIVES**

- **Programmatic**  
Develop and validate technology, design tools and methodologies needed for the development of a new generation of lower cost, operationally-efficient, long-life, highly reliable ETO propulsion systems
- **Technical**
  - Manufacturing - High quality, low cost, inspectable
  - Safety - Safe shutdown to fault tolerant ops
  - Maintainability - Condition monitoring diagnostics
  - Ground Ops - Automated servicing and checkout
  - Performance - Max commensurate with life
  - Advanced Cycles - Full flow, combined cycle, etc.

**SCHEDULE**

- 1992 Electronic engine simulation capability operational
- 1993 3D CFD codes for combustion, stability, nozzle and turbomachinery flows validated and documented
- 1995 Low cost manufacturing processes applicable to shuttle and NLS/HLLV propulsion verified and documented
- 1996 System monitoring capability for safe shutdown and for enhanced preflight servicing and checkout demonstrated
- 1999 Probabilistic codes, fatigue methodology and life prediction/damage models validated and documented
- 2005 Advanced manufacturing processes and design methodologies applicable to fully reusable, long-life AMLS propulsion verified and documented; propulsion system monitoring and control for automated operations demonstrated

**RESOURCES:**

	CURRENT	STRATEGIC AUGMENTATION **
• 1991	\$21.8 M	21.8
• 1992	\$28.7 M	28.7
• 1993	\$33.9 M	33.9
• 1994	\$25.1 M	35.4
• 1995	\$26.4 M	36.9
• 1996	\$27.6 M	42.7
• 1997	\$28.8 M	45.1

\* Note: This element is closely coordinated with development efforts in NASA/OSF and other related government programs; resources shown are NASA/OAET only

\*\* Proposed Augmentation eliminated from the 3X program

## ***NASA Earth-To-Orbit Propulsion R&T Program***

### **Purpose**

- Provide an up-to-date technology base to support future space transportation needs

### **Objective**

- Continuing enhancement of knowledge, understanding, and design methodology applicable to the development of advanced oxygen/hydrogen and oxygen/hydrocarbon ETO propulsion systems

### **Justification**

- Space transportation systems can benefit from advancements in propulsion system performance, service life and automated operations and diagnostics

2

## ***NASA Earth-To-Orbit Propulsion R&T Program***

### **Contents**

- Analytical models for defining engine environments and for predicting hardware life (flow codes, loads definition, material behavior, structural response, fracture mechanics, combustion performance and stability, heat transfer)
- Advanced component technology (bearings, seals, turbine blades, active dampers, materials, processes, coatings, advanced manufacturing)
- Instrumentation for empirically defining engine environments, for performance analysis, and for health monitoring ( flow meters, pressure transducers, bearing wear detectors, optical temperature sensors)
- Engineering testing at subcomponent level to validate analytical models, verify advanced materials, and to verify advanced sensor life and performance
- Component/test bed engine for validation/verification testing in true operating environments

## **NASA Earth-to-Orbit Propulsion R&T Program**

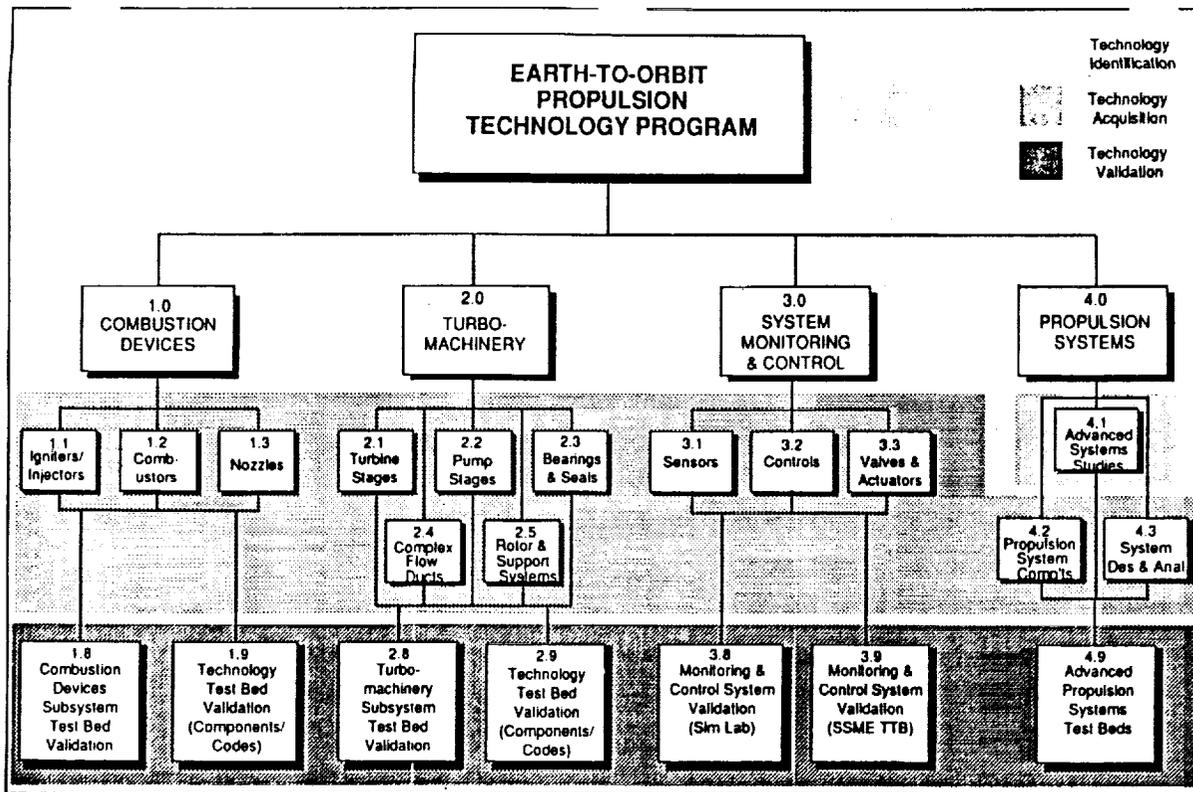

### **Work Breakdown**

- Technology Acquisition phase
  - Seeks improved understanding of the basic chemical and physical processes of propulsion
  - Develops analyses, design models and codes using analytical techniques supported by empirical laboratory data as required
  - Results are obtained through ten discipline working groups
 

<ul style="list-style-type: none"> <li>● Bearings</li> <li>● Structural dynamics</li> <li>● Turbomachinery</li> <li>● Fatigue/fracture/life</li> <li>● Ignition/combustion</li> </ul>	<ul style="list-style-type: none"> <li>● Fluid &amp; gas dynamics</li> <li>● Instrumentation</li> <li>● Controls</li> <li>● Manufacturing/producibility/inspection</li> <li>● Materials</li> </ul>
---	--

## **ETO Propulsion Technology Approach**

- Civil Space Technology Initiative (CSTI) program emphasizes validated technology delivered on schedule.
- Concepts, codes, techniques obtained in the Technology Acquisition Phase.
- Validated at the appropriate level by means of component subsystem or system level testing (TTB).
- OAET provides technology to TTB. OSF provides integration funds to incorporate technology items into TTB.
- Technology is transferred to industry via papers & conferences such as Biannual Propulsion Conference at MSFC and Biannual Structural Durability Conference at LeRC.
  - Technologists also are working flight programs
- Technology must be generic, but should be applicable to on-going or anticipated programs.
  - Goal is to provide a broad technology base that will support a wide variety of propulsion options

INTEGRATED TECHNOLOGY PLAN FOR THE CIVIL SPACE PROGRAM  
**FLIGHT PROGRAMS VISION**

OAET

**OFFICE OF SPACE FLIGHT**

1-1buz-1-197A

***Earth-To-Orbit Propulsion R&T Program Activities***

- Conducted biannual ETO Technology Conference May 15-17, 1990. 123 papers presented. 400 attendees.
- Presented program to Space Technology Interdependency Group (STIG) November 29-30, 1990, Andrews A.F.B.
- Conducted Propulsion Program Review for OAET, December 10-12, 1990.
- Conducted Detailed ALS assessment of ETO Propulsion Project, March 1991, MSFC.
- Conducted 3rd screening of technology items for TTB March 8, 1991.
- Conducted biannual Structural Durability Conference at LeRC, May, 1991.

## **NASA Earth-To-Orbit Propulsion R&T Program**

### Recent Program Highlights

- Silicon nitride bearings have shown greatly extended life over SSME flight bearings in MSFC bearing tester.
- Completed assembly of a cryogenic rolling element bearing tester at LeRC.
- Turbopump test stand design complete. Stand is in MSFC FY94 C of F budget.
- First ever measurement of heat flux on a flight type rocket engine turbine blade with a plug type heat flux sensor.
- Management approval obtained for proceeding with advanced main combustion chamber technology (full scale program).
  - Concept adopted by STME and evolutionary SSME
- CFD Consortium turbine team is interactive with ALS Design Process

13

● Hybrid propulsion	<ul style="list-style-type: none"> <li>● Commercial program; augmented for '95</li> </ul>
● Pressure fed	<ul style="list-style-type: none"> <li>● Residual activity at MSFC, no further work planned after current contracts expire</li> </ul>

14

## ***Focused Technology: ETO Propulsion***

### **Summary**

**IMPACT:** The ETO Propulsion Technology Program supports all advanced engine programs. Half of the 200 tasks in the Program were judged by an ALS consortium contractor team to be directly applicable to ALS propulsion technology needs. ETO addresses the top 3 priority technology issues of the Office of Manned Space Flight.

**USER COORDINATION:** Closely tied to SSME/ALS. SSME review held at Tyson's Corner Va. Oct. 1989. ALS/SSME review held at MSFC February 1990. A special ALS review was held for ALS at MSFC in March 1991. Interagency coordination provided by Space Technology Interdependency Group (STIG).

**TECHNICAL REVIEWS:** Annual RTOP review held in Nov/Dec each year, Government only. Covers each task, technical and budget, in the program. Other reviews as required.

**OVERALL TECHNICAL and PROGRAMMATIC STATUS:** Activities are maturing. Technology items for validation are being developed, such as bearings, sensors, health monitoring algorithms.

**RATIONALE for AUGMENTATION:** Several areas require additional funding, Advanced Manufacturing, Propulsion System Studies and Additional Testing Capability. In addition the combination of budget constraints and the CSTI emphasis on validated technology starves the program of new technologies.

**MAJOR TECHNICAL/PROGRAMMATIC ISSUES:** Several propulsion options are available to the U.S. for the next generation of vehicles. The ETO program must maintain a broad base of technology to address a range of options. In addition, the absence of Program Advanced Development programs makes the ETO program the Nation's propulsion Advanced Development Program by default.

## ADVANCED MAIN COMBUSTION CHAMBER PROGRAM

### ADVANCED MCC

#### PROGRAM OVERVIEW

#### ADVANCE CURRENT MANUFACTURING TECHNOLOGY FOR SPACE HARDWARE

#### DESIGN A MAIN COMBUSTION CHAMBER

- **INVESTMENT CASTINGS (LOW COST)**
  - ROBUST WITH 100% INSPECTABLE WELDS
  - CAPABLE OF UTILIZING ALTERNATE LINERS
    - VACUUM PLASMA SPRAY MATERIALS
    - PLATELET
- **USE SSME PROGRAM**
  - LARGE DATA BASE - NONCONFORMITIES, ETC
  - AVAILABLE TEST FACILITY - TT8
- **USE MSFC PERSONNEL FOR DESIGN EFFORT**

  - ANALYSIS
  - QUALITY
- **USE CONCURRENT ENGINEERING TECHNIQUES**

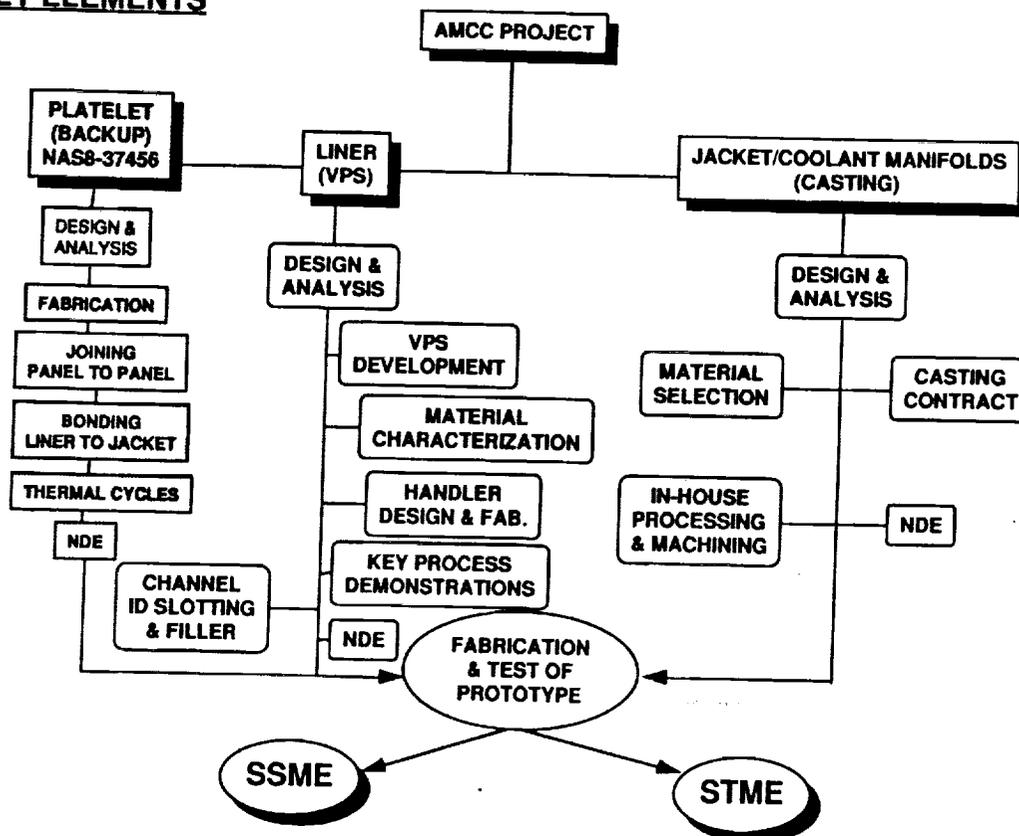

# ADVANCED MCC

## OBJECTIVES - DESIGN CRITERIA

### DESIGN WILL BE:

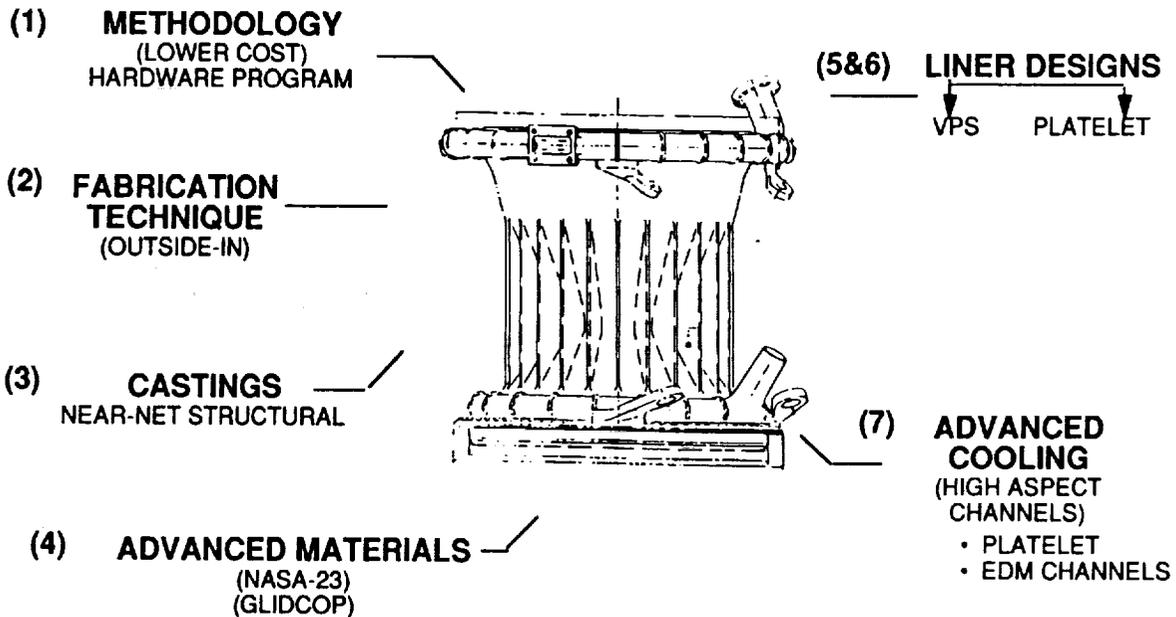

- **INTERCHANGEABLE WITH SSME MAIN CHAMBER**
- **ROBUST DESIGN WITH 100% INSPECTABLE WELDS**
  - HYDROGEN EMBRITTLEMENT RESISTANT MATERIAL
    - NO COPPER COATINGS OR WELD OVERLAYS
  - FMEA/CIL FAILURE MODES REDUCED
  - INCREASED LINER THERMAL MARGIN
- **REDUCED FABRICATION COST** (\$1 MILLION -vs- \$3.2 MILLION)
- **REDUCED FABRICATION TIME** (50 WEEKS -vs- 150 WEEKS)

## KEY ELEMENTS

**ADVANCED  
TECHNOLOGIES**

**ADVANCED  
COMBUSTION CHAMBER  
PROGRAM**

**ADVANCED MCC**

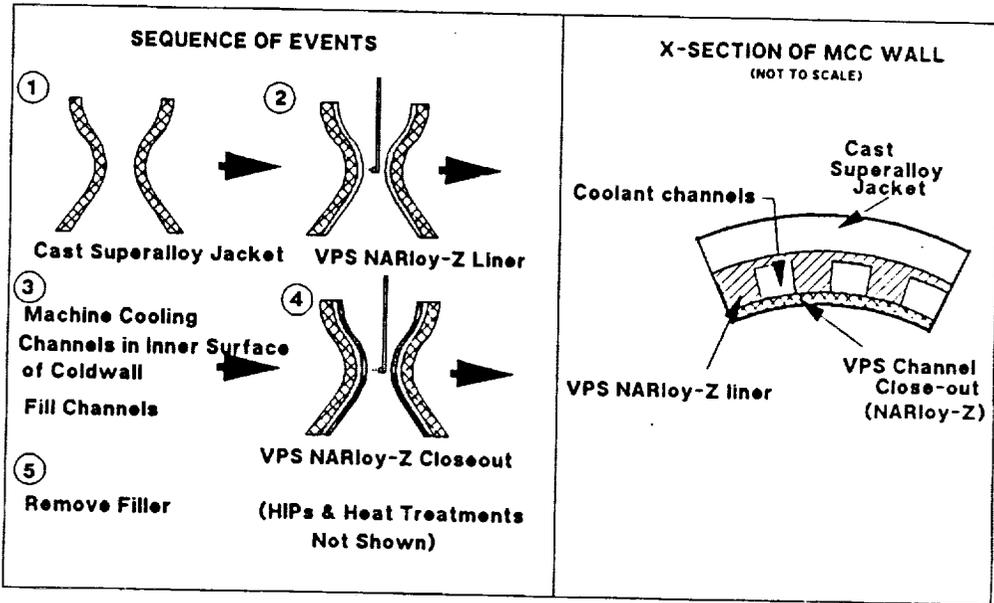

**"NEW " APPROACH TO TECHNOLOGY / HARDWARE PROGRAMS**

- **INHOUSE - PROOF OF CONCEPT**
  - TQM - DETERMINE PRIORITY, APPROACH, LAY OUT OF PROGRAM
  - DESIGN / ANALYSIS / MANUFACTURING - CONCURRENT ENGINEERING
  - FABRICATION - PRODUCIBILITY FACILITY
  - TEST
- **CONTRACTOR - PRODUCTION**
  - FABRICATION OF ADDITIONAL UNITS
  - DEVELOPMENT & CERTIFICATION
  - MAINTAINABILITY & REFURBISHMENT
- **DEMONSTRATE "SOLUTION" IS VALID**
  - QUALITY PRODUCT
  - COST SAVING IN TIMELY MANNER
  - TRAINING - CONFIDENCE THROUGH ACCOMPLISHMENT
  - TEAMWORK - DEVELOPMENT OF NECESSARY INTER-LABORATORIES COOPERATION

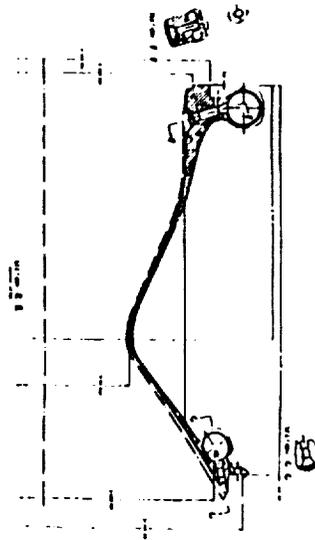

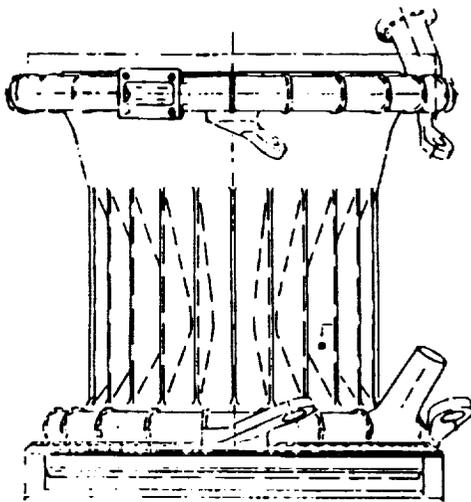

**ADVANCED MCC**

**FABRICATION APPROACH**

**"OUTSIDE - IN"**

**ADVANCED MCC**

AMGC Conceptual Drawing.

---

### Turbomachinery Discipline Specific Technologies

- **Structural Dynamics**

Modeling Related to Structural Dynamic Characteristics to Increase Lifetime, Decrease Weight, Identify Insipient Failures, Decrease Costs, Assess Retrofittable Design Changes, Develop/Validate Design Tools

- **Complex Flow Paths**

Improve Modeling of Coolant Flows and Ducts With CFD Supported By Experimental Validation

- **Materials**

Develop and Evaluate Candidate Materials to Assess Reactivity to High Pressure/Temperature and Oxygen/Hydrogen Environments With Specific Emphasis on Turbine Blades, Bearings, and Seals

- **Manufacturability, Producibility, Inspectability**

Develop/Evaluate Process Techniques, Improve and Optimize Producibility, Improve In-Service Nondestructive Inspection, etc.

- **Rotordynamics**

Improve Rotordynamic Modeling, Diagnostic Procedures, Balancing Methods, Probabilistic Analysis Methods Along With Experimental Validation

- **Fatigue/Fracture/Life**

Develop, Test and Verify Analysis Tools Related Fracture Mechanics, Crack Initiation Life Prediction, Associate Materials Data Base, etc. to Improve Service Life Prediction

## Turbomachinery Large Scale Validation

**Objective:** • Provide Validation of Turbomachinery Design Methods and Hardware Concepts Through

- Bench Testing
- Large Scale Subcomponent Testing
  - Rig Tests
  - Turbopump Tests
- Engine Systems Tests (TTB)
- Compare Data to Most Advanced Computational Methods
  - Stress Methods to Limits
  - Parameter Sensitivity Studies
- Develop Turbomachinery Specific End Products
  - Validated Design Methods
  - Empirical Data Bases
  - Scaling Laws/Methods
  - Design Criteria; Life Limits, Performance,...
  - Advanced Hardware Concepts

# Earth-To-Orbit Turbomachinery Subsystem

## Turbine Stage – Generic Gas Generator

- **Objectives**
  - Enhance and Validate Turbine Design Tools
  - Transfer Advanced Technology to Turbine Design Process
- **Approach**
  - Develop and Implement Plan Cognisant of STME Program Goals
  - Focus Activity Around STME Turbines but Ensure End Products are Generic
  - Establish a Focused Team of Committed Turbine Experts to Drive Technology Transfer and Focus Deliverable Products toward Design Tools
  - Benchmark Codes With Air-Flow Data
  - Establish and Evaluate Advanced Baseline Turbine Stage
  - Fine Tune Baseline and Validate In Air-Flow Test
- **Results**
  - Code Validated for STME – Type Turbine Stage
  - High Turning (160°) Blade Designed/Evaluated
  - Efficiency Increased by 9.8 Percent
  - Single-Stage Turbine Instead of Two
  - Projected Life-Cycle Cost Savings of \$71M

---

### Turbine Stage – Technology Transfer

- **STME LOX turbine design decision: one vs. two stage turbine**
  - LCC - favors one stage (reduction in LCC of 71 million dollars)
  - Risk - comparable
  - Rotordynamic - comparable, slightly favoring one stage
  - Hardware simplicity - favors one stage
  - Turbine stage technology team support available for one stage

By consensus of Aerojet, Pratt and Whitney, and Rocketdyne on November 15, 1990, a one stage oxygen turbopump turbine was recommended and subsequently implemented into the STME design.

### Complex Flow Path – SSME Phase II +

- **Objectives**
  - Validate CFD analysis using air- and water-flow data
  - Evaluate 2-duct versus 3-duct HGM design
- **Approach**
  - Compare CFD results to air- and water-flow tests
  - Apply CFD codes and test rigs to 2-duct and 3-duct HGM designs
- **Results**
  - Good agreement between CFD predicted and measured wall pressures
  - 2-duct manifold results in
    - Lower side loads on turbine end
    - Lower turbine temperatures
    - More benign internal flow environment

**INSTRUMENTATION**

**TECHNOLOGY NEEDS**

- o IMPROVED SENSORS AND MEASUREMENT SYSTEMS FOR BOTH CURRENT AND FUTURE SPACE PROPULSION SYSTEMS IN ORDER TO PROVIDE:
  - o DETAILED MEASUREMENTS FOR CODE VALIDATION IN:
    - o SUBCOMPONENT TESTS IN LABORATORIES.
    - o COMPONENT TESTS IN FACILITIES.
    - o TEST BED ENGINE.
  - o IMPROVED TEST AND LAUNCH STAND INSTRUMENTATION.
- o IMPROVED SENSORS AND SYSTEMS FOR OPERATIONAL ENGINES FOR BOTH:
  - o CONTROL PARAMETERS.
  - o HEALTH MONITORING.

## INSTRUMENTATION

### CHALLENGES

- o THE ENVIRONMENTAL REQUIREMENTS UNDER WHICH THE SENSORS MUST FUNCTION AND THE PARAMETERS TO BE SENSED ARE FREQUENTLY BEYOND CURRENT STATE-OF-THE-ART.
- o MEASUREMENT SYSTEMS FOR CODE VALIDATION MUST BE NON INTRUSIVE (E.G. OPTICAL) OR AT LEAST MINIMALLY INTRUSIVE (E.G. THIN FILM) BECAUSE THE CODES DO NOT ALLOW FOR THE PRESENCE OF A SENSOR.
- o MEASUREMENT SYSTEMS FOR CODE VALIDATION MUST ALSO PROVIDE HIGH TEMPORAL AND SPATIAL RESOLUTION BECAUSE THE CODES ARE USUALLY FINE MESH SOLUTIONS.
- o SENSORS FOR OPERATIONAL ENGINES MUST BE HIGHLY RELIABLE PARTICULARLY WHEN FUTURE LONG TERM MISSIONS ARE CONSIDERED.
- o MEASUREMENT SYSTEMS FOR TEST AND LAUNCH PAD OPERATION MUST REQUIRE MINIMUM MANPOWER AND/OR MAINTENANCE WHILE SURVIVING THE EXTREME ACOUSTIC, VIBRATION, AND THERMAL ENVIRONMENTS DURING LAUNCH.

## INSTRUMENTATION

### APPROACH

- o MAXIMIZE THE USE OF OPTICAL SYSTEMS AND FIBER OPTICS.
- o DEVELOP THIN, SPUTTER DEPOSITED FILM SENSORS.
- o CAPITALIZE ON DEVELOPMENTS IN THE COMPUTER, MICROELECTRONIC, AND LASER TECHNOLOGY FIELDS.
- o BALANCE THE PROGRAM AMONG IN-HOUSE, GRANT, AND CONTRACT WORK.
- o COORDINATE CLOSELY WITH THE OTHER TECHNOLOGY GROUPS, PARTICULARLY CONTROLS.

## INSTRUMENTATION

### BENEFITS

- o RELIABLE SENSORS FOR:
  - o CONTROL AND HEALTH MONITORING.
  - o INCREASED CREDIBILITY OF COMPUTER CODES.
- o MORE DIRECT SENSING OF THE PARAMETER REQUIRED RATHER THAN INDIRECT INFERENCE FROM OTHER MEASUREMENTS.
- o MORE EFFICIENT AND SAFER STAND AND PAD OPERATIONS.
- o GENERIC TECHNOLOGY APPLICABLE NOT ONLY TO EARTH-TO-ORBIT PROPULSION SYSTEMS BUT ALSO TO SPACE BASED PROPULSION SYSTEMS INCLUDING NUCLEAR.

## INSTRUMENTATION

### CURRENT PROGRAM

- o DETAILED MEASUREMENTS FOR CODE VALIDATION IN LABORATORIES, RESEARCH FACILITIES, AND THE TEST BED ENGINE.
  - o THIN FILM THERMOCOUPLES AND HEAT FLUX SENSORS FOR THE TURBINE ENVIRONMENT.
  - o PLUG TYPE HEAT FLUX SENSORS FOR TURBINE TRANSIENTS.
  - o OPTICAL SYSTEMS FOR:
    - o PREBURNER GAS TEMPERATURE.
    - o TURBINE REGION FLOW MEASUREMENT.
    - o 2D STRAIN MEASUREMENTS IN HIGH TEMPERATURE MATERIALS TEST FACILITIES.
    - o HOLOGRAPHIC STRUCTURAL FLAW DETECTION.
    - o OPTICAL SYSTEM ALIGNMENT IN HARSH ENVIRONMENTS USING NEURAL NETWORKS.

## INSTRUMENTATION

### CURRENT PROGRAM (CONT)

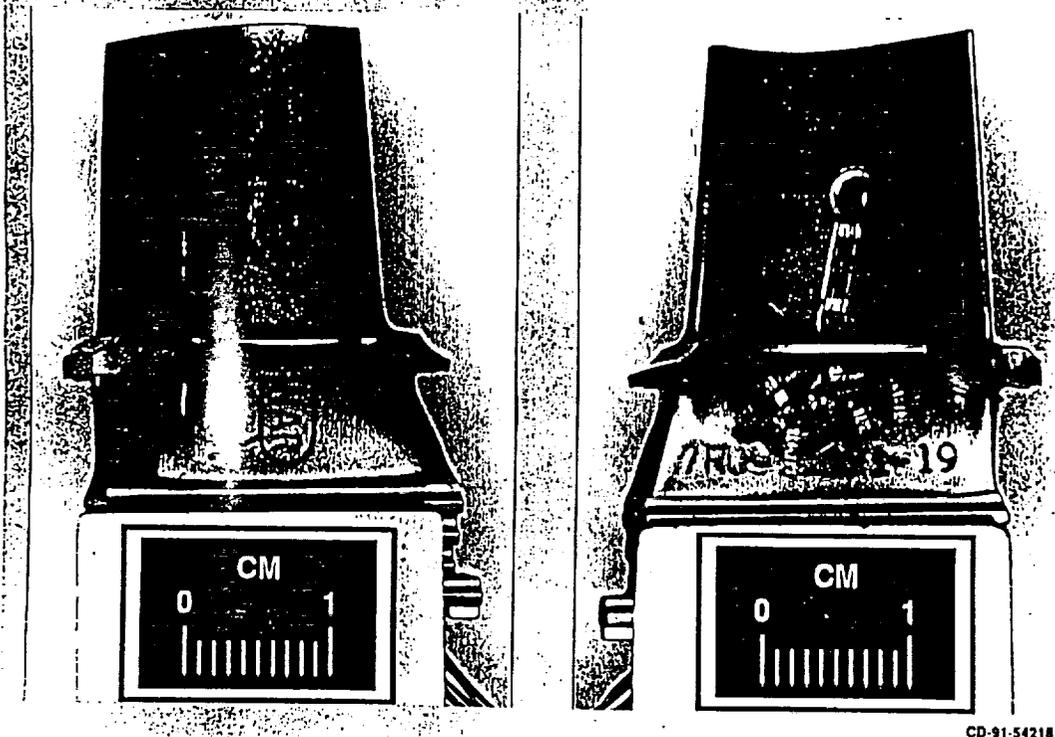

- o IMPROVED TEST AND LAUNCH STAND INSTRUMENTATION.
- o OPTICAL PLUME ANOMALY DETECTION SYSTEM.
- o GASEOUS (H2) LEAK DETECTION USING:
  - o SOLID STATE POINT SENSORS.
  - o REMOTE OPTICAL SYSTEMS.

## INSTRUMENTATION

### CURRENT PROGRAM (CONT)

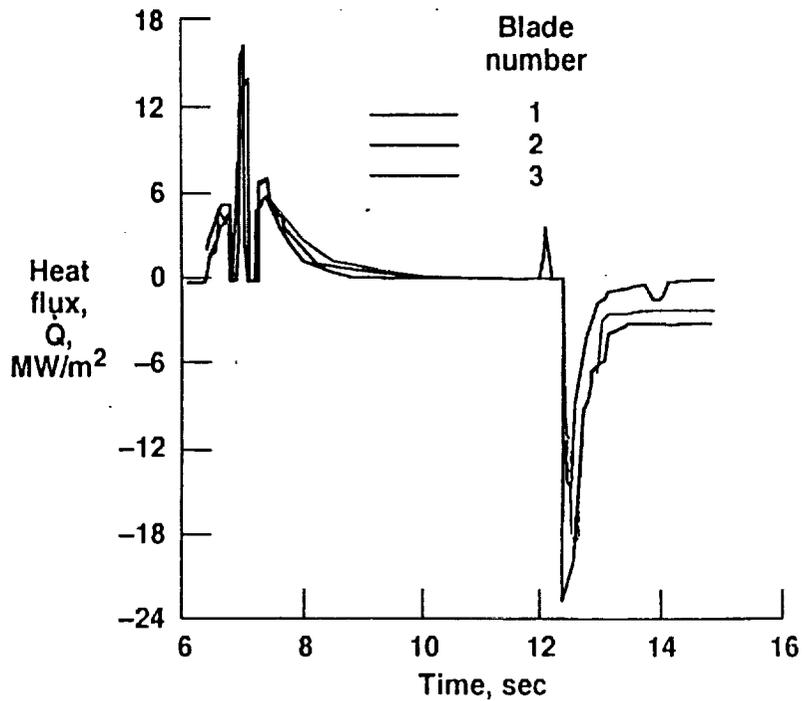

- o IMPROVED SENSORS AND SYSTEMS FOR OPERATIONAL ENGINES FOR BOTH CONTROL AND HEALTH MONITORING.
  - o OPTICAL COMBUSTION CHAMBER GAS SPECIES MEASUREMENT.
  - o FLOWMETERS:
    - o VORTEX SHEDDING.
    - o ULTRASONIC.
    - o TRIBOELECTRIC.
  - o NON-INTRUSIVE SPEED SENSOR FOR TURBOPUMPS.
  - o BEARING DEFLECTOMETER.
  - o TURBINE BLADE PYROMETER.
  - o BRUSHLESS TORQUEMETER.
  - o PRESSURE SENSOR.

### Plug-Type Heat Flux Gage

# Transportation Technology Earth-to-Orbit Propulsion

## Leak Detection

### Technology Needs:

- Develop sensors that detect propellant leakage from cryogenic liquid fueled rocket engines.

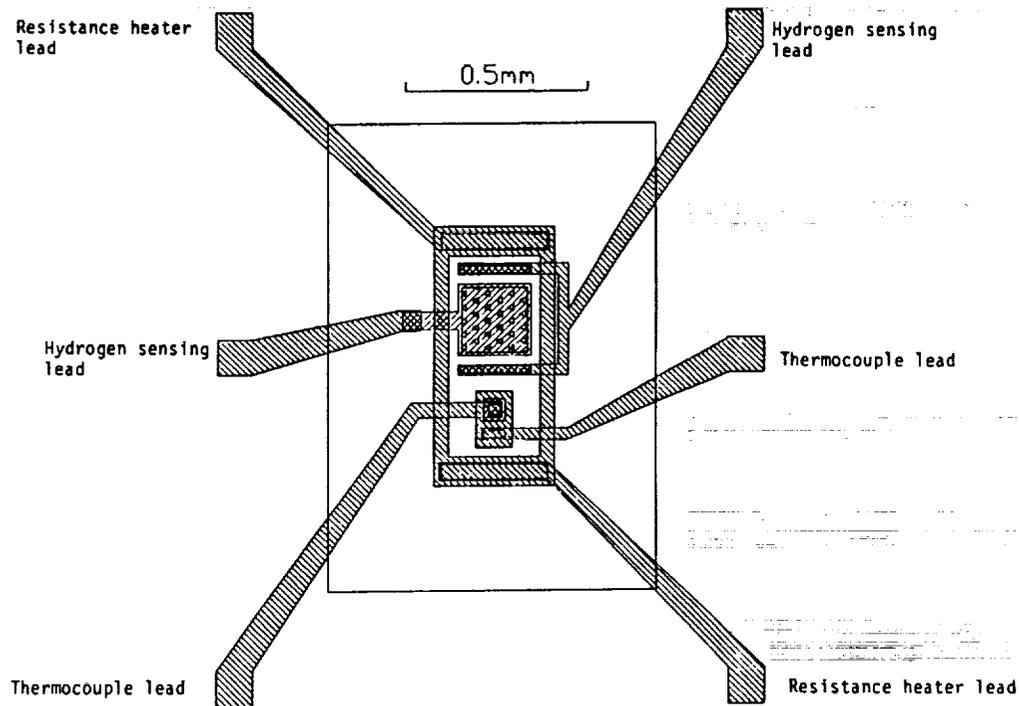

### Technology Challenge:

- Develop hydrogen and oxygen sensors exhibiting:
  - Fast response
  - High sensitivity
  - High spatial resolution
- Harden and package sensors for engine environment.

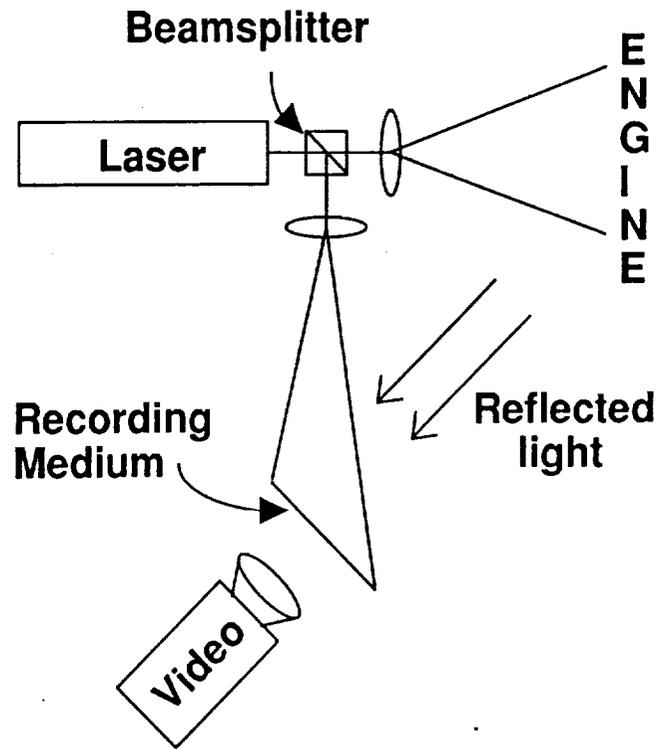

### Benefits:

- Enables real time leak detection of propellants.
- Increases engine/mission safety.

## Mask for Hydrogen Sensor

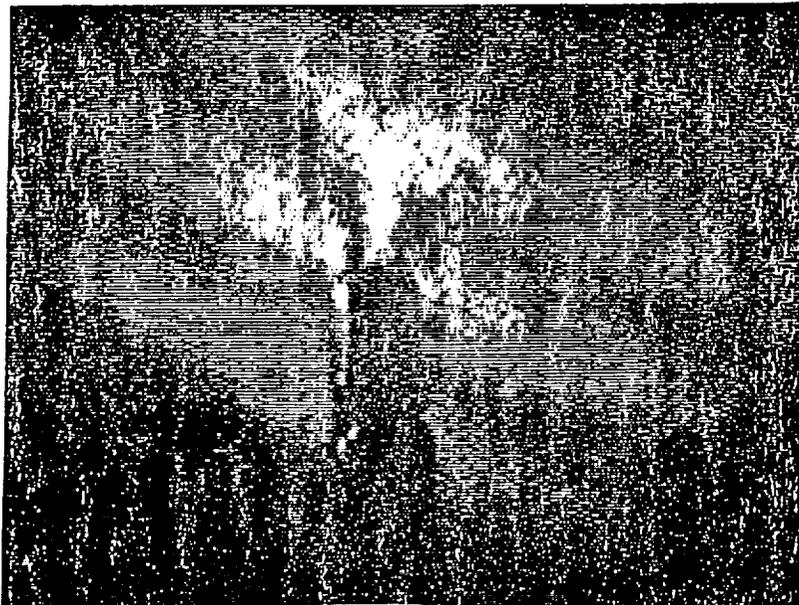

# HOLOGRAPHIC INTERFEROMETRIC CONFIGURATION FOR LEAK DETECTION

SPACE PROPULSION TECHNOLOGY DIVISION

## HOLOGRAPHIC INTERFEROMETRY LEAK DETECTION

HOLOGRAPHIC INTERFEROGRAM OF A LEAKY PIPE FITTING

## INSTRUMENTATION

### AUGMENTED PROGRAM

- o ACCELERATE THE RATE AT WHICH ADVANCED INSTRUMENTATION IS APPLIED.
- o CURRENT PROGRAM IS FOCUSED ON DEVELOPING AND VALIDATING NEW MEASUREMENT CONCEPTS IN THE LABORATORY.
- o CURRENT FUNDING LEVELS PERMIT THE DEVELOPMENT OF ONE (OR A FEW) PROTOTYPE MEASUREMENT SYSTEMS FOR FIELD APPLICATIONS.
- o AUGMENTED FUNDING WOULD ALLOW MORE RAPID APPLICATION OF NEW MEASUREMENT TECHNOLOGY.
- o SPECIFIC EXAMPLES INCLUDE:
  - o HYDROGEN LEAK DETECTION SYSTEMS.
  - o THIN FILM SENSORS.
  - o ADVANCED FLOW, TEMPERATURE, AND TORQUE SENSORS.
  - o OPTICAL DIAGNOSTIC SYSTEMS.

## INSTRUMENTATION

### AUGMENTED PROGRAM (CONT)

- o DEVELOP NEW AND UPGRADE EXISTING INSTRUMENTATION TEST FACILITIES TO ENHANCE RESEARCH PRODUCTIVITY.
  - o NEW FACILITY FOR HYDROGEN LEAK DETECTION SYSTEM TEST AND CALIBRATION.
  - o NEW FACILITY FOR THE EXPOSURE OF SENSORS, MATERIALS SAMPLES, COATINGS, AND OTHER SMALL ITEMS TO HOT (BURNING) HYDROGEN AT ELEVATED PRESSURES AND UNDER TRANSIENT FLOW AND TEMPERATURE CONDITIONS.
  - o UPGRADE THE EXISTING LERC HEAT FLUX CALIBRATION FACILITY.

**Sensor Autodiagnosis and Autocalibration**

**Technology Needs:**

- Develop capability to enable in-situ, autonomous sensor failure detection/diagnosis and sensor self calibration

S10-81  
157477  
P-13

**Technology Challenge:**

- Model sensor with autodiagnostic/autocal capabilities
- Incorporate autodiagnostic/autocal capabilities without major modification or redesign of sensor

**Benefits:**

- Increased sensor reliability
- Reduced sensor maintenance requirements
- Enables sensors to be fault tolerant
- Eliminates "false alarm" shutdowns

Transportation Technology  
Earth-to-Orbit Propulsion

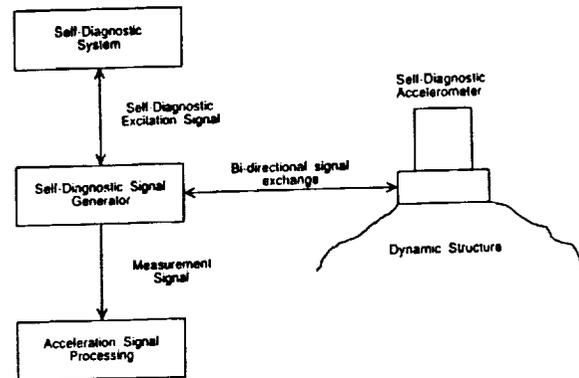

**Autodiagnostic and Autocalibration Program**

**Current Program:**

- Develop and implement autodiagnostic/autocalibration capabilities into piezoelectric accelerometer.
- Test on MSFC TTBE.

**Augmented Program**

- Develop and extend technology to other types of sensors such as:
  - Flowmeters
  - Thermocouples
  - Pressure transducers

# Transportatio.. Technology Earth-to-Orbit Propulsion

---

## Plume Diagnostics

### Technology Needs:

- Develop plume diagnostic capabilities for ground test and flight rocket engines.

### Technology Challenge:

- Develop engine ground testing plume diagnostic capabilities
- Develop engine mounted optics and spectrometer.
- Develop codes to extract safety, health and performance information from plume spectral data.

### Benefits:

- Enables rocket engine safety, health and performance monitoring with a single instrument.

# Transportatio.. Technology Earth-to-Orbit Propulsion

---

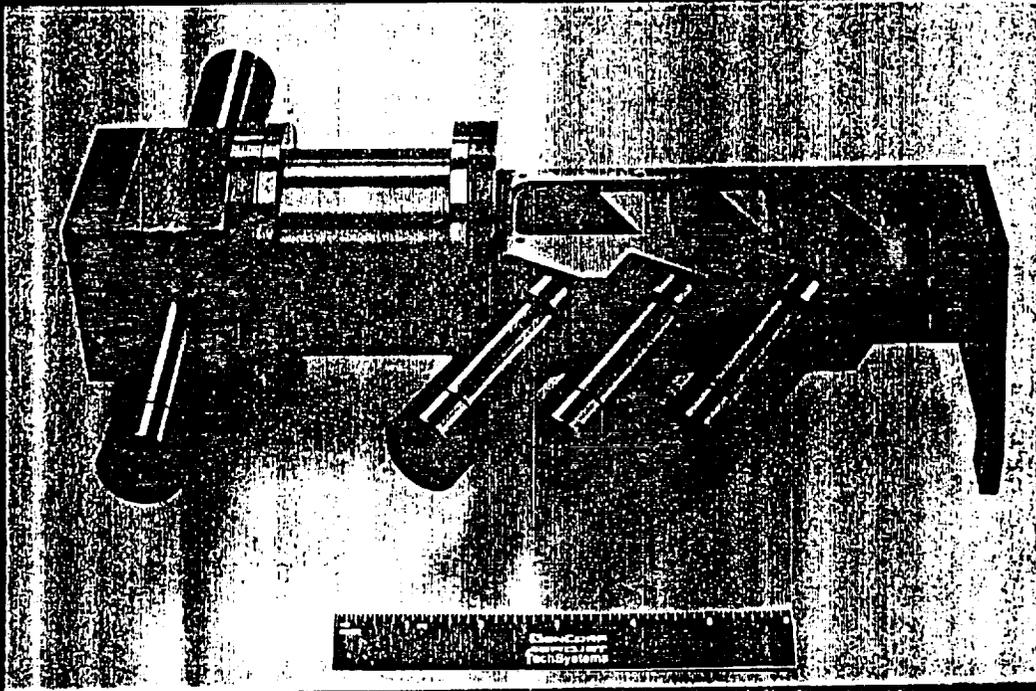

## Plume Diagnostics Program

### Current Program:

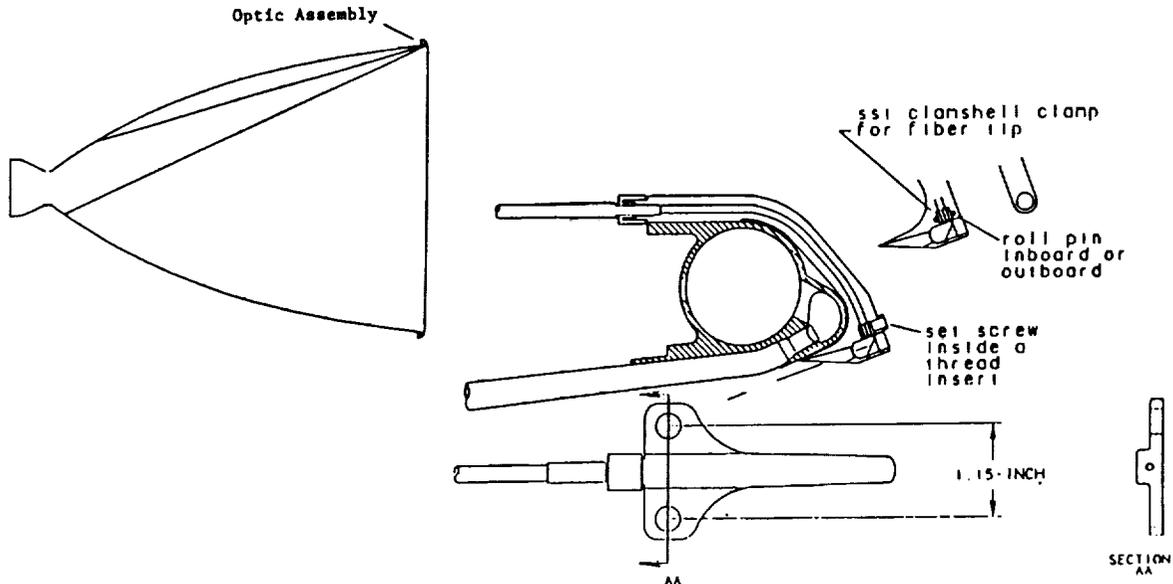

- Monitoring TTBE spectral emisisions (OPAD).
- Monitoring emissions across the TTBE exit plane.
- Development of nozzle mounted optic assembly and high resolution spectrometer for SSME.
- Develop code to extract species/alloy information from plume spectral data.

### Augmented Program

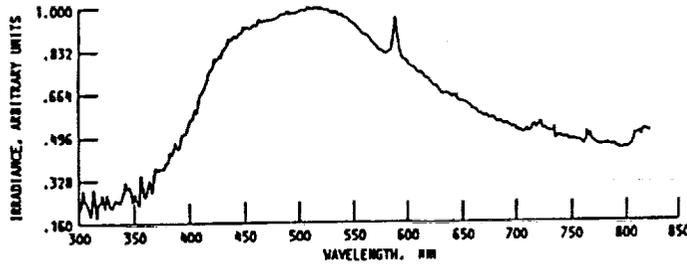

- Develop code(s) to model and predict spectral emissions from a high pressure/high temperature combustion process.

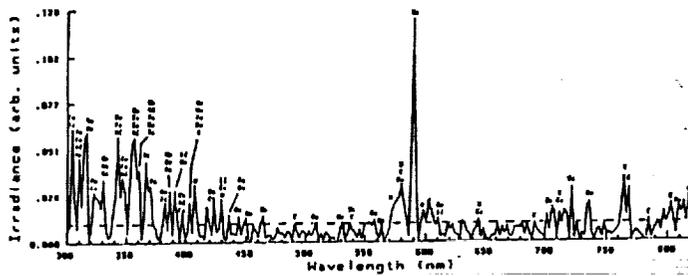

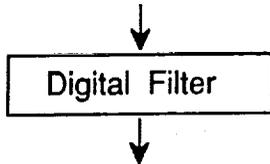

**SSME Nozzle/throat Optic Assembly**

Separation and Extraction of Plume Phenomena

"Raw" Spectrum

"Processed" Spectrum

**Transportation Technology  
Earth-To-Orbit Transportation**

**FAILURE MODELING**

**NEED:** CAPABILITY TO MODEL FAILURE AND DEGRADATION BEHAVIOR OF ROCKET ENGINE, BOTH STEADY STATE AND TRANSIENT.

- APPROACH:**
- DEVELOP GENERIC SUB-COMPONENT FAILURE MODELS (BEARINGS, INJECTORS, MANIFOLDS).
  - DEVELOP TOOL FOR LINKING SUB-COMPONENT FAILURE MODELS TO DEFINE THE SYSTEM MODEL..
  - VERIFY FAILURE MODEL CAPABILITY USING OPERATION DATA FROM BOTH TEST AND FLIGHT ENGINES.
  - USE FAILURE MODELS TO DEVELOP DIAGNOSTIC, PROGNOSTIC, AND CONTROL ALGORITHMS TO BE USED IN HEALTH MONITORING SYSTEM FOR PRESENT AND FUTURE ENGINES.
  - USE FAILURE MODELS TO PROVIDE FEEDBACK TO THE DESIGN AND DEVELOPMENT PROCESS.

**Transportation Technology  
Earth-To-Orbit Transportation**

**FAILURE MODELING**

- BENEFIT:**
- PROVIDE FAILURE DATA TO DEVELOP ALGORITHMS AND HEALTH MONITORING SYSTEMS PRIOR TO ACTUAL ROCKET ENGINE DEVELOPMENT.
  - ACTUAL ROCKET ENGINE FAILURES ARE BOTH COSTLY AND INFREQUENT. FAILURE MODELS CAPABILITY WILL PROVIDE A "RICH" FAILURE DATABASE WITH MINIMUM HARDWARE AND SAFETY IMPACTS.

**DELIVERABLE:**

- Current:**
- o TOOL FOR LINKING SUB-COMPONENTS TO DEFINE SYSTEM MODEL
  - o INJECTOR FAILURE MODEL SPECIFIC TO SSME
- Augmented:**
- o GENERIC FAILURE MODELS OF KEY ROCKET ENGINE SUB-COMPONENTS
  - o VALIDATE FAILURE MODELS CAPABILITY USING SSME DATA

**Transportation Technology  
Earth-To-Orbit Transportation**

**MASS DATA STORAGE AND RETRIEVAL**

- NEED:**
- o A validated engine flight data recorder, based on either digital or optical theory, that allows for increased bandwidth storage capability. Coupled with validated expert system and data base technologies to provide extensive archival search and retrieval techniques for the massive and disparate data required for diagnostics and prognostics.

- APPROACH:**
- o Design and develop advanced techniques for fast access and large bandwidth for mass data storage and retrieval.
  - o Design and develop techniques and database with smart retrieval capabilities.

# Transportation Technology Earth-To-Orbit Transportation

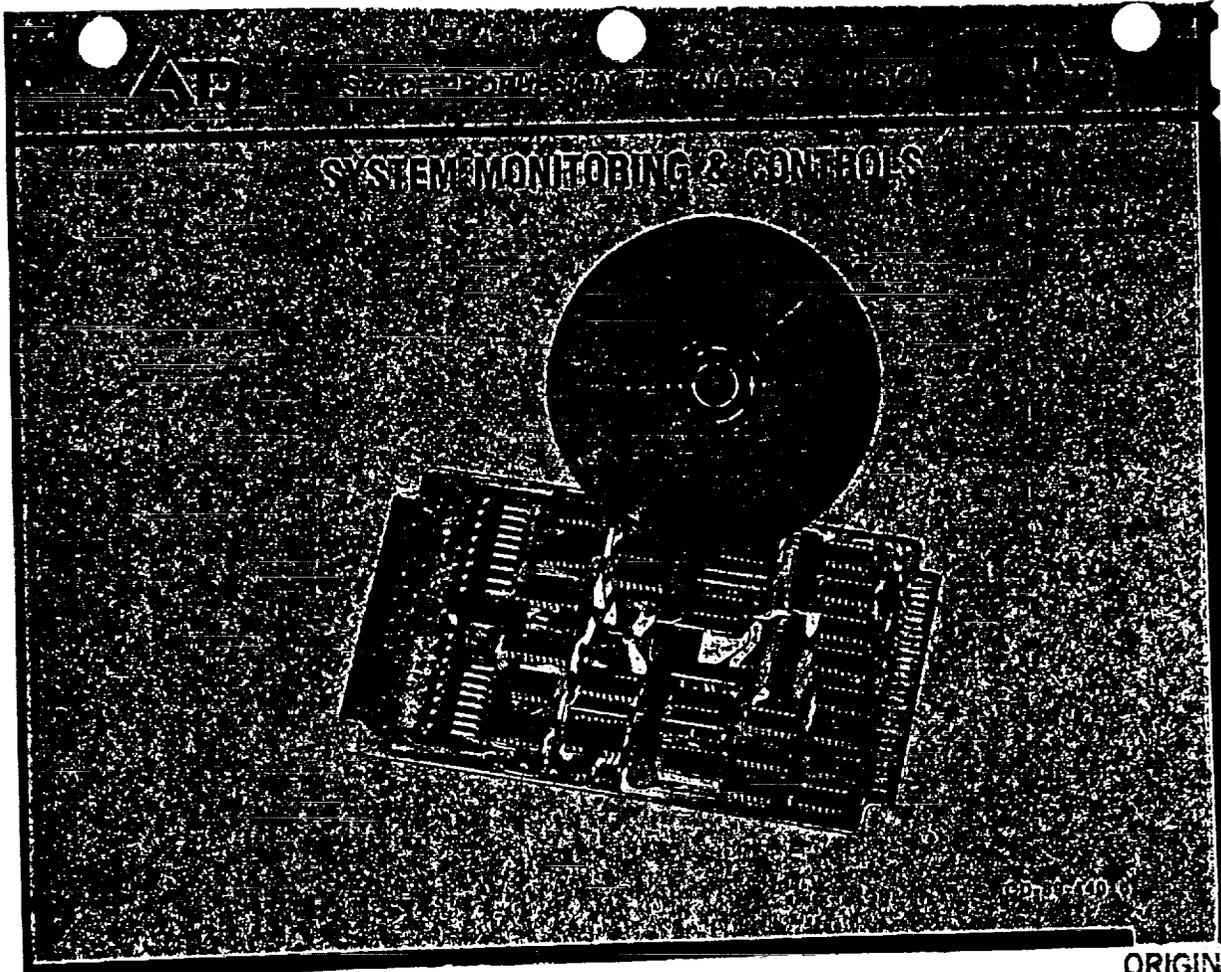

## MASS DATA STORAGE AND RETRIEVAL

### BENEFITS:

- o Ability to provide fast access and large mass data storage capability. Required to accommodate future engine and instrumentation needs.
- o A highly correlated, compatible, and expandable retrieval system that provides more rapid turn around time, more efficient use of resources more thorough use of review data, and more consistent historical trending records.

### DELIVERABLES:

- Current:
- o A flight mass data management and storage system for rocket engines.
  - o An integrated test firing, inspection and historical component and engine database that allows for easy access and retrieval of data for diagnostics, prognostics and maintenance.
- Augmented:
- o Preprocessing for quicker data retrieval, and sensor measurement validation.

**Transportation Technology  
Earth-To-Orbit Transportation**

---

**FIBER OPTIC INSTRUMENTATION BUS**

**NEED:**      **ADVANCED ROCKET ENGINE INSTRUMENTATION SYSTEM THAT OFFERS SAFER, MORE COMPACT, HIGHER-THROUGHPUT, AND EMI-RESISTANT COMMUNICATION.**

- APPROACH:**
- **DESIGN A FIBER-OPTIC INSTRUMENTATION SYSTEM SUITABLE FOR ROCKET ENGINE APPLICATIONS.**
  - **SELECT, DEVELOP OR MODIFY SUITABLE COMPONENTS AND EVALUATE IN RELEVANT ENVIRONMENT**
  - **BUILD AND DEMONSTRATE SENSOR BUS ON COMPONENT AND ROCKET ENGINE TEST BEDS.**

**Transportation Technology  
Earth-To-Orbit Transportation**

---

**FIBER OPTIC INSTRUMENTATION BUS**

**BENEFITS:**

- **PROVIDE INSTRUMENTATION SYSTEM THAT IS FASTER, SAFER, LIGHTER, AND EMI-IMMUNE**
- **FACILITATE USE OF ADVANCED OPTICAL SENSORS**
- **IMPROVE STATE-OF-THE-ART IN OPTICAL FIBER TECHNOLOGY**

**DELIVERABLES:**

- Current:**
- **TEST SOME COMMERCIAL FIBER OPTIC COMPONENTS IN CRYOGENIC AND HIGH TEMPERATURES. (ST,MIL-STD, MULTI-FIBER, AND DUAL FIBER CONNECTORS, FIBER CABLES, AND COUPLERS)**
- Augmented:**
- **COMPONENTS DEVELOPED AND DEMONSTRATED FOR USE ON ADVANCED ROCKET ENGINES**
  - **INTEGRATED OPTICAL SENSOR BUS DEVELOPED AND DEMONSTRATED FOR ROCKET ENGINE APPLICATIONS**

**Transportation Technology  
Earth-To-Orbit Transportation**

**MODEL BASED DIAGNOSTICS**

**NEED:** AUTOMATED MODEL-BASED DIAGNOSTIC CAPABILITY FOR ROCKET ENGINES

**APPROACH:**

- DEVELOP QUALITATIVE REASONING TECHNIQUES FOR ROCKET ENGINE DIAGNOSTICS:
  - DEVELOP GENERIC TOOL FOR CREATING SYSTEM MODELS AND ANALYZING RESULTS.
  - APPLY TOOL TO ROCKET ENGINE COMPONENTS AND SYSTEMS. DEMONSTRATE CAPABILITIES OF TOOL
- INTEGRATE MODEL WITH HEALTH MONITORING TECHNIQUES TO DIAGNOSE THE SOURCE OF A DETECTED FAILURE.

**Transportation Technology  
Earth-To-Orbit Transportation**

**MODEL BASED DIAGNOSTICS**

**BENEFITS:**

- PROVIDES MODEL-BASED DIAGNOSTIC ALGORITHMS WHICH CAN EXECUTE IN NEAR-REAL-TIME
- MODEL-BASED DIAGNOSTICS OFFER MORE COMPLETE COVERAGE THAN RULED-BASED TECHNIQUES OF SIMILAR COMPLEXITY

**DELIVERABLES:**

- Augmented:**
- ANALYSIS AND DIAGNOSIS TOOLS
  - USER INTERFACE FOR SYSTEM DEFINITION AND DISPLAY OF RESULTS
  - VERIFICATION OF MODELS OF ROCKET ENGINE COMPONENTS AND SYSTEMS.

**SAFETY MONITORING SYSTEM (SMS)**

**OBJECTIVES:**

- Provide increased safety on the test stand, while maintaining a path to flight.
- Complement the current redline system with the SMS to detect anomalies earlier.

**APPROACH:**

- Validate SMS algorithms.
- Integrate algorithms with hardware.
- Demonstrate anomaly detection on TTB.

**SMS MAJOR RESULTS**

- 100% detection of faults for 15 test cases
- Low false alarm rate
- Covers all phases of SSME operation including power transients
- Robust to sensor loss (clustering)
- Significant improvement in fault detection times
- Not complex

**ALGORITHM PERFORMANCE - DETECTION TIME IN SECONDS**

**CONTROLS & REAL TIME DIAGNOSTICS**

**TECHNOLOGY NEED**

**IMPROVE THE SURVIVABILITY AND DURABILITY OF REUSABLE ROCKET ENGINES THROUGH THE USE OF INTELLIGENT CONTROLS AND REAL TIME DIAGNOSTICS**

**TECHNOLOGY CHALLENGES**

- o INTEGRATION OF FAULT DETECTION AND CONTROL MODES TO FORM INTELLIGENT CONTROL WITH INCREASED FUNCTIONALITY AND AUTONOMY
- o RELIABLE (i.e. NO FALSE ALARMS), REAL TIME FAULT DETECTION ALGORITHMS
- o REAL TIME DIAGNOSTIC ALGORITHMS THAT ACCURATELY PORTRAY ENGINE CONDITION
- o IMPLEMENTATION OF DIAGNOSTIC AND CONTROL ALGORITHMS IN COMPUTER HARDWARE
- o LIFE EXTENDING CONTROL ALGORITHMS WHICH IMPROVE ENGINE PERFORMANCE AND LIFE
- o MODELING AND REAL TIME SIMULATION OF ROCKET ENGINES
- o SENSORS FOR CONDITION MONITORING
- o ELECTROMECHANICAL ACTUATORS

## CONTROLS & REAL TIME DIAGNOSTICS

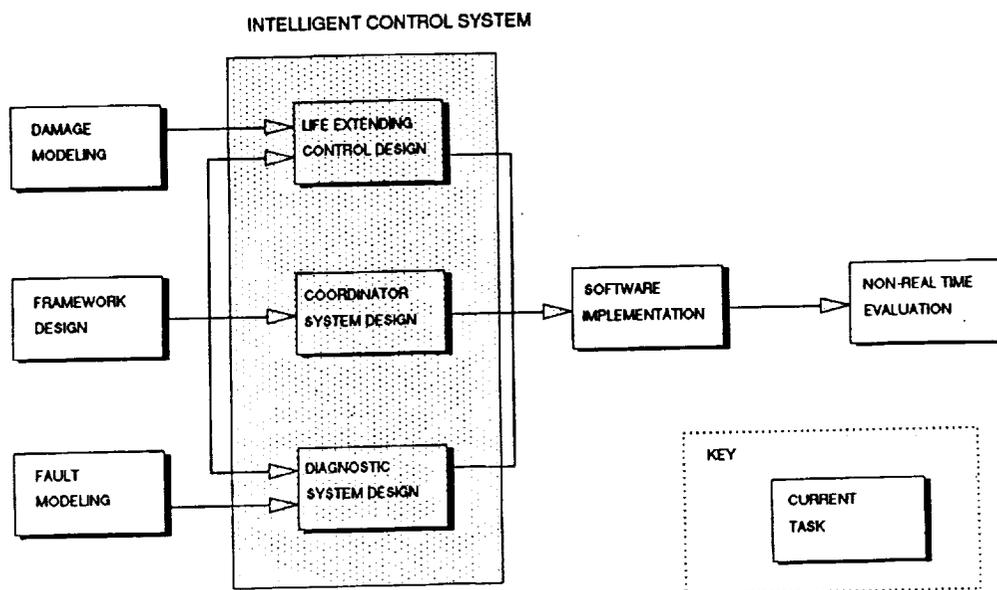

### APPROACH

- o DESIGN AND ANALYZE ALTERNATIVE FAULT DETECTION, CONDITION MONITORING, AND CONTROL STRATEGIES.
- o IMPLEMENT THE MOST SUCCESSFUL STRATEGIES IN SOFTWARE/HARDWARE PROTOTYPES
- o INTEGRATE THE PROTOTYPES INTO A VALIDATION SYSTEM
- o VALIDATE THE STRATEGY BY REAL TIME SIMULATION AND ENGINE TEST
- o COORDINATE CLOSELY WITH THE OTHER TECHNOLOGY GROUPS, PARTICULARLY INSTRUMENTATION.

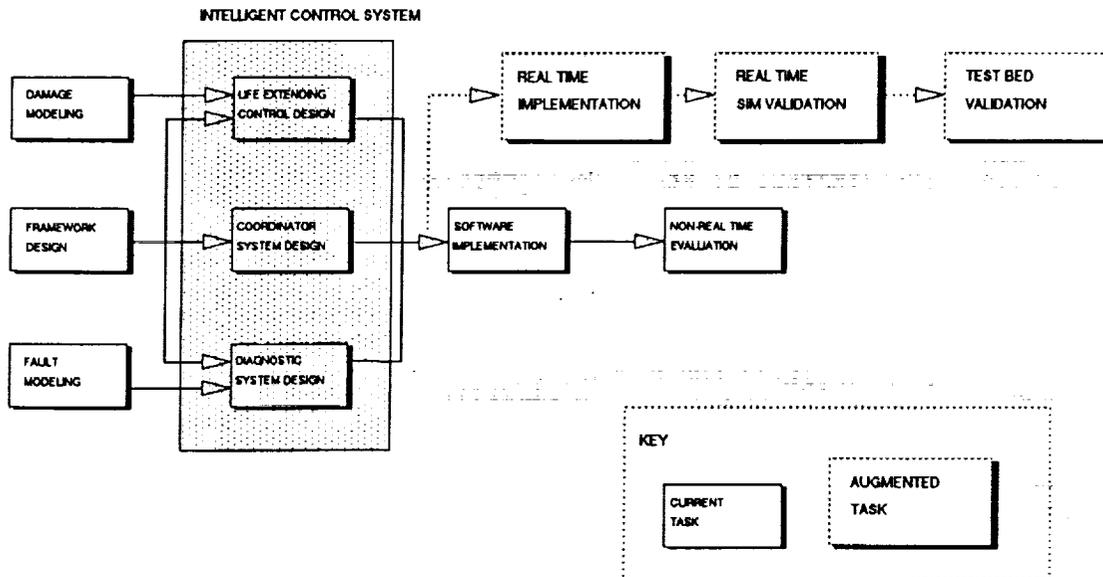

### PAYOFFS

- o IMPROVED SURVIVABILITY FOR PROPULSION SYSTEM
- o IMPROVED ENGINE PERFORMANCE AND DURABILITY
- o ENHANCED SAFETY FOR PROPULSION SYSTEM AND VEHICLE
- o ENHANCED SAFETY FOR GROUND TEST OF ENGINES
- o INCREASED CONTROL SYSTEM RELIABILITY, FUNCTIONALITY, AND AUTONOMY
- o REDUCED ENGINE LIFE CYCLE AND MAINTENANCE COSTS
- o REDUCED CONTROL SYSTEM COST AND WEIGHT

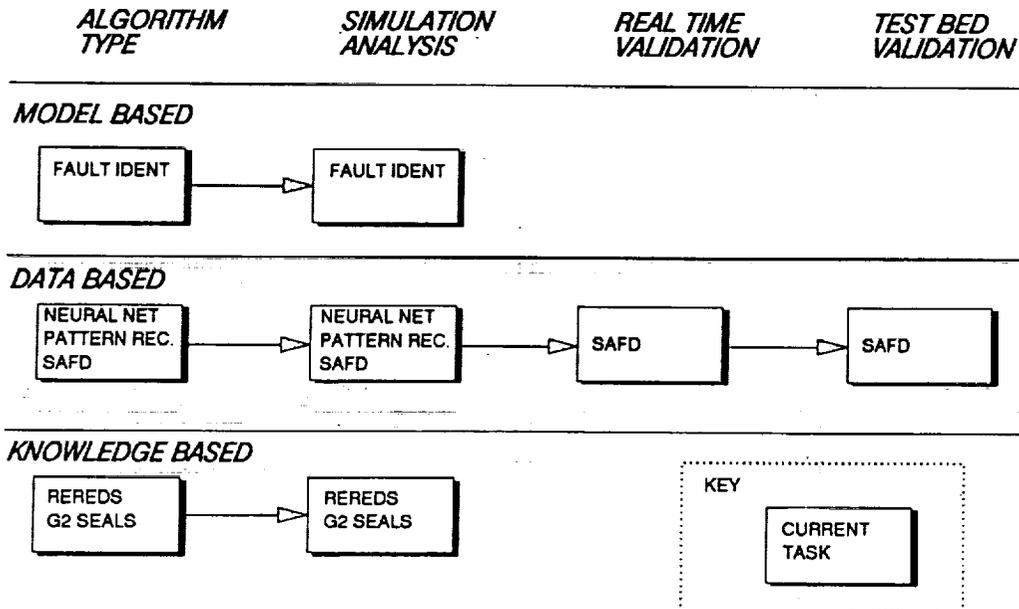

## CURRENT INTELLIGENT CONTROLS PROGRAM

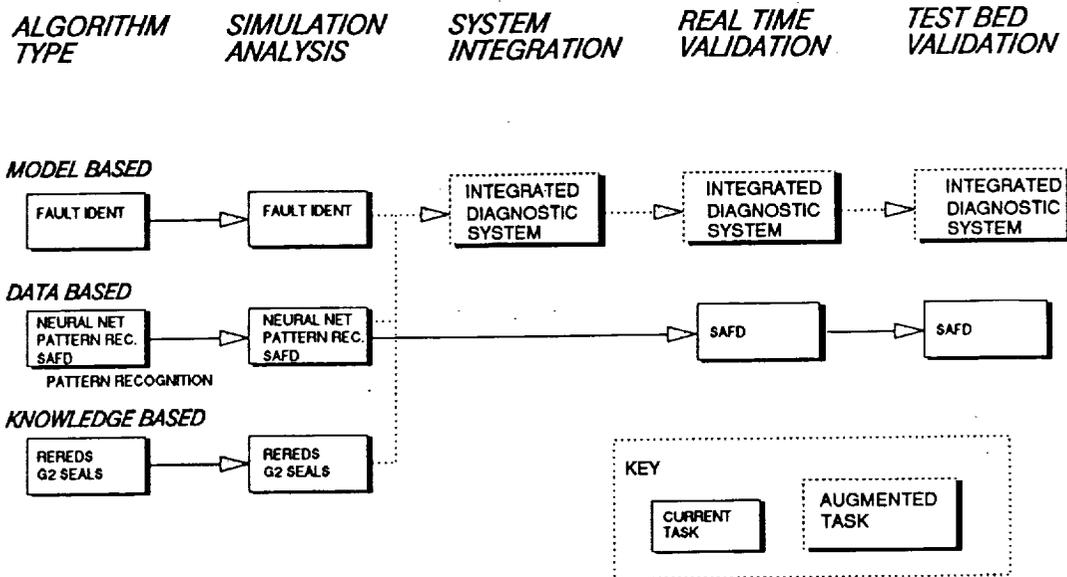

## AUGMENTED INTELLIGENT CONTROLS PROGRAM

## CURRENT REAL TIME DIAGNOSTICS PROGRAM

## AUGMENTED RT DIAGNOSTICS PROGRAM

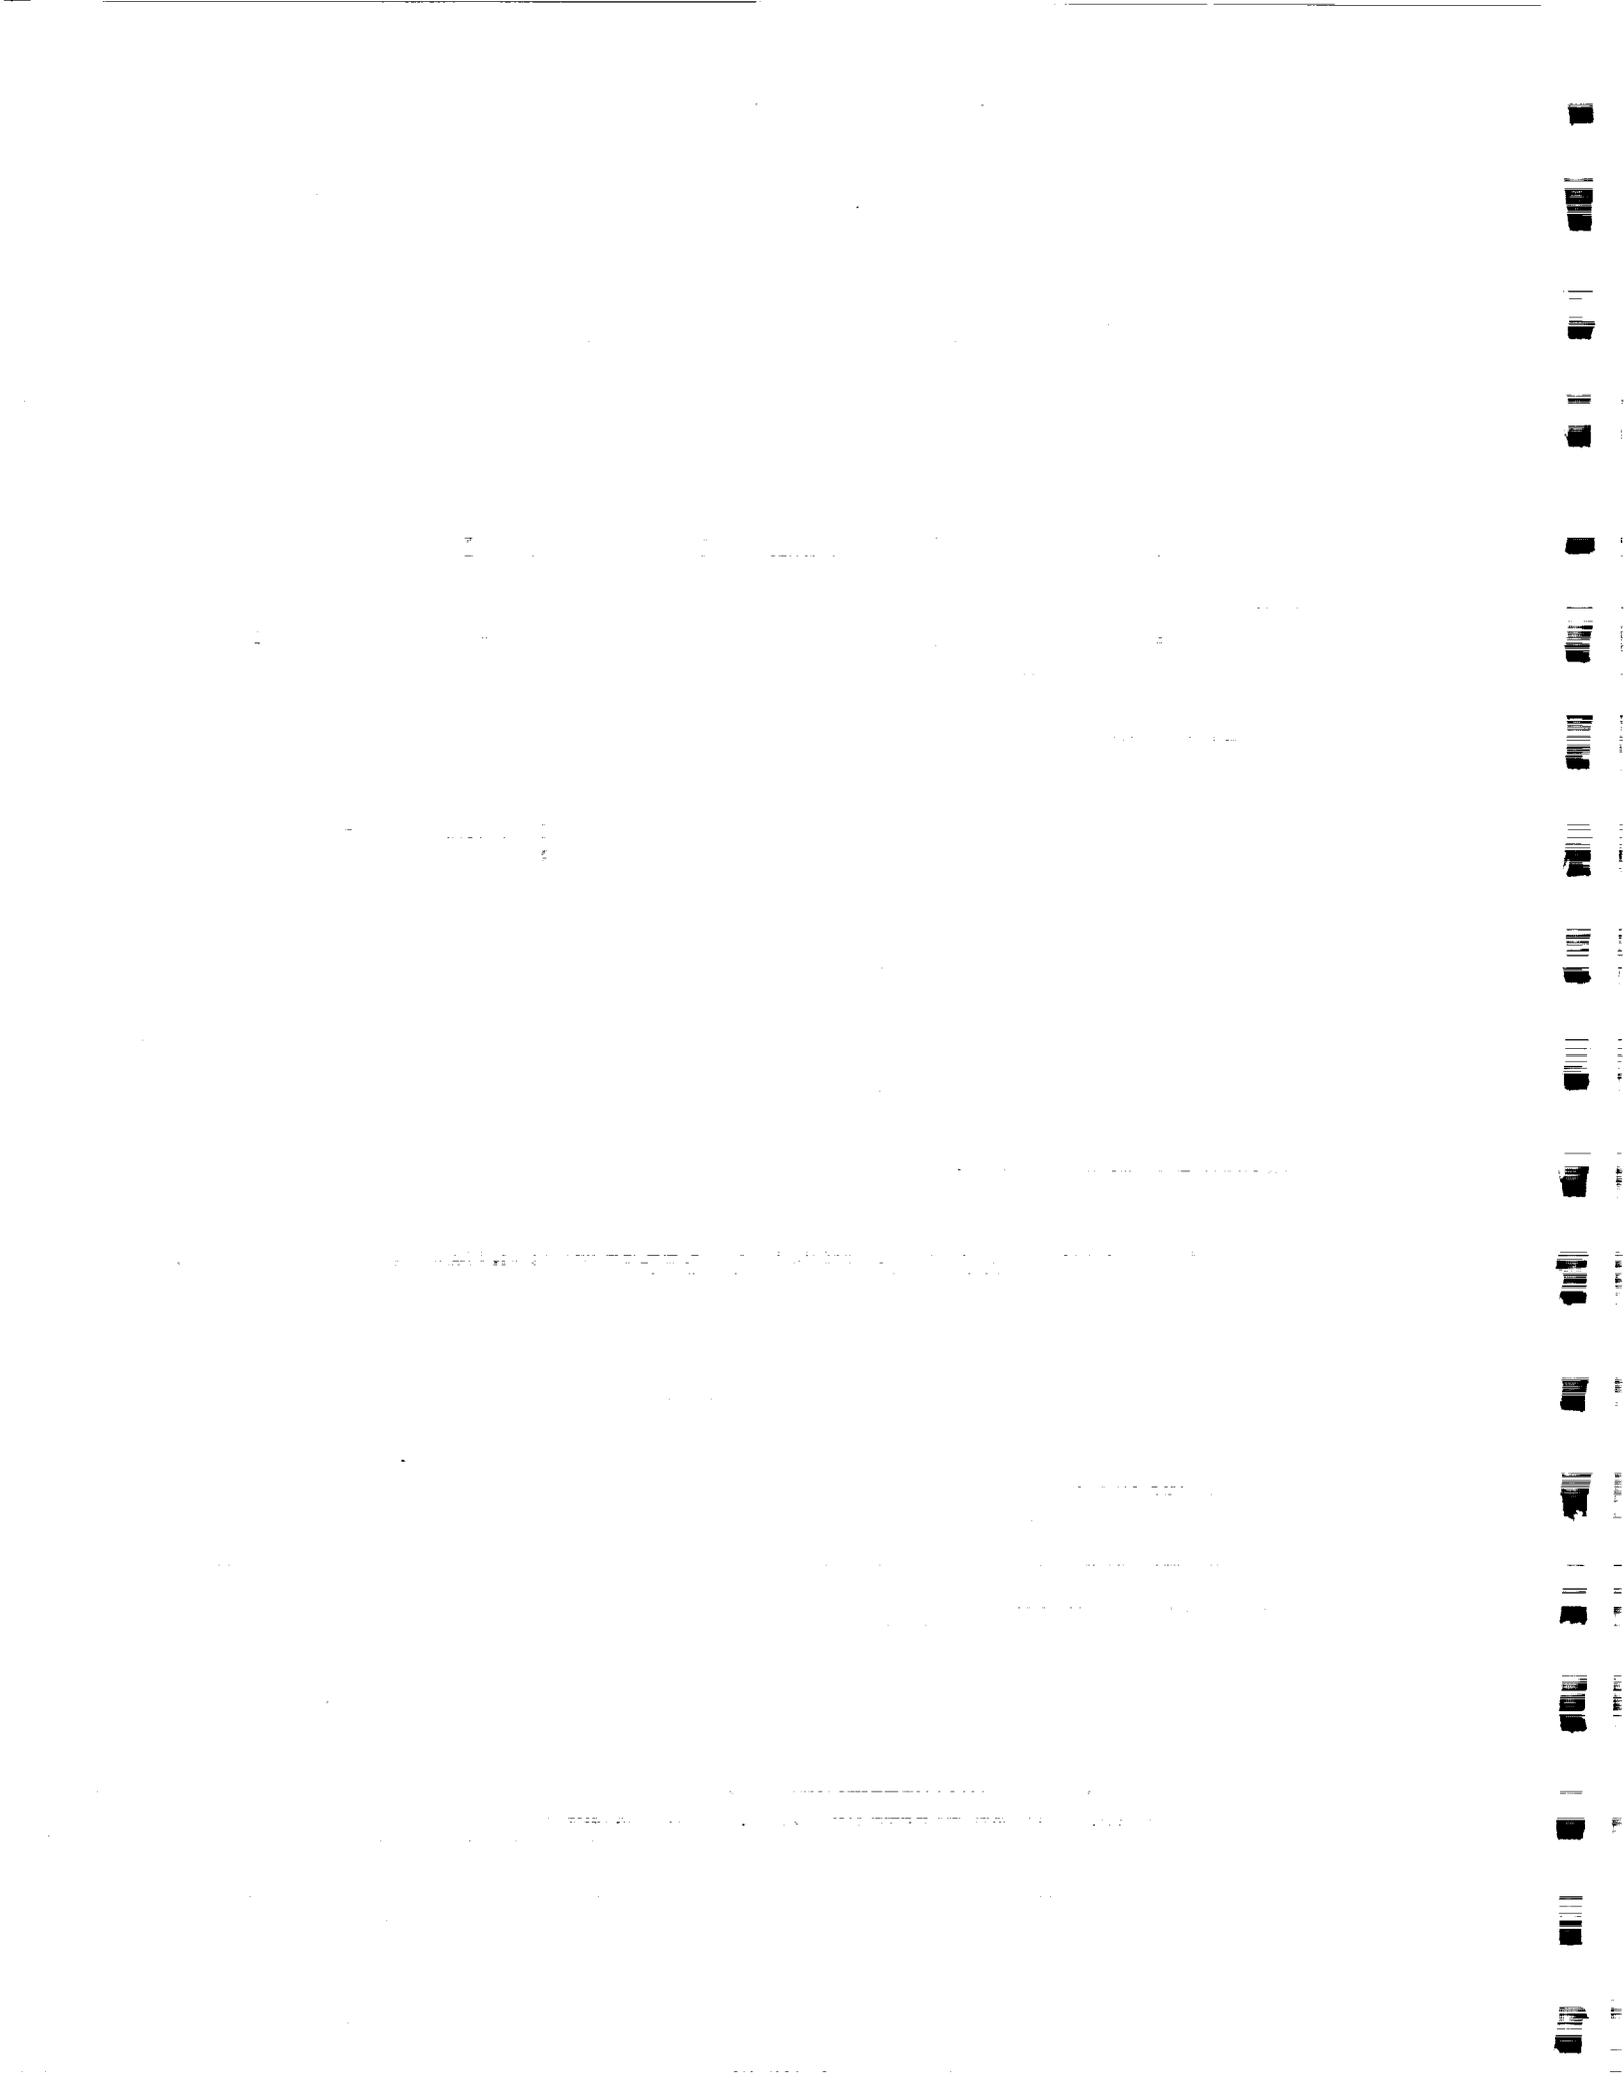

## CONTROL AND DIAGNOSTIC SYSTEM HARDWARE

### CURRENT PROGRAM

- o SIMULATION LAB AND TTBE CONTROL COMPUTERS
- o FLOWMETERS
  - TRIBOELECTRIC
  - ULTRASONIC
  - VORTEX SHEDDING
- o NON-INTRUSIVE SPEED MEASUREMENT
- o GAS LEAK DETECTOR
- o MASS DATA STORAGE
- o ADVANCED PROPELLANT CONTROL VALVES
- o ELECTROMECHANICAL ACTUATOR

### AUGMENTED PROGRAM

- o COMPLETE TEST BED EVALUATION OF FLOWMETER
- o COMPLETE TESTING OF ELECTROMECHANICAL ACTUATOR
- o PROCURE AND DEMONSTRATE HARDWARE FOR MASS DATA STORAGE SYSTEM
- o PROCURE AND DEMONSTRATE COMPUTERS FOR REAL TIME DIAGNOSTIC SYSTEMS

AGENDA

- INTRODUCTION/OVERVIEW/QUAD CHART
- TERMINOLOGY
- PROGRAM DESCRIPTION
- PROGRAMMATIC REVIEW
- CURRENT PROGRESS
- OBSERVATIONS
- SUMMARY CHART

**TRANSPORTATION TECHNOLOGY  
SPACE TRANSPORTATION**

**Space Chemical Engines Technology**

**OBJECTIVES**

**PROGRAMMATIC**

Provide the technology necessary to proceed in the late 1990's with development of moderate-thrust LOX/LH2 expander cycle engines for various space transportation applications.

**TECHNICAL**

**Reliability:** Adequate Margins, Simplicity  
**Oper. Efficiency:** ICHM, Auto Servicing, Min Parts  
**Wide Throttling:** 20:1 and Stable  
**Manufacturing:** Low Cost, High Quality, Inspectable  
**Performance:** Optimum vs. Other Factors  
**Materials:** Environ. Durable (Space&Oper.)  
**Maintainability:** Auto c/o (Space Maintainable)

**SCHEDULE**

1992 - Evaluate (study) modular system concepts  
 1992 - Advanced Expander Test Bed (AETB) DR  
 1996 - AETB Delivered  
 1996 - Complete critical sub-component technology efforts  
 1998 - AETB System characterized  
 1998 - Health Mgt. Sys. & Oper. Eff. Comps. characterized  
 1998 - AETB alternate components characterized  
 1998 - Modular engine system components characterized  
 1999 - Modular engine system characterized  
 1999 - 200 Kibf expander components characterized  
 2001 - 200 Kibf expander system test characterized

**RESOURCES (\$M)**

	CURRENT	3X	STRATEGIC
FY91	4.0	4.0	4.0
FY92	9.0	9.0	9.0
FY93	12.6	14.9	15.0
FY94	13.2	16.7	24.0
FY95	14.0	19.6	31.0
FY96	14.7	20.2	45.8
FY97	15.4	28.0	42.4

**PARTICIPANTS**

**LEWIS RESEARCH CENTER**

Lead Center - Propulsion Studies, Technology Acquisition, Component Validation, Advanced Expander Test Bed (AETB)

**MARSHALL SPACE FLIGHT CENTER**

Participating Center - Propulsion Studies, Technology Acquisition, Component Validation, Test Bed

**APPLICATIONS**

- **EARTH SPACE ORBIT TRANSFER**
- **SPACE EXPLORATION INITIATIVE**

LUNAR TRANSFER VEHICLE  
 LUNAR EXCURSION VEHICLE  
 MARS TRANSFER VEHICLE  
 MARS EXCURSION VEHICLE  
 UNMANNED PLANETARY AND ROBOTIC MISSIONS

- **UPPER STAGES**

ATLAS  
 TITAN

## CRYOGENIC ENGINE OPTIONS

	RL10A-3-3A (Baseline)	RL10A-4	Advanced Space Engine
Vacuum Thrust, lbs	16,500	20,800	7,000 to 50,000
Vacuum Isp, sec	444.4	449.0	> 480
Life (TBO) - # Starts	20	15	> 100
# Hours	1.25	0.8	> 4
Weight, lbs	305	365	TBD
Length, in.	70.1	90	TBD
Thrust/Weight	54	57	TBD
Combustion Pressure, psia	475	578	> 1200
Expansion Ratio	61:1	84:1	> 600:1
Vac. Thrust Throttling Ratio	Not Specified	Not Specified	20:1
Mixture Ratio, O/F	5.0	5.5	6.0
Mixture Ratio Range, O/F	Not Specified	Not Specified	5.0 to 12.0
Basing Man-Rating	Ground No	Ground No	Space Yes
Hardware Changes from RL10A-3-3A	None	Modified Turbine Strengthened Chamber and Injector Improved Gear Train Modified LOX Pump Improved Injector 20" Nozzle Extension & Mechanism Fuel Pump Tolerance Improved Solenoids	Clean Sheet Design
Development Status	Operational	Flight Qualified	Technology Dev.

# SPACE CHEMICAL ENGINES TECHNOLOGY

## PROGRAM DESCRIPTION

### CONCEPT

- CONDUCT A FOCUSED TECHNOLOGY PROGRAM IN SPACE ENGINES:
  - AS RAPIDLY AS RESOURCES PERMIT
  - AS RAPIDLY AS PRIORITIES DICTATE
- CONDUCT THE PROGRAM WITH THE WIDEST POSSIBLE PARTICIPATION
  - INDUSTRY
  - ACADEMIA
  - GOVERNMENT
- INVOLVE THE USERS AS SOON AS PRACTICABLE
  - REQUIREMENTS
  - TECHNOLOGY TRANSFER

## PROGRAM DESCRIPTION

### PURPOSE

- PROVIDE THE TECHNOLOGY NECESSARY TO CONFIDENTLY PROCEED, IN THE LATE 1990'S WITH THE DEVELOPMENT OF MODERATE THRUST (7.5 TO 200 KLBF) HIGH-PERFORMANCE, LIQUID OXYGEN/LIQUID HYDROGEN EXPANDER CYCLE ENGINES FOR VARIOUS SPACE TRANSPORTATION APPLICATIONS.

## PROGRAM DESCRIPTION

### MAJOR OBJECTIVES

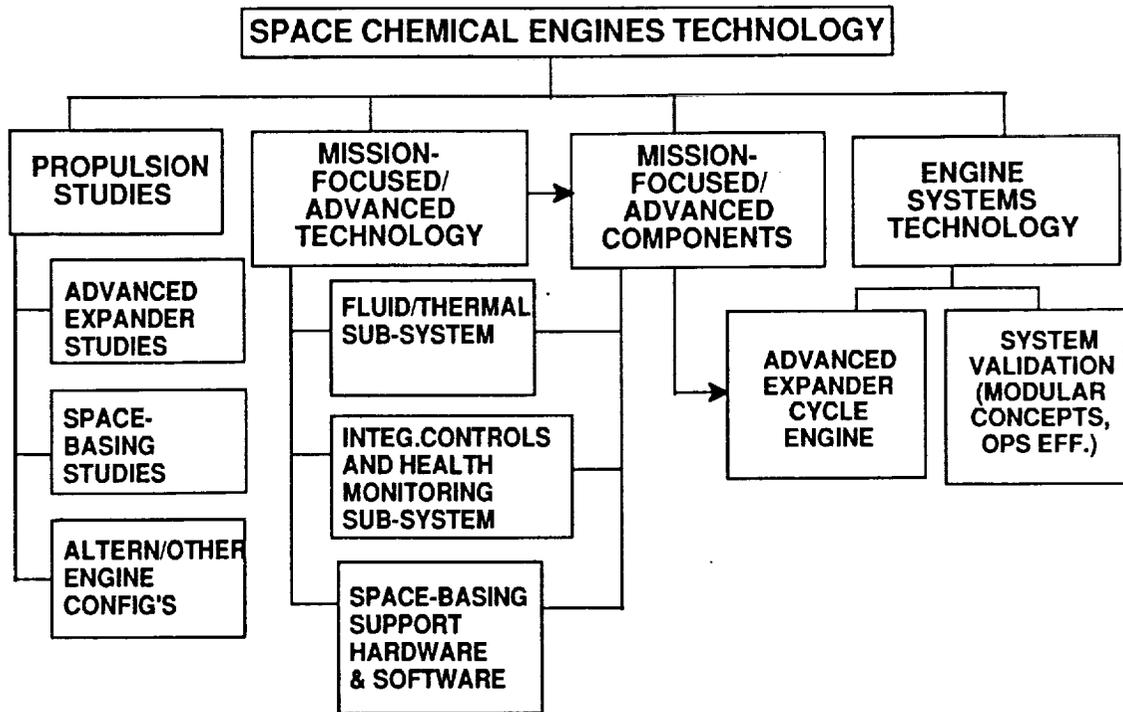

- IDENTIFY, ASSESS TECHNOLOGY REQUIREMENTS
- IDENTIFY, CREATE, AND/OR VALIDATE:
  - DESIGN & ANALYSIS METHODOLOGIES/SOFTWARE
  - MATERIALS WITH REQUIRED/DESIRABLE PROPERTIES
  - RELIABLE, COST-EFFECTIVE MANUFACTURING PROCESSES
- DEVELOP AND VALIDATE ENGINE AND SUPPORT EQUIPMENT SUB-COMPONENT, COMPONENT, AND SYSTEM TECHNOLOGIES FOCUSED ON (IN PRIORITY ORDER):
  - RELIABILITY
  - OPERATIONAL EFFICIENCY
  - WIDE-RANGE THROTTLING
  - LOW-COST MANUFACTURING
  - EFFICIENT PERFORMANCE
  - SPACE-ENVIRONMENT DURABILITY
  - REUSABILITY/OPERATION-ENVIRONMENT DURABILITY
  - IN-SPACE MAINTAINABILITY

## PROGRAM DESCRIPTION

### APPROACH

- PROPULSION STUDIES TO DEFINE PROPULSION TECHNOLOGY REQUIREMENTS
- TECHNOLOGY EFFORTS ADDRESSING THE TECHNOLOGY NEEDS
- DEVELOPMENT OF ANALYTICAL TOOLS, TECHNOLOGIES, DESIGNS
- VALIDATION IN AN ENGINE SYSTEM ENVIRONMENT

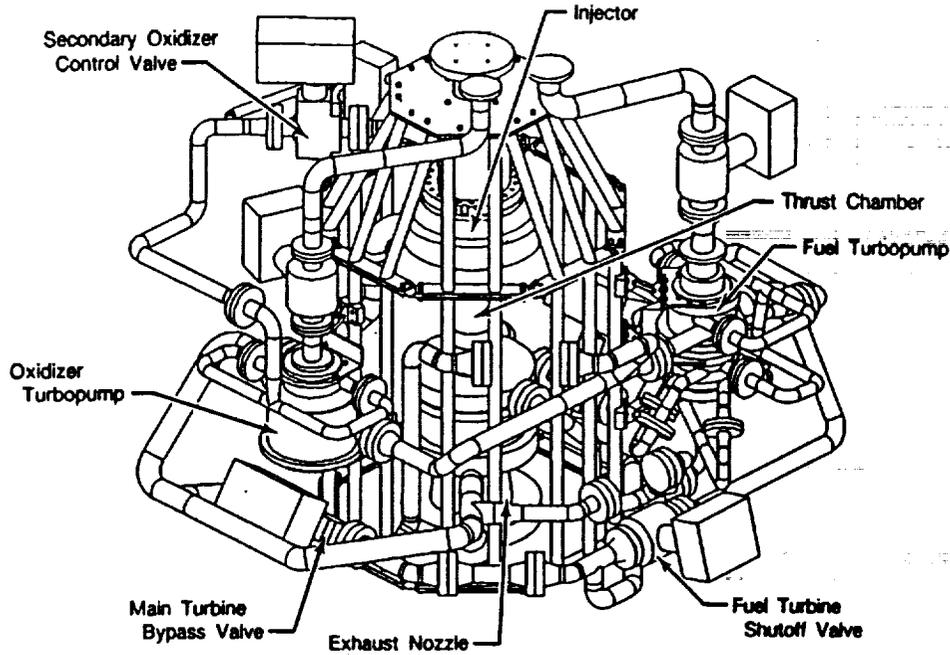

# PROGRAM DESCRIPTION

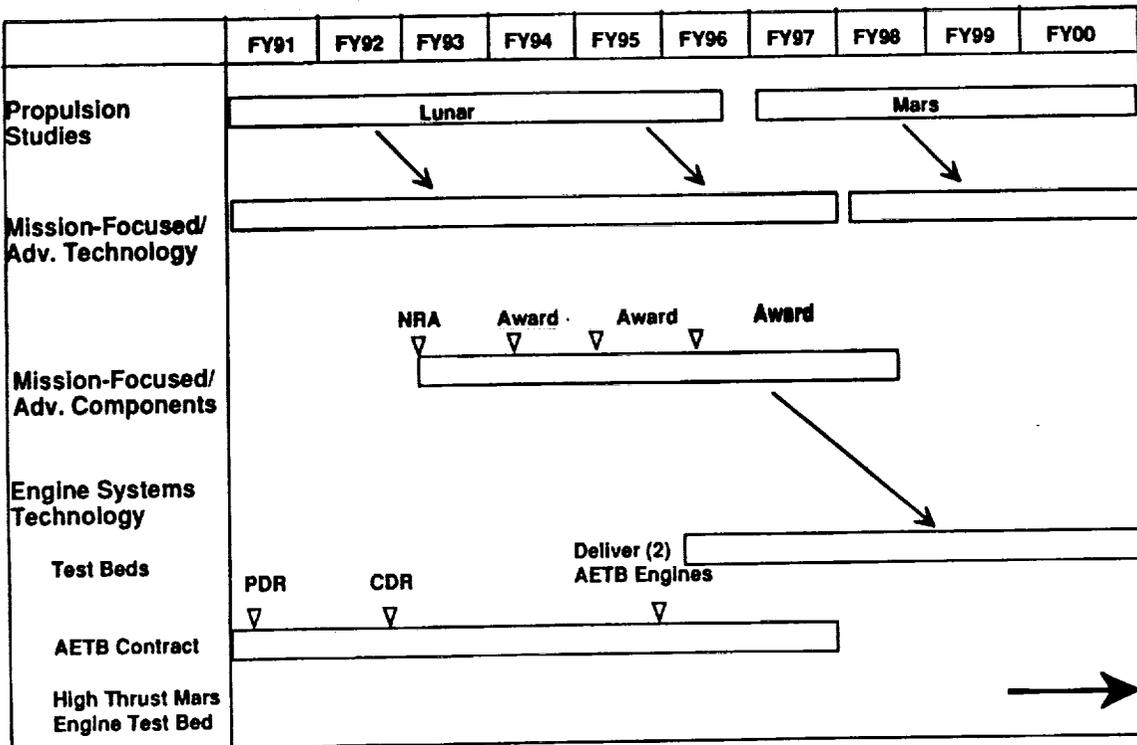

## ADVANCED EXPANDER TEST BED (AETB) CHARACTERISTICS

- **PROPELLANTS:** HYDROGEN/OXYGEN
- **CYCLE:** SPLIT EXPANDER
- **THRUST:** 25K (DESIGN)  
20K (NORMAL OPN)
- **CHAMBER PRESSURE:** 1500 PSI (DESIGN)  
1200 PSI (NORMAL OPN)
- **THROTTLING:** 125% TO 5% CONTINUOUS
- **IDLE MODES:** PUMPED (LOW NPSP)  
TANKHEAD (NON-ROTATING)
- **MIXTURE RATIO (O/F):** 6.0 ± 1.0  
12.0
- **LIFE** 100:STARTS/5 HOURS

# PROGRAMMATIC REVIEW

## STRATEGIC PROGRAM

- PROGRAM STARTED IN FY89
  - PLANNING UNDERWAY IN FY88
  - PROGRAM CONCEPT FINALIZED
  - AETB PROCUREMENT STARTED
  - STRATEGIC PROGRAM RESOURCE REQUIREMENTS ESTABLISHED
- FY90-92 LEAN YEARS
  - REPLAN, "HOLD-ON" STRATEGY
  - AFFIRM EMPHASIS ON SYSTEMS TECHNOLOGY
- FY90-92 IMPACTS
  - MINIMIZED PARTICIPATION (OTV CONTRACTS, INDUSTRY, UNIVERSITIES)
  - OTV TASK ORDER CONTRACTS END, NRA'S DO NOT START: STRAINS INDUSTRY PARTICIPATION
  - IRREVERSIBLE SCHEDULE IMPACTS (AETB, NRA'S)

<u>NEEDS</u>	<u>STRATEGIC</u>	<u>CURRENT</u>
HIGH RELIABILITY	<ul style="list-style-type: none"><li>• 1996 AETB SYSTEMS TESTS</li><li>• ALTERNATIVE CONFIG. SYSTEMS</li></ul>	<ul style="list-style-type: none"><li>• 1997 AETB SYSTEMS TESTS</li><li>• ALTERNATIVE CONFIG. COMPONENTS</li></ul>

## PROGRAMMATIC REVIEW

### STRATEGIC PROGRAM

- **PROVIDES TECHNOLOGY TO MEET USER NEEDS**
  - SYSTEMS LEVEL TECHNOLOGY (AETB, MODULAR SYSTEMS, OPERATIONAL EFFICIENCY)
  - ADVANCED/ALTERNATIVE COMPONENTS
  - SYSTEMS LEVEL VALIDATION
- **ADEQUATELY MEET MOST USER SCHEDULAR NEEDS**
  - COMMERCIAL NEEDS MARGINALLY MET
  - HIGH ENERGY UPPER STAGES
  - EXPLORATION MISSIONS
- **PROMOTES TECHNOLOGY TRANSFER**
  - WIDE NUMBER OF PARTICIPANTS (NRA) (INDUSTRY, ACADEMIA, GOVERNMENT)
  - PARTICIPATION IN PARALLEL
  - EXTENSIVE LEVELS OF PARTICIPATION (ALL ON SYSTEM MODEL LEVEL, ALL WITH COMPONENTS)
  - PERMITS SUBSTANTIAL, MEANINGFUL LEVEL OF PARTICIPATION BY MSFC
  - ENABLES PRODUCTIVE SYNERGISM WITH BASE R&T AND NON-SCET PROGRAMS

### CURRENT PROGRAM

- **MARGINALLY MEETS USER TECHNICAL NEEDS**
  - AETB SYSTEMS TECHNOLOGY (1989)
  - ONE OR TWO ADVANCED COMPONENTS (TURBOPUMPS)
  - LIMITED FOCUSED TECHNOLOGY (COMBUSTION DEVICES, HEALTH MONITORING)
  - STUDIES (MAINTAINABILITY)
- **MARGINALLY MEETS SOME USER SCHEDULAR NEEDS**
  - COMMERCIAL NEEDS ARE IMMEDIATE (COST AVOIDANCE, EARLY MARKET ENTRY)
  - HIGH ENERGY UPPER STAGES NEEDED NEAR TERM (DOD, UNMANNED MISSIONS)
  - EXPLORATION MISSIONS MOST COMPLICATED, REQUIRE ADEQUATE TECHNOLOGY LEAD TIMES (SYNTHESIS GROUP IOC'S 2003, 2004, 2005)
- **INHIBITS TECHNOLOGY TRANSFER ("HANDS ON")**
  - VERY LIMITED NUMBER OF PARTICIPANTS (NRA) (ONE OR TWO COMPONENTS)
  - PARTICIPATION LIKELY IN SERIES (ONE OR TWO AT A TIME)
  - LIMITED LEVEL OF PARTICIPATION (STUDIES, FOCUSED TECHNOLOGY)
  - DIFFICULT INTERNASA CENTER TECHNICAL PLANNING (LERC/MSFC)

**PROGRAMMATIC REVIEW**

**SPACE PROPULSION TECHNOLOGY**

**BASE R&T/FOCUSED R&T**

- **SPACE CHEMICAL ENGINE TECHNOLOGY REQUIRES A FLOW OF TECHNOLOGIES THROUGH LEVELS OF TECHNICAL MATURITY**
- **TECHNOLOGIES PASS FROM THE BASE PROGRAM TO THE FOCUSED PROGRAM WHEN THEY REACH ACKNOWLEDGED VIABILITY OF AN ACCEPTABLE LEVEL OF MATURITY**
- **BASE AND FOCUSED PROGRAMS ARE STRONGLY LINKED, BUT SEPARATE**

**PROGRAMMATIC REVIEW**

**SPACE PROPULSION TECHNOLOGY**

**BASE R&T**

- **BROAD UTILITY FOR A WIDE RANGE OF APPLICATIONS**
- **FUNDAMENTAL KNOWLEDGE THAT COULD BECOME PART OF A FOCUSED PROGRAM**
  - HIGH RISK/HIGH PAYOFF**
- **SPECIFICS:**
  - NETWORK OF TECHNOLOGY INFORMATION**
  - ENGINEERING AND SCIENTIFIC ANALYSIS AND DESIGN TOOLS**
  - INSTRUMENTATION/DIAGNOSTICS**
  - MATERIALS**
  - PROPELLANTS**
  - PROCESSES**
  - SUBCOMPONENTS TO COMPONENTS TO SYSTEMS**

**PROGRAMMATIC REVIEW**  
**SPACE PROPULSION TECHNOLOGY**

**FOCUSED R&T**

- **TECHNOLOGIES FOR SPECIFIC MISSION/PROGRAM/APPLICATION**
- **DEFINED DELIVERABLES, SCHEDULE, RESOURCE**
- **PRODUCT: TECHNOLOGIES TO SATISFY THE USER REQUIREMENTS**
- **MULTIDISCIPLINARY CONTENT, PROGRESSION TO A SPECIFIC TECHNOLOGY READINESS LEVEL**
- **EXTREMELY VISIBLE**
- **SPECIFICS:**
  - STUDIES AND ANALYSES TO GUIDE PROGRAM**
  - METHODOLOGIES FOR THE DESIGN OF PROPULSION SYSTEMS**
  - COMPONENT AND SYSTEM MODELING**
  - VALIDATED TECHNOLOGIES THAT MEET USER REQUIREMENTS**
  - SYSTEM FOCUS**
  - FLIGHT EXPERIMENTATION**

**ENGINE SYSTEMS**

- **TESTBED CONCEPT IS KEY TO SPACE CHEMICAL ENGINES TECHNOLOGY**
- **TESTBED VALIDATION RECOGNIZED FOCUSED TECHNOLOGY NECESSITY (ETO)**
- **TESTBED EMULATES HIGHLY SUCCESSFUL AEROPROPULSION PROGRAM**
  - **ATEGG (ADVANCED TURBINE ENGINE GAS GENERATOR (CORE))**
  - **JTDE (JOINT TECHNOLOGY DEMONSTRATOR ENGINE)**
  - **IHPTET (INTEGRATED HIGH PERFORMANCE TURBINE ENGINE TECHNOLOGY)**
- **U.S. AEROPROPULSION LEADS THE WORLD**
- **AETB HAS WIDE APPLICABILITY**

## **PROGRAMMATIC REVIEW**

### **LERC/MSFC TECHNICAL PLANNING**

- **WE HAVE 2 DIFFERENT PERSPECTIVES**
  - **TECHNOLOGISTS (LERC)**
  - **DEVELOPERS (MSFC)**
- **WE COME FROM 2 DIFFERENT CULTURES**
  - **"BOTTOMS UP" (LERC)**
  - **"TOP DOWN" (MSFC)**
- **WE HAVE WORKED TO DIFFERENT END PRODUCTS**
  - **TECHNOLOGY MATURITY LEVEL, MULTIPLE USERS (LERC)**
  - **SPECIFIC HARDWARE DEMONSTRATION, SPECIFIC USE (MSFC)**
- **SPACE CHEMICAL ENGINES FOCUSED TECHNOLOGY PROGRAM**
  - **TECHNOLOGY PROGRAM**
  - **BLENDS PERSPECTIVES, CULTURES**
  - **BEST COMBINATION**

### **CURRENT PROGRESS**

- **IDENTIFIED POTENTIAL CUSTOMERS**
- **IDENTIFIED CUSTOMER NEEDS**
- **IDENTIFIED MEANS OF MEETING NEEDS**
- **IDENTIFIED MOST IMPORTANT TECHNOLOGY PROGRAM ELEMENTS**
- **PLANNED AND COSTED PROGRAM ELEMENTS**
- **FINALIZING NEAR-TERM DETAILS, IMPLEMENTAION**

## OBSERVATIONS

- **SPACE CHEMICAL ENGINES TECHNOLOGY PROJECT IN PLACE**
- **FY91 AND FY92 LEAN YEARS WITH IRREVERSIBLE EFFECTS**
- **PROGRAMS HAVE BEEN PLANNED FOR STRATEGIC/CURRENT PROGRAMS**
- **STRATEGIC PROGRAM HEALTHY (CONTENT, PACE, PARTICIPATION)**
- **CURRENT PROGRAM MARGINAL**
- **LERC AND MSFC DETAILED TECHNICAL PLANNING IN PROGRESS**
- **FY93 FUNDING DETERMINES MAJOR PROGRAM DIRECTION**

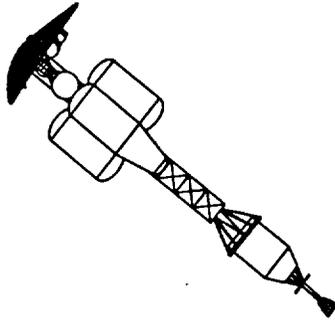

**Integrated Technology Plan  
for the  
Civil Space Program**

512-31  
- 157479  
**N93-71885**

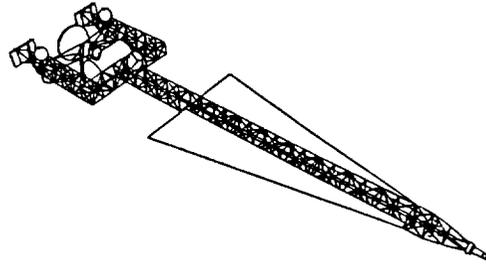

**FOCUSED TECHNOLOGY: NUCLEAR PROPULSION**

P-40

**Nuclear Thermal Propulsion**

**Nuclear Electric Propulsion**

**JUNE 27th, 1991  
Washington, D.C.**

**OVERVIEW**

**Thomas J. Miller**  
Head, Nuclear Propulsion Office  
NASA Lewis Research Center

# FOCUSED TECHNOLOGY: NUCLEAR PROPULSION SUMMARY

• **IMPACT:**

- Nuclear Propulsion Enables and/or Enhances Space Exploration Missions

	<u>Nuclear Electric Propulsion (NEP)</u>	<u>Nuclear Thermal Propulsion (NTP)</u>
Enables:	Robotic Science Missions	Mars Piloted
Enhances:	Lunar & Mars Cargo, & Mars Piloted Space Exploration	Lunar & Mars Cargo, Lunar Piloted & Robotic Science Space Exploration

• **USER COORDINATION:**

- Exploration Studies Identify Nuclear Propulsion as a Key Technology
- OAET/RZ - Provide Performance Predictions for NASA Studies
- OSSA Study on NEP for Robotic Science Missions
- DOE, DoD & NASA Included on Steering Committee (also Astronaut Office)

• **TECHNICAL REVIEWS:**

- Interagency Design Review Teams will Periodically Review Technical Progress

• **OVERALL TECHNICAL AND PROGRAMMATIC STATUS:**

- High Priority Technology Areas Identified (some efforts initiated)
- Budget Deliberations Continue
- Single Multi Agency Plan Defined for FY92 Implementation

• **MAJOR TECHNICAL/PROGRAMMATIC ISSUES:**

- Agency/Department Roles
- Funding to Initiate Technical Efforts
- Projected Budget Does Not Support Schedules

## Nuclear Thermal Propulsion

### PERFORMANCE OBJECTIVES

PARAMETER	STATE-OF-THE ART	OBJECTIVE
THRUST (Lbf)	75K (NERVA) 250K (PHOEBUS)	75K-125K/Engine <i>(May cluster multiple engines)</i>
SPECIFIC IMPULSE (sec)	625	≥ 925
CHAMBER PRESSURE	450	500 - 1000
EXHAUST TEMP. (°K)	2300-2500	≥ 2,700 <i>(w/ Approp. Safety &amp; Reliability Margins)</i>
POWER (MW)	1100 (NERVA) 4,200 (PHOEBUS)	≥ 1,600 1.0
LIFETIME (Hrs) Single Burn	1.0	4.5 <i>(2x Mission req.)</i>
Cumulative	1.5	5
REUSABILITY (No. Missions)	1	

#### CHALLENGES

- High Temperature Fuel and Materials
- Hot Hydrogen Environment
- Test Facilities
- Safety
- Environmental Impact Compliance
- Concept Development

#### MISSION BENEFITS

- Short Transit Time Missions are Enabled
- Reduced IMLEO (~ 1/2 of Chemical)
- Crew Safety Enhanced
- Wider Launch Windows
- More Mars Opportunities
- High Thrust Available
- Aerobrake Not Required

# Nuclear Electric Propulsion

## PERFORMANCE OBJECTIVES

PARAMETER	STATE-OF-THE ART		OBJECTIVE	
<b>POWER</b>	SP-100			
POWER LEVEL (MWe)	0.1		≥10.0	
SPECIFIC MASS (Kg/KWe)	30		≤ 10	
<b>PROPULSION</b>	ION	MPD	ION	MPD
SPECIFIC IMPULSE (sec)	2000-9000	1000-5000	2000-9000	1000-7000
EFFICIENCY	0.7-0.8	0.3	0.7-0.8	>0.5
POWER LEVEL (MWe)	0.01-0.03	0.01-0.5	1 - 2	1 - 5
LIFETIME (Hrs)	10,000	?	10,000	≥ 2000
<b>PMAD</b>				
EFFICIENCY	0.90		0.95	
SPECIFIC MASS (Kg/KWe)	4		≤ 2.5	
REJECTION TEMP. (*K)	400		600	

### CHALLENGES

- Long Operational Lifetime
- High Temperature Reactors, Turbines, Radiators
- High Fuel Burn-up Reactor Fuels, Designs
- Efficient, High Temperature Power Conditioning
- High Efficiency, Long Life Thrusters
- Safety
- Environmental Impact Compliance
- Concept Development

### MISSION BENEFITS

- Low Resupply Mass
- Availability of Onboard Power
- Reduced IMLEO Sensitivity w/Mission Opportunity
- Broad Launch Windows
- Commonality with Surface Nuclear Power
- Aerobrake Not Required

## TRANSPORTATION TECHNOLOGY SPACE TRANSPORTATION

### Nuclear Thermal Propulsion

#### OBJECTIVES

##### Programmatic

Develop propulsion technologies capable of fulfilling requirements, such as performance, long life, and multiple starts, for future piloted and cargo missions to Mars and the Moon, and robotic precursor missions.

##### Technical

Fuel Temperature	2700- 3100K (1995)
Fuel Lifetime	4.5 hrs (cyclic)
Man-Rated	Autonomous Robotic Operation
Ground Testing	Full System (TRL-6) by 2006

#### SCHEDULE

1992	Lab-Scale Demonstration of 2700K reactor fuel
1994	Complete conceptual designs of selected concepts for piloted Mars mission
1996	Nuclear Furnace Facility Complete
1998	Select NTR Concept(s) for Systems Testing
1999	Systems Facility Construction Complete
2002	First NTR Reactor Test Complete
2006	Full System Ground Testing Complete Verifying Technology Readiness Level 6 (TRL-6) for NTR

#### RESOURCES\*

	NASA**	DOE*
1991	\$00.4M	
1992	\$05.0M	\$014.0M
1993	\$13.0M	\$055.0M
1994	\$22.0M	\$095.0M
1995	\$39.0M	\$145.0M
1996	\$50.3M	\$190.0M
1997	\$83.0M	\$210.0M

#### PARTICIPANTS

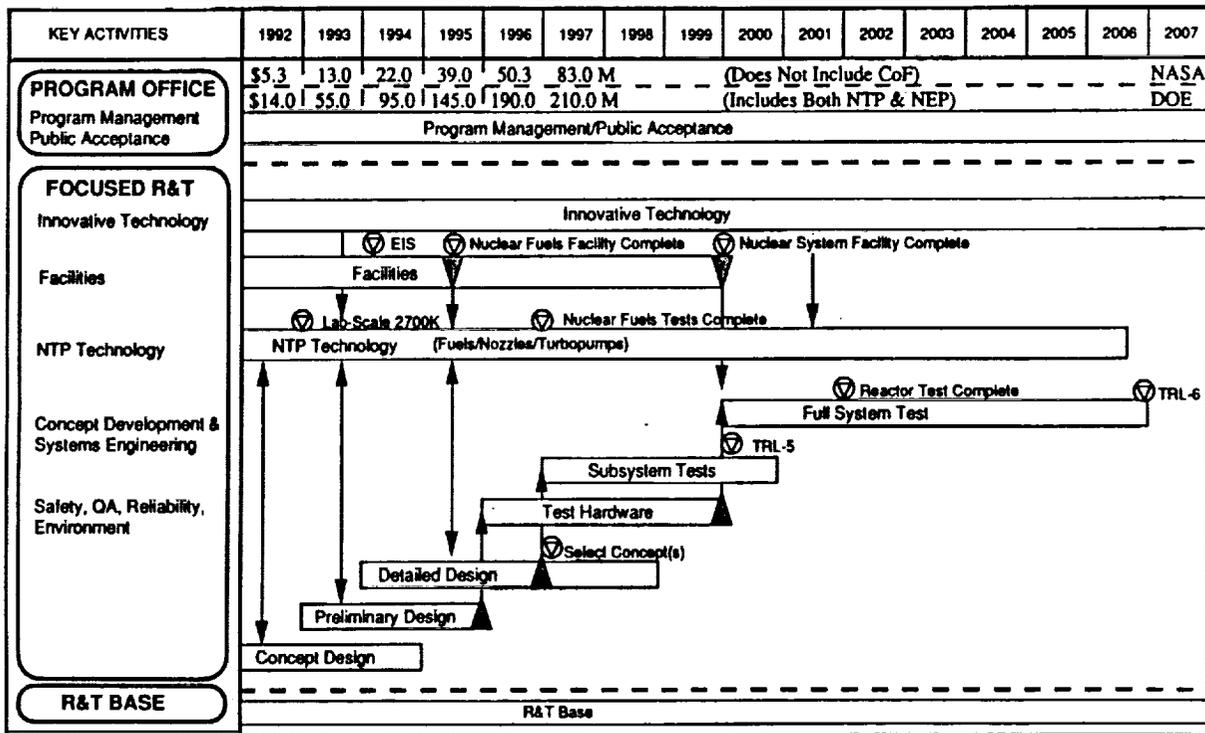

Lewis Research Center Lead Center	DOE Laboratories INEL, LANL, SNL, ORNL, ANL, BNL...
Marshall Space Flight Center Participating Center	
Johnson Space Center Supporting Center	

\* DOE current estimate for both NTP & NEP

\*\* NASA dollars do not include CoF

## Nuclear Electric Propulsion

### OBJECTIVES

#### Programmatic

Develop propulsion technologies capable of fulfilling requirements, such as performance, long life, and multiple starts, for future piloted and cargo missions to Mars and the Moon, and robotic precursor missions.

#### Technical

Power	> 10MWe
Specific Mass	< 10kg/kwe by 2006
	< 5 kg/kwe by TBD
Lifetime	3-10 years

### SCHEDULE

- 1993 Complete 500 kW electric propulsion testing facility and designs for high power (MW class) electric thrusters
- 1994 Complete candidate systems study for reactor power source, power conversion, power processing, thruster and control concepts
- 1997 Complete breadboard demo of megawatt class electric thruster technology
- 2000 Verify 1000 hours of life for 500 kW electric propulsion system
- 2005 Complete ground tests to verify megawatt class power/propulsion system
- 2006 Verify TRL-6 through flight test of 500 kW subscale NEP vehicle

### RESOURCES

	NASA**	DOE*
1991	-

- SUPPLEMENTAL INFORMATION

NUCLEAR PROPULSION PROJECT

**SOLID CORE NTR CONCEPT  
(DUAL TURBOPUMPS, EXPANDER CYCLE)**

**NTR:** A SPACE PROPULSION DEVICE WHICH USES HEAT FROM A NUCLEAR FISSION REACTOR TO RAISE THE TEMPERATURE OF A PROPELLANT (LH<sub>2</sub>) AND THEN EXPANDS IT THROUGH A NOZZLE TO PROVIDE THRUST.

SP/ ? EXPLORATION INITIATIVE OFFICE

**WHY IS NTR PROPULSION NECESSARY?  
-SYNTHESIS GROUP OBSERVATIONS-**

- **SAFETY TO CREW GREATLY ENHANCED**
  - SHORTER TRIP TIMES REDUCES RADIATION EXPOSURES AND PSYCHOLOGICAL STRESSES
  - FEWER MOVING PARTS AND ELEMENTS INCREASE RELIABILITY, REDUCE RISK
  - WIDER LAUNCH WINDOWS LEAVING EARTH AND FOR MARS RETURN
  - MORE OPPORTUNITIES TO GO TO MARS, ALL TWO YEAR INTERVALS FEASIBLE
  - LESS ASSEMBLY OF MARS SPACECRAFT NEEDED IN EARTH ORBIT
- **REDUCED MISSION COSTS**
  - MASS IN LOW EARTH ORBIT GREATLY REDUCED (ONE-THIRD TO ONE-HALF) WITH A CORRESPONDING REDUCTION IN MISSION COSTS
  - FLEXIBILITY IN SCHEDULES

NUCLEAR PROPULSION PROJECT

NUCLEAR THERMAL ROCKET MISSION APPLICATIONS

- NTR TECHNOLOGY HAS A WIDE RANGE OF MISSION APPLICATIONS: PROBES, OTVs, CARGO AND PILOTED VEHICLES
- "1st GENERATION" NTR FLIGHT ENGINE CAN SATISFY ENTIRE SPECTRUM OF SEI MISSIONS - ADVANCED DESIGNS DESIRABLE BUT NOT REQUIRED FOR CURRENT MISSIONS OF INTEREST

LUNAR TRANSFER VEHICLES

MARS TRANSFER VEHICLES

● CARGO

● CARGO

- SEP (MULTI - 100kW<sub>e</sub> - MW<sub>e</sub> CLASS)
- NEP (MW<sub>e</sub> CLASS,  $\alpha \geq 15$  kg/kW<sub>e</sub>)
- SC/NTR ( $\leq 75$  kbf "NERVA" CLASS)
- "DUAL MODE" SC/NTR ( $\leq 75$  kbf & MULTI - 10 kW<sub>e</sub> CLASS)

- SEP/NEP ( $\geq 5$  MW<sub>e</sub>,  $\alpha \leq 15$  kg/kW<sub>e</sub>)
- SC/NTR ( $\geq 75$  kbf)
- "DUAL MODE" SC/NTR (~ 75 kbf & 10's kW<sub>e</sub>-MW<sub>e</sub>)

● PILOTED

● PILOTED

- SC/NTR ( $\leq 75$  kbf)
- "DUAL MODE" SC/NTR ( $\leq 75$  kbf & MULTI - 10 kW<sub>e</sub> CLASS)

- NEP/SEP ( $\geq 10$  MW<sub>e</sub>,  $\alpha \leq 10$  kg/kW<sub>e</sub>)
- SC/NTR ( $\geq 75$  kbf)
- "DUAL MODE" SC/NTR (~ 75 kbf - 250 kbf & ~ 10's kW<sub>e</sub>-MW<sub>e</sub> FOR EP)
- COMBINED HIGH & LOW THRUST CONCEPTS

● "QUICK PILOTED TRIPS" ( $\leq 1$  YEAR)

- SC/NTR (SPLIT/SPRINT MISSIONS)
- "DUAL MODE" SC/NTR + MMW<sub>e</sub> EP
- GC/NTR
- "SUPER" NEP (10's MW<sub>e</sub>,  $\alpha \leq 5$  kg/kW<sub>e</sub>)

NUCLEAR PROPULSION PROJECT

RATIONALE FOR NASA DEVELOPMENT OF NTR PROPULSION

• THE ROVER/NERVA PROGRAMS ESTABLISHED A SIGNIFICANT DATA BASE ON SC/NTRs

- 1.4 B\$ INVESTMENT IN 1960-1970 TIME FRAME EQUIVALENT TO >9.5 B\$ TODAY

• THE SC/NTR CONCEPT HAS BEEN SUCCESSFULLY GROUND TESTED (TO TRL 6) AT THE POWER AND THRUST LEVELS, AND HYDROGEN EXHAUST TEMPERATURES/EQUIVALENT SPECIFIC IMPULSES SUFFICIENT TO PERFORM A 434 DAY 2016 MARS MISSION IN "REUSE" MODE I.e., WITH PROPULSIVE RETURN OF ENTIRE VEHICLE TO LEO

- A STATE-OF-THE-ART GRAPHITE CORE NTR (AT 1000 psi,  $\epsilon = 500:1$ ) OPERATING AT 2360 K/850 s HAS IMLEO = 725 t, 102 t LIGHTER THAN REFERENCE CHEM/AB VEHICLE WITH ECCV RETURN TO EARTH

• NTR CAN PROVIDE REDUCTIONS IN TRANSIT TIMES ACROSS THE 15 YEAR CYCLE. MAGNITUDE WILL DEPEND ON TRAJECTORY TYPE, PARTICULAR OPPORTUNITY, MISSION MODE, AND IN-PLACE INFRASTRUCTURE

- WITH MODEST TECHNOLOGY ADVANCES BEYOND 72 VINTAGE NERVA (COMPOSITE FUEL DELIVERING 925 s), A 1 YEAR ROUND-TRIP MARS MISSION (2016) IS POSSIBLE, IN SPLIT/SPRINT MODE, WITH ACCEPTABLE TOTAL IMLEO (<1000 t) FOR BOTH PILOTED AND CARGO VEHICLES

• NTR TECHNOLOGY OFFERS POTENTIAL FOR SIGNIFICANT EVOLUTIONARY GROWTH

- SOLID CORE: GRAPHITE (2500 K) → COMPOSITE (2700 K) → CARBIDES (>3000 K)

- SOLID CORE → LIQUID CORE → GAS CORE

NUCLEAR PROPULSION PROJECT

PERFORMANCE CHARACTERISTICS  
OF  
NTR SYSTEMS

<u>PARAMETER</u>	<u>GOODNESS</u>	<u>IMPORTANCE</u>
SPECIFIC IMPULSE (SECONDS)	MODERATE → HIGH	IMPROVED FUEL EFFICIENCY
SPECIFIC MASS (RECIPROCAL OF SPECIFIC POWER, kg/kW))	LOW	ENGINE HAS GOOD POWER PRODUCING CAPABILITY
ENGINE THRUST/WEIGHT	MODERATE → HIGH	OPERATIONAL FLEXIBILITY

SPACE EXPLORATION INITIATIVE OFFICE

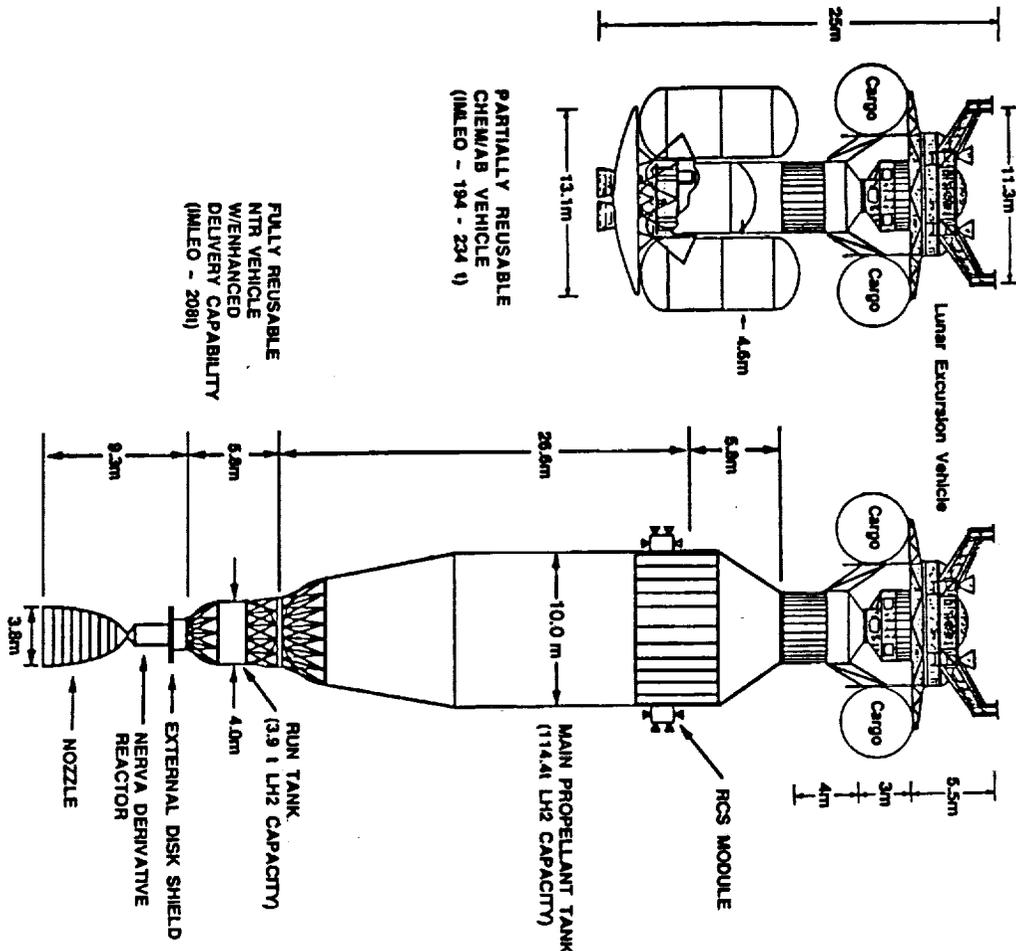

LUNAR NTR APPLICATIONS

SPACE EXPLORATION INITIATIVE OFFICE

**WHY NTR FOR LUNAR MISSIONS?**

- **Potential Performance Benefits**
  - High Isp and T/W<sub>0</sub> allows both piloted and cargo missions
  - Enables single stage, fully reusable lunar transfer vehicle
  - Enables more demanding mission profiles (e.g., "courier" and polar orbit missions with significant plane change)
  - Reduces IMLEO/fewer Earth to orbit launches
- **Early Operations Experience**
  - NTR vehicle assembly
  - Refueling, rendezvous, and docking in radiation environment
  - Disposal of "end-of-life" engines
- **Technology Test Bed and "Dress Rehearsal" for Mars**
  - Interplanetary mission "in miniature" requiring major impulsive maneuvers and multiple engine restarts
  - Reduced performance requirements: ΔV, flight time/thrust time
  - Operations in "nearby" space environment
  - "Free Return" trajectory available without penalty

**NUCLEAR PROPULSION PROJECT**

## MARS NTR APPLICATIONS

## NTR TECHNOLOGY

- PAST ACCOMPLISHMENTS
- "STATE-OF-THE-ART" PROJECTIONS
- TECHNOLOGY CHALLENGES AND NEEDS

NUCLEAR PROPULSION PROJECT

**ROVER/NERVA PROGRAM**  
**SUMMARY**

- 20 REACTORS DESIGNED, BUILT, AND TESTED BETWEEN 1955 AND 1973 AT A COST OF APPROXIMATELY \$1.4 BILLION. (FIRST REACTOR TEST: KIWI-A, JULY 1959)

- DEMONSTRATED PERFORMANCE

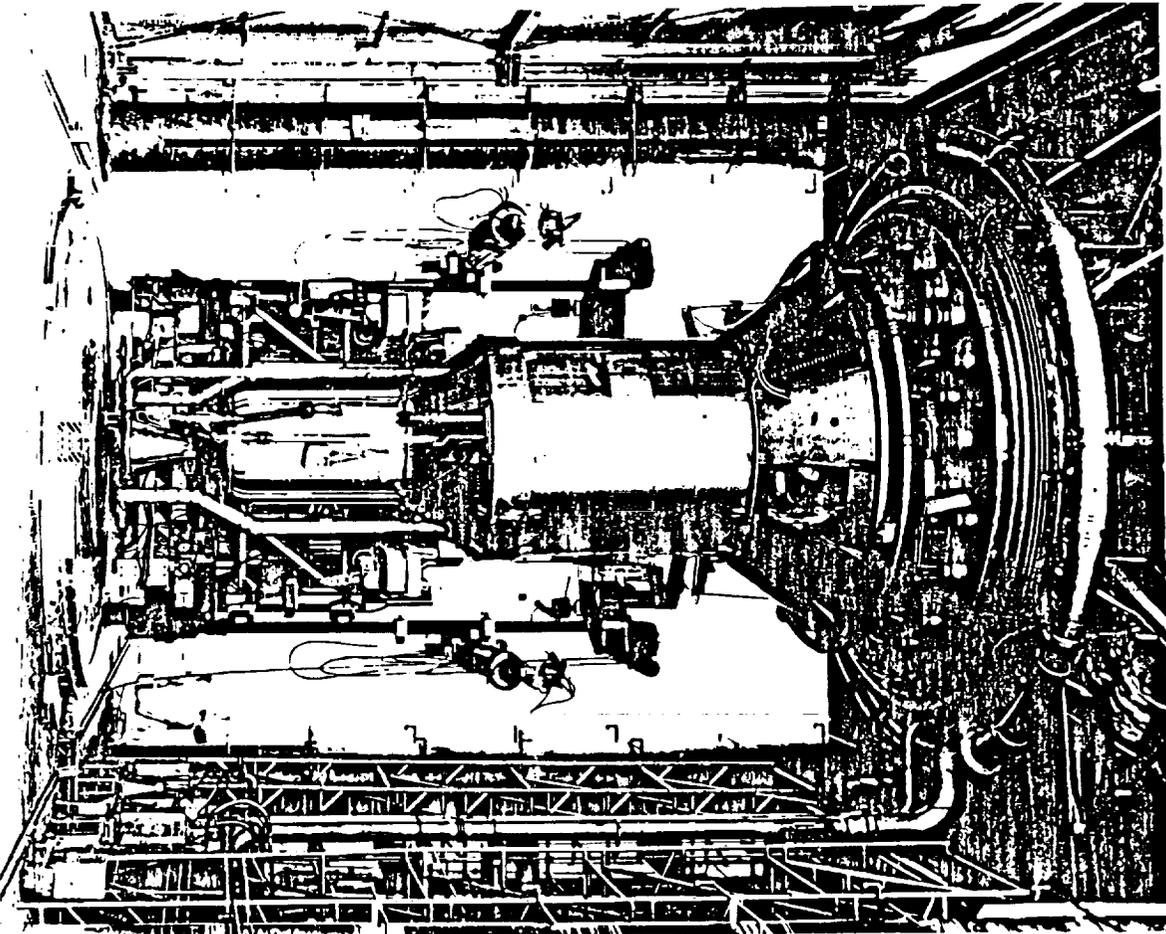

POWER (MWt)	-1100 (NRX SERIES) - 4100 (PHOEBUS -2A)
THRUST (klbf)	-55 (NRX SERIES) - 210 (PHOEBUS -2A)
PEAK/EXIT	
FUEL TEMPS. (K)	-2750/2550 (PEWEE)
EQUIV. SPECIFIC IMPULSE(S)	-850 (PEWEE)
BURN ENDURANCE	1-2 HOURS
- NRX-A6	62 MINUTES AT 1125 MWt (SINGLE BURN)
- NUCLEAR FURNACE	109 MINUTES ACCUMULATED (4 TESTS) AT 44 MWt
START/STOP	28 AUTO START-UPS/SHUTDOWNS WITH XE

- BROAD AND DEEP DATABASE ACHIEVED/USED IN PRELIMINARY NERVA "FLIGHT ENGINE" DESIGN (1972)

- ANTICIPATED PERFORMANCE

BURN ENDURANCE	-10 HOURS (DEMONSTRATED IN ELECTRIC FURNACE TESTS AT WESTINGHOUSE)
SPECIFIC IMPULSE	UP TO 925s (COMPOSITE)/UP TO 1020s (CARBIDE FUELS)

SPACE EXPLORATION INITIATIVE OFFICE

SPACE EXPLORATION INITIATIVE OFFICE

**NON-NUCLEAR ENGINE COMPONENTS - PERFORMANCE COMPARISON**

**-SSME vs. 72 NERVA vs. "STATE-OF-THE-ART" COMPOSITE NTR-**

• **HYDROGEN TURBOPUMPS: AN EXTENSIVE DATABASE DEVELOPED SINCE NERVA SHOULD ALLOW SIGNIFICANT REDUCTIONS IN WEIGHT, INCREASES IN RELIABILITY AND REDUCED DEVELOPMENT TIME FOR NTR APPLICATIONS**

- SSME: 72.6 KG/S @ 7040 PSI, 350 KG TOTAL MASS
- NERVA: ~ 40 KG/S @ 1360 PSI, 243 KG TOTAL MASS
- "SOTA" NTR: ~ 37 KG/S @ 1627 PSI, 304 KG TOTAL MASS

• **NOZZLE DESIGN AND COOLING: TYPICAL NOZZLE DESIGNS NOW CAPABLE OF ~ 98% THEORETICAL EFFICIENCY WITH PERFORMANCE SIGNIFICANTLY GREATER THAN THAT USED ON NERVA**

- SSME: T<sub>ex</sub> ~ 3116°K, P<sub>c</sub> ~ 3150 PSI, HEAT FLUX CAPABILITY ~ 16.4 KW/CM<sup>2</sup> (HYDROGEN REGENERATIVE COOLING), NOZZLE MASS ~ 600 KG
- NERVA: T<sub>ex</sub> ~ 2350-2500°K, P<sub>c</sub> ~ 450 PSI, HEAT FLUX CAPABILITY ~ 4.1 KW/CM<sup>2</sup>, NOZZLE MASS ~ 1050 KG (UNCOOLED GRAPHITE EXTENSION FROM ~ 25:1 TO 100:1)
- "SOTA" NTR: T<sub>ex</sub> ~ 2500-3100°K, P<sub>c</sub> ~ 1000 PSI, HEAT FLUX CAPABILITY ~ 6.5 KW/CM<sup>2</sup>, NOZZLE MASS ~ 440 KG (UNCOOLED CARBON/CARBON EXTENSION FROM ~ 150:1 TO 500:1)

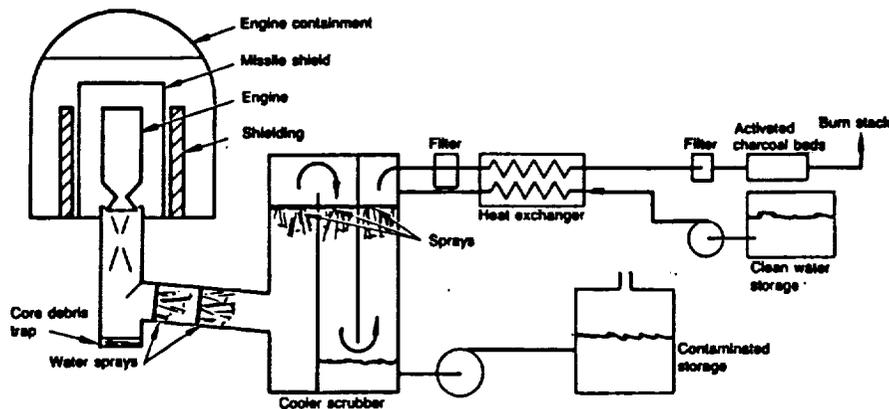

NUCLEAR PROPULSION PROJECT

**ELEMENT: NUCLEAR THERMAL PROPULSION**

**I. TECHNOLOGY NEEDS: TO DEVELOP THE TECHNOLOGIES NECESSARY FOR FLIGHT QUALIFIED NUCLEAR THERMAL PROPULSION SYSTEMS TO SUPPORT SEI MISSIONS**

- TARGETS:**
- **HIGH PERFORMANCE (HIGH  $T_{ex}$  AND  $I_{sp}$ )**
    - REDUCED IMLEO (LESS PROPELLANT REQUIRED)
    - HIGHER PAYLOADS
    - REDUCED TRANSIT TIMES
    - MISSION FLEXIBILITY
- } for given propellant loading
- **SAFE, RELIABLE OPERATIONS**
    - AUTONOMOUS ROBOTIC OPERATIONS
    - MAN-RATED SYSTEMS
    - IMPROVED RETURN-TO-EARTH OPTIONS
  - **RADIATION-HARDENED EQUIPMENT**
    - ELECTRONICS
    - TURBOPUMPS, VALVES, ...
    - NOZZLES
    - SHIELDING
  - **FULL SYSTEM GROUND TESTING**
    - TECHNOLOGY VALIDATION - FLIGHT QUALIFICATION

NUCLEAR PROPULSION PROJECT

NUCLEAR PROPULSION PROJECT

**ELEMENT: NUCLEAR THERMAL PROPULSION**

**III. "STATE-OF-THE-ART" ASSESSMENT**

- REACTOR FUELS:
  - FULL SYSTEM TESTING TO 2500°K (850 SEC  $I_{sp}$ ) FOR FULL OPERATING LIFE AND MULTIPLE CYCLES WAS COMPLETED IN NERVA/ROVER PROGRAM (CIRCA 1970)
  - COMPOSITE FUEL (2500-2900°K) TESTED IN NUCLEAR FURNACE TO 2450°K (2750°K FOR 10 HRS/60 CYCLES IN ELECTRIC FURNACE TESTS - CIRCA 1972)
  - BINARY CARBIDE FUEL (2900-3300°K) TESTED IN NUCLEAR FURNACE TO 2450°K, FURTHER TESTS/FUEL ELEMENT DESIGN WORK REQUIRED
  - TERNARY CARBIDE FUEL (3300-3500°K) HAVE BEEN PROPOSED BUT NOT VERIFIED
  
- NOZZLES:
  - NOZZLE TECHNOLOGY HAS IMPROVED SIGNIFICANTLY COMPARED TO NERVA DESIGNS. (E.G., SSME CAN ACCOMMODATE EXHAUST TEMPS >3100°K AND NOZZLE HEAT FLUXES 4 TIMES GREATER THAN IN NERVA)
  - UNCOOLED CARBON COMPOSITE NOZZLE SKIRTS ARE USED ON SMALLER NOZZLE APPLICATIONS. MUCH ENGINEERING/ VALIDATION IS REQUIRED FOR SIZES PROPOSED
  
- TURBOPUMPS:
  - 3000-7000 PSI SSME TURBOPUMP REPRESENT THE SOA FOR TURBOPUMP TECHNOLOGY. COMPOSITE ROTOR COMPONENTS HAVE BEEN PROPOSED, BUT NOT VALIDATED

NUCLEAR PROPULSION PROJECT

ELEMENT: NUCLEAR THERMAL PROPULSION

IV. TECHNOLOGY PERFORMANCE OBJECTIVES

• INNOVATIVE CONCEPTS

<u>CLOSED CYCLE GAS CORE</u>	-10,000K	1500- 3000
<u>OPEN CYCLE GAS CORE</u>	20,000K	3000- 5000

- TURBOPUMPS: HIGH PRESSURES (~500-1000 ATMS) REQUIRED FOR CRITICALITY WILL REQUIRE TECHNOLOGY ADVANCES BEYOND SSME
- MATERIALS: LIGHTWEIGHT, HIGH STRENGTH PRESSURE VESSEL MATERIALS TO IMPROVE ENGINE THRUST-TO-WEIGHT PERFORMANCE
- NOZZLES: TRANSPIRATION-COOLED NOZZLE DESIGNS TO ENABLE HIGH-ISP OPERATION
- LIGHTWEIGHT, HIGH TEMPERATURE RADIATORS TO ALLOW HIGH ISP OPERATION AND IMPROVE ENGINE THRUST-TO-WEIGHT

NUCLEAR PROPULSION PROJECT

SYNERGY WITH OTHER TECHNOLOGY AREAS

- CHEMICAL ROCKET SYSTEMS  
EX: HYDROGEN TURBOPUMPS  
REGENERATIVELY-COOLED NOZZLES
- LIGHTWEIGHT, HIGH STRENGTH CRYOGENIC TANKS  
EX: AL/LI, COMPOSITE MATERIALS
- CRYO FLUID SYSTEMS  
EX: LH<sub>2</sub> STORAGE AND TRANSFER
- THERMAL PROTECTION  
EX: LIGHTWEIGHT SUPER-MLI ("SUPERFLOC")  
REFRIGERATION } TO REDUCE/  
ELIMINATE LH<sub>2</sub>  
BOILOFF
- "SLUSH HYDROGEN" TECHNOLOGY BEING PURSUED IN NASP PROGRAM CAN IMPROVE PERFORMANCE BY REDUCING TANK VOLUME AND MASS
- "DUAL MODE" NTR OPERATION - LOW LEVEL POWER PRODUCTION (~ 50 kWe) FOR REFRIGERATION MAY LEAD TO MORE "ROBUST" NTR VEHICLE

NUCLEAR PROPULSION PROJECT

**FOCUSED TECHNOLOGY: NUCLEAR PROPULSION  
SUMMARY**

---

• **IMPACT:**

- Nuclear Propulsion Enables and/or Enhances Space Exploration Missions

**Enables:**      Nuclear Electric Propulsion (NEP)  
                    Robotic Science Missions

**Enhances:**    *Lunar & Mars Cargo, & Mars  
                            Piloted Space Exploration*

**Nuclear Thermal Propulsion (NTP)**  
Mars Piloted  
*Lunar & Mars Cargo, Lunar Piloted &  
Robotic Science Space Exploration*

• **USER COORDINATION:**

- Exploration Studies Identify Nuclear Propulsion as a Key Technology
- OAET/RZ - Provide Performance Predictions for NASA Studies
- OSSA Study on NEP for Robotic Science Missions
- DOE, DoD & NASA Included on Steering Committee (also Astronaut Office)

• **TECHNICAL REVIEWS:**

- Interagency Design Review Teams will Periodically Review Technical Progress

• **OVERALL TECHNICAL AND PROGRAMMATIC STATUS:**

- High Priority Technology Areas Identified (some efforts initiated)
- Budget Deliberations Continue
- Single Multi Agency Plan Defined for FY92 Implementation

• **MAJOR TECHNICAL/PROGRAMMATIC ISSUES:**

- Agency/Department Roles
- Funding to Initiate Technical Efforts
- Projected Budget Does Not Support Schedules

**NASA**

**NUCLEAR PROPULSION PROJECT**

NUCLEAR THERMAL PROPULSION WORKSHOP RESULTS

- 17 NTR CONCEPTS WERE PRESENTED FOR EVALUATION AT THE NTP WORKSHOP SPONSORED BY LERC/NASA HEADQUARTERS (JULY 10-12, 1990)

SOLID CORE SYSTEMS

- NERVA
- NERVA-DERIVATIVE
- PARTICLE BED
- PELLET BED
- CERMET REACTOR
- WIRE CORE REACTOR
- ADVANCED DUMBO
- TUNGSTEN/H<sub>2</sub>O REACTOR
- LOW PRESSURE CORE
- FOIL REACTOR

LIQUID CORE SYSTEMS

- LIQUID ANNULAR CORE REACTOR
- DROPLET CORE REACTOR

GAS CORE SYSTEMS

- VAPOR CORE REACTOR
- CLOSED CYCLE "NUCLEAR LIGHT BULB"
- OPEN-CYCLE "POROUS WALL" REACTOR

HYBRIDS/IN-SITU PROPELLANT CONCEPTS

- DUAL MODE NTR
- NIMF

SPACE EXPLORATION INITIATIVE OFFICE

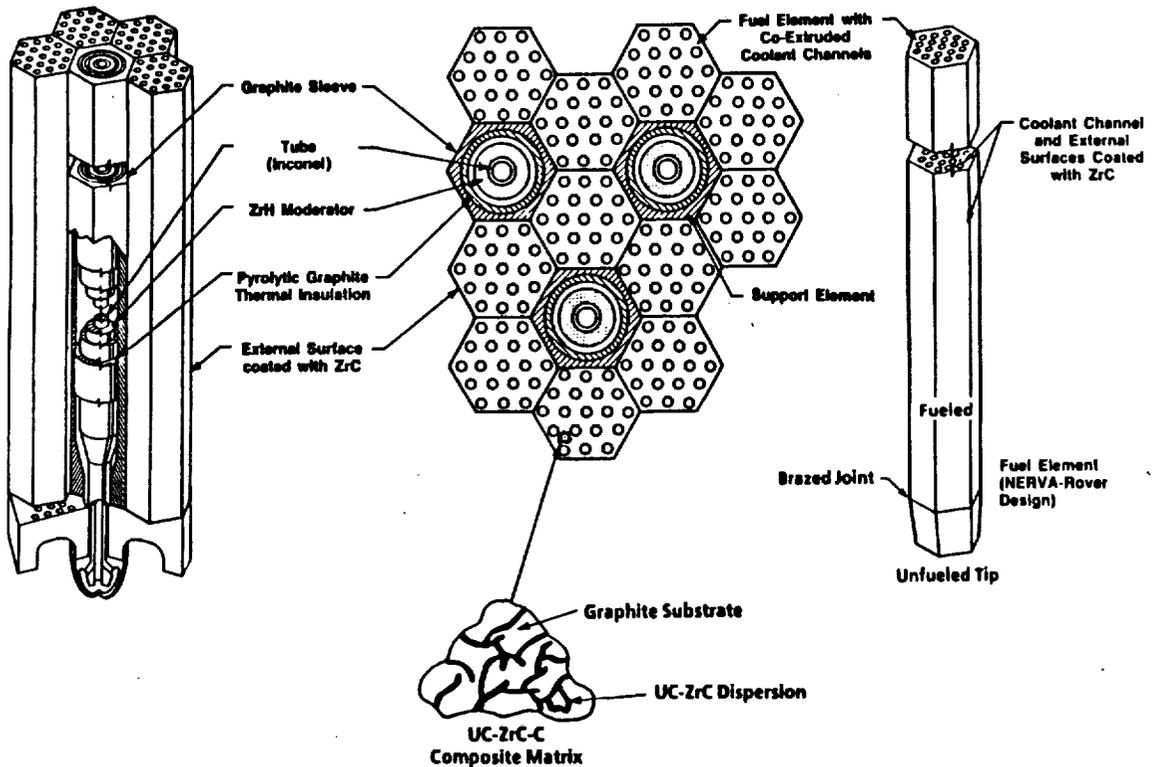

SOLID CORE NTR CONCEPTS

- **ROVER/NERVA**
  - PARTICLES OF COATED URANIUM CARBIDE (UC<sub>2</sub>) ARE DISPERSED IN A GRAPHITE MATRIX WITH HEXAGONALLY SHAPED FUEL ELEMENTS PRODUCED USING AN EXTRUSION PROCESS. GRAPHITE FUNCTIONS AS BOTH HEAT EXCHANGER AND MODERATOR.
  - ELEMENTS HAVE 19 AXIAL COOLANT CHANNELS COATED WITH CARBIDES OF NIOBIUM (NbC) OR ZIRCONIUM (ZrC) TO PREVENT HYDROGEN/GRAPHITE REACTION
  - FUEL ELEMENTS CLUSTERED TOGETHER TO FORM A GRAPHITE CORE WITH EACH ELEMENT PRODUCING ~ 1 TO 1.25 MWt. SIX ELEMENT CLUSTERS WERE SUPPORTED BY AN UNFUELED TIE ROD/TUBE TUBE ELEMENT.
  - HIGHER TEMPERATURE "COMPOSITE" AND "CARBIDE" FUEL ELEMENT DESIGNS TESTED IN THE NUCLEAR FURNACE TEST BED REACTOR NEAR THE PROGRAM END

SPACE EXPLORATION INITIATIVE OFFICE

# NDR - BASED ON PROVEN NERVA/ROVER REACTORS

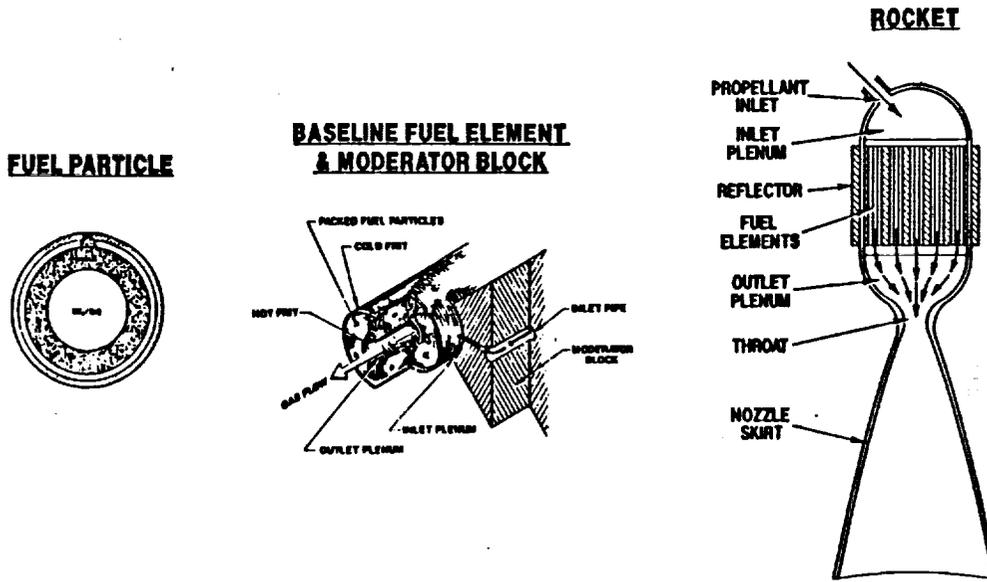

**NASA**

**LEWIS RESEARCH CENTER**

## SOLID CORE NTR CONCEPTS

- **PARTICLE BED REACTOR (PBR)**
  - COMPACT HIGH POWER DENSITY CONCEPT PROPOSED BY BROOKHAVEN NATIONAL LABORATORY (BNL)
  - UTILIZES DIRECT COOLING OF SMALL (500-700  $\mu\text{m}$  DIAMETER) COATED PARTICULATE FUEL (CPF) BY THE HYDROGEN PROPELLANT
  - THE CPF IS PACKED BETWEEN TWO CONCENTRIC POROUS CYLINDERS, CALLED "FRITS" WHICH CONFINE THE PARTICLES, BUT ALLOW COOLANT PENETRATION.
  - ANNULAR FUEL ELEMENTS ARE ARRAYED IN CYLINDRICAL MODERATOR BLOCK TO FORM PBR CORE
  - COOLANT FLOW IS RADIALLY INWARD, THROUGH THE PACKED BED AND AXIALLY OUT THE INNER ANNULAR CHANNEL
  - HIGH HEAT TRANSFER SURFACE AREA AND BED POWER DENSITIES OFFER POTENTIAL FOR SMALL, LOW MASS NTR SYSTEMS WITH HIGH THRUST-TO-WEIGHT CAPABILITY

# SCHEMATIC REPRESENTATION OF A PARTICLE BED REACTOR BASED ROCKET CONCEPT

**NASA**

**LEWIS RESEARCH CENTER**

## SOLID CORE NTR CONCEPTS

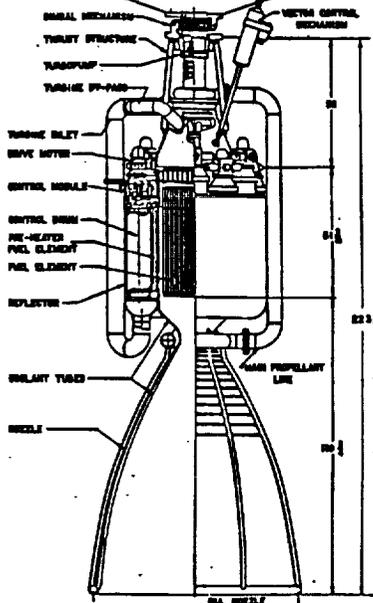

• **CERMET REACTOR**

- TECHNOLOGY INVESTIGATED/DEVELOPED BY GE/ANL DURING 1960'S FOR THE ROVER PROJECT AND THE AIRCRAFT NUCLEAR PROPULSION PROGRAM
- FUEL IS 60% UO<sub>2</sub>/40% TUNGSTEN, HIGHLY ENRICHED IN A FAST REACTOR CONFIGURATION/~163 HEX-SHAPED FUEL ELEMENTS
- FUEL ELEMENT IS CLAD WITH TUNGSTEN-RHENIUM PROVIDING RETENTION OF FISSION PRODUCT GASES
- FUEL SPECIMEN TESTS CONDUCTED UP TO ~2800 K
- SPECIFIC IMPULSE: 832 s WITH CAPABILITY IN THE 800-900 s RANGE  
/ENGINE THRUST-TO-WEIGHT RATIO: ≤5

ROBOTIC SCIENCE MISSIONS

**FUTURE CANDIDATE DEEP SPACE MISSIONS  
UTILIZING NUCLEAR ELECTRIC  
PROPULSIONS**

- NEPTUNE ORBITER/PROBE
- PLUTO/CHARON ORBITER/PROBE
- URANUS ORBITER/PROBE
- COMET NUCLEUS SAMPLE RETURN (a.k.a. ROSETTA)
- JUPITER GRAND TOUR
- MULTIPLE MAIN-BELT ASTEROID RENDEZVOUS
- INTERSTELLAR PROBE

## NEP Lunar Cargo Mission

- Cargo missions: minimize propellant mass by allowing trip time to vary
- Groundrules
  - Total mass required for 5 year mission
  - 58 MT (LEV and cargo) to LLO per year
  - Compare to 90-day study Chem/AB vehicle
- NEP vehicle
  - One mission to Moon and back per year
  - Return to LEO empty for refurbishment and resupply
  - 10 kg/kWe assumed as specific mass

Optimized Case

Optimal Power  
Optimal Isp

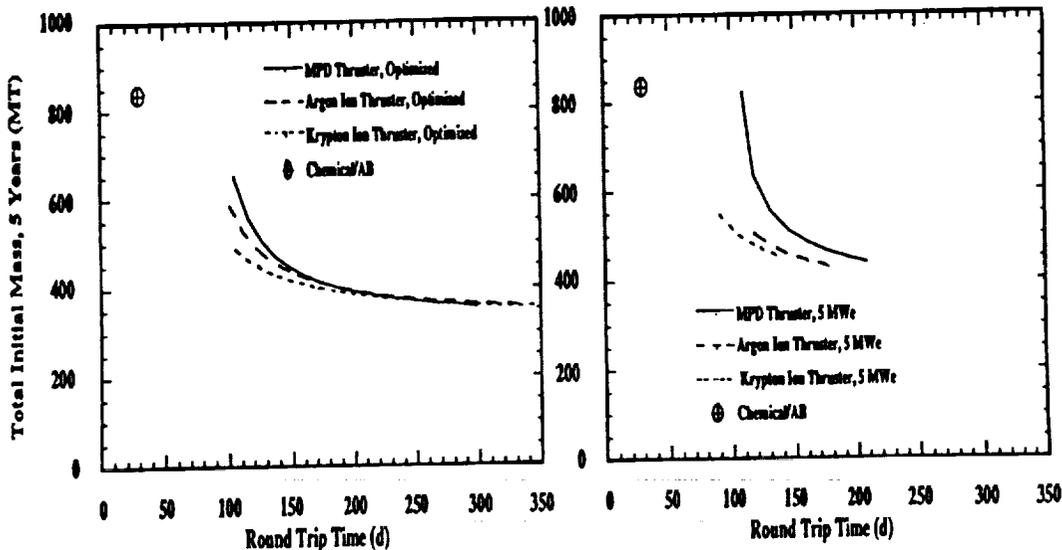

Modular Case

Common 5 MWe  
Vary Isp to obtain trip time

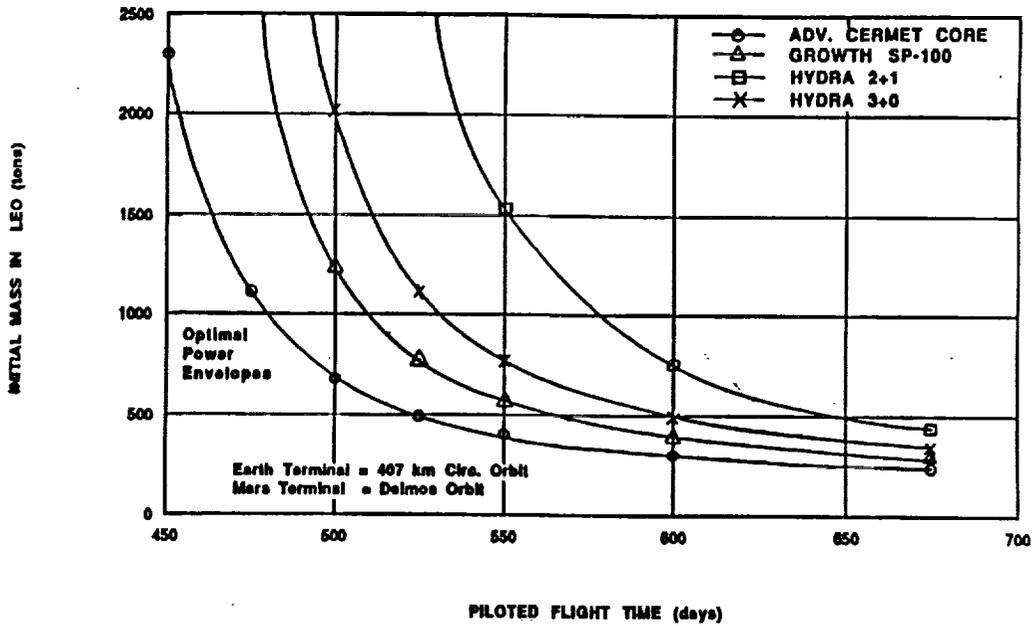

## NEP Lunar Cargo Vehicle Mission Performance

"Optimized" Case: Specific Impulse and Power optimized for minimum mass

"Modular" Case: Fixed 5 MWe power, varying specific impulse

## SPACECRAFT ON-BOARD PROPULSION

### FOCUSED TECHNOLOGIES

#### INTRODUCTION

- **FOCUSED TECHNOLOGY PROGRAMS PROPOSED FOR:**
  - **PLANETARY DUAL-MODE RETRO & "DELTA V"**
  - **SPACE STATION DRAG MAKEUP**

## SPACECRAFT ON-BOARD PROPULSION

### PLANETARY DUAL-MODE PROPULSION

#### CONCEPT

- **NTO/N<sub>2</sub>H<sub>4</sub>, 100LBF-CLASS ROCKET(S) FOR MAJOR RETRO & "DELTA V"**
- **N<sub>2</sub>H<sub>4</sub> 1LBF-CLASS ROCKETS FOR ACS**
- **SINGLE N<sub>2</sub>H<sub>4</sub> TANK FOR 100LBF & 1LBF ROCKETS**
- **LIGHTWEIGHT ADVANCED TANKS**

## TECHNOLOGY IMPACTS

### PLANETARY DUAL-MODE PROPULSION

- STUDY CONDUCTED BY JPL FOR MMII CLASS MISSION
  - CRAF USED TO QUANTIFY IMPACTS
- SPECIFIC TECHNOLOGIES EVALUATED
  - DUAL MODE (NTO/N<sub>2</sub>H<sub>4</sub>) ROCKET
  - ADVANCED PROPELLANT TANKS

## TECHNOLOGY IMPACTS

### PLANETARY DUAL-MODE PROPULSION

#### BENEFITS EVALUATED <sup>(1)</sup>

- INCREASED SPECIFIC IMPULSE (308 → 325)
  - REDUCED RESERVE REQUIREMENTS
  - REDUCED TANKAGE
    - ELIMINATE MONOPROPELLANT ACS TANK
    - REDUCED VOLUME & MASS
  - NON QUANTIFIED
    - CONTAMINATION REDUCTIONS
- WET MASS SAVING OF 283KG ESTIMATED FOR DUAL-MODE CONCEPT
  - SIGNIFICANT CONTAMINATION BENEFITS VIA SWITCH TO N<sub>2</sub>H<sub>4</sub>

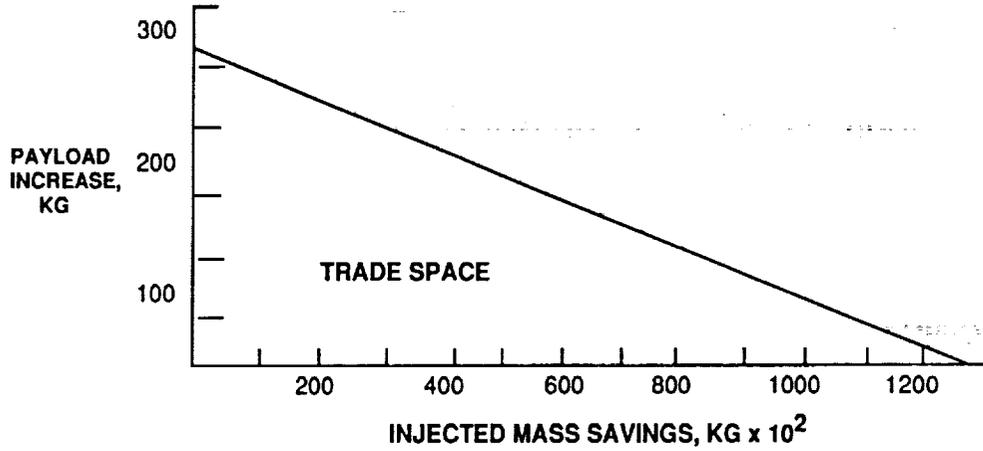

*320 SCA  
330 prob. b/l  
JRC*

(1) CRAF USED FOR QUANTIFICATION

# TECHNOLOGY IMPACTS

## PLANETARY DUAL-MODE PROPULSION

### PAYLOAD MASS VS INJECTION MASS TRADE

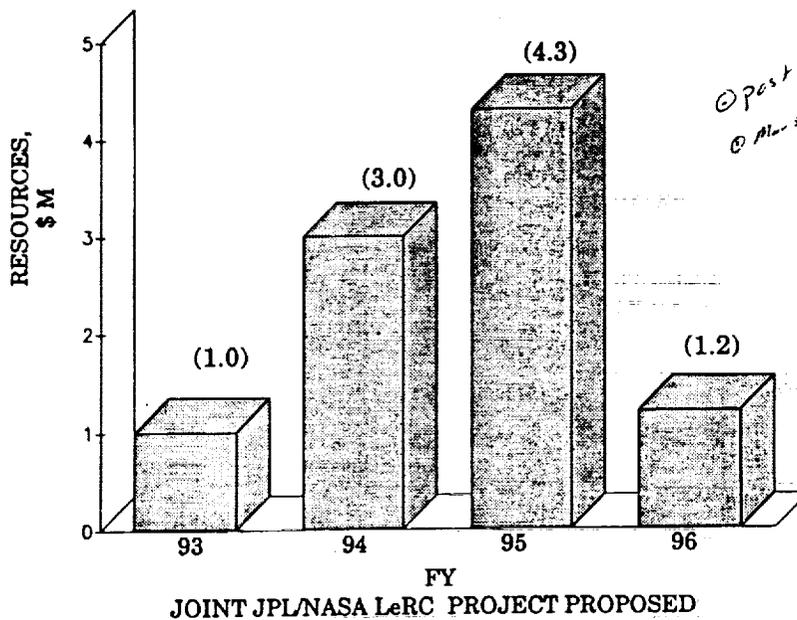

#### DUAL MODE ENABLE SAVINGS UP TO:

- 283KG PAYLOAD
- 1285KG INJECTED MASS
- OR COMBINATION OF BOTH

*(-2000 kg wet mass)*

Commercial Vehicle Propulsion

514-81  
157481  
p. 5

**Objective**

Develop and validate technology, design tools and methodologies to enable the low cost commercial development and operational use of hydrogen and hydrocarbon fueled liquid engines, low pressure booster engines and hybrid engines.

**SCHEDULE**

- 1993 - Complete analytical studies
- 1995 - Altitude Ignition and low weight pressurization technology verified
- 1996 - Low cost manufacturing processes demonstrated  
- Low cost, low pressure rise turbomachinery demonstrated  
- Performance / manufacturing tolerance relationship verified  
- Hybrid combustion processes verified
- 1997 - Low cost, reliable O2/H2 and O2/HC systems demonstrated

**RESOURCES**

	STRATEGIC	CURRENT	3-X
• 1993	\$ 8M	-0-	2.8M
• 1994	\$10M	-0-	6.6M
• 1995	\$30M	-0-	11.5M
• 1996	\$40M	-0-	16.0M
• 1997	\$30M	-0-	18.6M

**PARTICIPANTS**

- Marshall Space Flight Center  
Lead Center-technology acquisition, component level verification, system level verification
- Lewis Research Center  
Participating center-technology acquisition, component level verification

TRANSPORTATION TECHNOLOGY  
EARTH-TO-ORBIT TRANSPORTATION

LOW COST COMMERCIAL TRANSPORT

**ELEMENT OBJECTIVE:** DEVELOP AND VALIDATE TECHNOLOGIES WHICH SHOW PROMISE FOR SIGNIFICANT REDUCTION IN THE COST OF MANUFACTURING, CHECKOUT AND OPERATION OF COMMERCIAL LAUNCH VEHICLES AND UPPER STAGES WHILE PROVIDING IMPROVEMENTS IN SYSTEM RELIABILITY AND AVAILABILITY (REDUCED TURN AROUND TIME)

TWO KEY AREAS OF CONSIDERATION

TECHNOLOGIES NOT BEING PURSUED IN OTHER ELEMENTS OF SPACE TECHNOLOGY PROGRAM

- TAILORED TO A COMMERCIAL NEED
- CURRENTLY BEING EVALUATED UNDER INDUSTRY SPONSORSHIP
- NASA CAPABILITIES/FACILITIES CAN CONTRIBUTE
- MAY PROVIDE ALTERNATE TECHNOLOGY TO MEET NASA NEEDS

APPLICATION (TRANSFER) OF NASA DEVELOPED TECHNOLOGIES TO MEET SPECIFIC COMMERCIAL NEED

- DEFINITION OF INDUSTRY-UNIQUE REQUIREMENTS
- VERIFICATION IN COMMERCIAL SYSTEM ENVIRONMENT (NASA OR INDUSTRY TEST BEDS)
- MAY PROVIDE EARLY VERIFICATION OF TECHNOLOGIES FOR NASA NEEDS

HC ETOT 1 5/17

TRANSPORTATION TECHNOLOGY  
EARTH-TO-ORBIT TRANSPORTATION

LOW COST COMMERCIAL TRANSPORT

GROUND RULES:

- INDUSTRY IDENTIFIED INTEREST
- TECHNOLOGY REQUIRES SIGNIFICANT LEVEL OF DEVELOPMENT AND/OR VALIDATION AT OR NEAR FULL SCALE PRIOR TO DEVELOPMENT (NOT FLIGHT HARDWARE DEVELOPMENT ACTIVITY)
- BENEFIT FROM NASA INVOLVEMENT (NOT JUST \$)

IMPLEMENTATION APPROACHES:

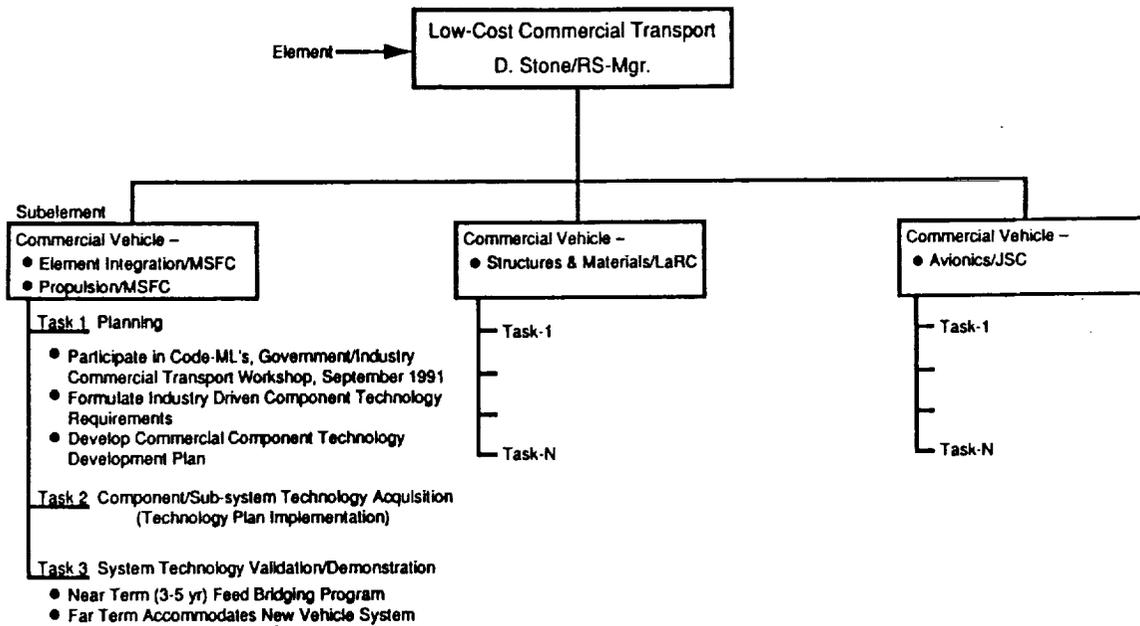

- SPACE ACT AGREEMENT BETWEEN NASA CENTERS AND INDUSTRY (NO NASA FUNDING PROVIDED DIRECTLY TO INDUSTRY)
- JOINTLY PLANNED PROGRAMS UTILIZING NASA FUNDING AND INDUSTRY IR&D (NASA RESEARCH ANNOUNCEMENT TO SOLICIT COMPETITIVE APPROACHES)

CONDUCTS:

- WORKSHOPS WITH INDUSTRY TO DISSEMINATE TECHNICAL DATA EARLY AND MORE EFFICIENTLY

HC ETOT 2 5/17

## ELEMENT LEVEL – WORK BREAKDOWN STRUCTURE CODE-RS

## LOW-COST COMMERCIAL TRANSPORT TECHNOLOGY APPROACH

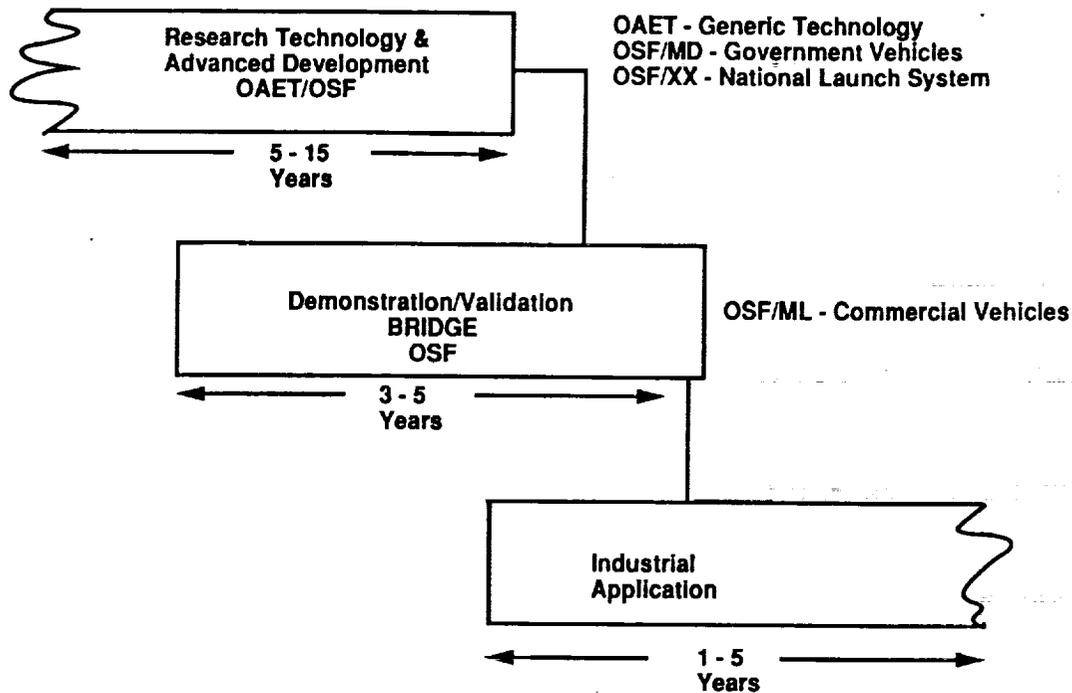

### COMSTAC REPORT RECOMMENDATIONS (October, 1990):

- 2/3 of NASA's effort for the next five years should be directed toward the development and infusion of component technology enhancements into the existing fleet of U.S. Commercial ELV's.
- 1/3 of NASA's efforts should go toward a next generation family of launch vehicles that could serve the future U.S. Commercial, Civil and Military needs; (NLS) !

### NASA's RESPONSE:

- OSF / Code-ML, proposes a 3-to-5yr, technology demonstration / validation - "Bridging" program to meet the near-term ELV enhancement objectives.
- OAET / Code-RS, will support the Code-ML Bridging Program by providing:
  - Transfer of existing (on-the-shelf) matured technologies to the private sector.
  - Accelerate relevant, on-going technology developments to comply with commercial schedule requirements.
  - Initiate new starts where required to meet the commercial needs.
- OAET / Code-RS, will work with Industry to plan and implement a comprehensive systems technology program to enable development of the "next generation" low-cost, commercial ELV's.

# FOCUSED TECHNOLOGY

## LOW-COST COMMERCIAL TRANSPORT / PROPULSION TECHNOLOGIES

### SUMMARY

---

- **Impact:**
  - Through the transfer of existing technological advancements in materials, manufacturing processes, and mechanical elements the existing cadre of O2/HC engines may be enhanced to provide improved reliability with reductions in manufacturing and operations cost.
  - Technologies that will enable the family of O2/H2 expander cycle engines will provide efficient, low-cost, reliable, robust, competitive upper stage propulsion to minimize the dollar/lb. cost to orbit.
  - Low pressure liquid booster engines (O2/HC & O2/H2) and hybrid engines will provide options and new capabilities to commercial ELV's that will reduce operations cost and improve safety and reliability while mitigating environmental effects.
  
- **User Coordination:**
  - Top level commercial needs are reasonably well understood
  - Detail technology requirements, priority, schedule, and level of maturity required, are TBD
  - Implementation strategy with other Codes is TBD
  - Coordination between NASA, USAF, DOT, and the Commercial Industry is required
  
- **Overall Technical and Programmatic Status:**
  - Code-ML's Bridging program has merit and momentum
  - Code-RS/RP will participate in the September 1991 Bridging program workshop to drive out technology requirements both near term and long range.
  
- **Major Technical / Programmatic Issues:**
  - Absence of firm technical requirements (workshop will rectify)
  - The synergy between propulsion technology elements within related ongoing programs (ETO & NLS/ADP) need to be defined in the context of the commercial requirements
  - Lack of inter- and intra-agency strategy and plan
  - There is a need to establish the scope and bounds of the Code-R participation
